PREFACE.

In the following pages are reproduced with a few terations, the Lectures on Rigveda, given by me, last or, at the University of Bombay, in connection with a post-graduate studies. My object has been just to ace in the hands of a beginner of the study of Rigveda handbook which would serve as a popular and conhandbook which would so so to er le him to enter apon nient introduction, so as to er le him to enter apon handblook. For saveral study with confidence and cheerfulness. For saveral reasons, it was not possible to do full justice to the "diject, and the treatment of the few topics which alone ald be touched upon, was bound to be cursory and I have only tried to present in an interestg and easily digestible form, the modicum of informain with which a student of Rigveds should be equip-It is hoped that the reading of these pages would Ha luce a student to know something more of Rigveda and give him the general outlook necessary to the study in the right spirit. Before concluding ... to request that this handbook to the study of , with all its imperfections, may deserve symand indulgence at the hands of the readers.

BOMBAY.

LECTURE 1.

INTRODUCTION.

General neglect of the study of Veda—why Rigveda should he studied?—not for high poetry—nor for high philosophy—hut hecause it is the sole means of knowing the history of the mind of the primitive man—the study essential for a right understanding of India even at present—the infinence of the Veda seen everywhere and at all times—the study essential for the history of the world—important from the point of view of Comparative Philology—the marvelous effect produced by the introduction of Sanskrit to Western scholars—Sanskrit elder than Greek and Latin—the contrast hetween classical Sanskrit and Vedio Sanskrit—fortuna and Ushas—some interesting facts in the hietory of words—the roots kup, ram, and s'am—neglect of the study of Rigveda least excusable under the present circumstances—the plan of the course of lectures, briefly stated.

Complaints are often made by students that the study of Rigveda is very dry and is absolutely wanting not only in interest but in utility also. This same spirit has, as a matter of fact, pervaded our Shastris and Pandits of the old school who spend their whole lives in the study of one or more branches of philosophy or sciences like that of grammar or rhetorics, but none of whom seem ever to have given even a passing thought to the understanding and exposition of the Vedas in general or of Rigveda in particular. And this spirit seems to have been handed

2

down from generation to generation, from very old times, as would appear from the fact that even Panini the oldest known grammarian, whoso Ashtadhyayi has the bonour of being regarded by the orthodox people as one of the Vedángas, or works specially intended as beips to the study of the Veda, deals with the grammar of the Vedic language only in a secondary manner, assigning a distinctly subordinate place to the Vedic idiom, as compared with the later Sanskrit. And the is the case with the modern, highly popular manual of grammar, with which every Vyákarana Shatri begins the study of the subject, and whose knowledge is quite essential to every Sanskrit scholar whether of the ancient or of the modern type, I mean, the Siddhanta-Kaumudí of Bhattojí Díkshita, wherein all the Sutras of Panini dealing with the Vedic idiom have been put together in a section by itself called the Vaidiki Prakriya, which forms the last chapter of the book, and which is studied by a very few amongst the Shistris. The class of Brahmans, known as Vaidikas, who can recite the Vedic texts from the beginning to the and, without a mistake, but who are absolutely of the meaning thereof, also testifies to the fact, that the systematic exegesis of the Veda is meglected. How and why this spirit came over the votaries of Sanskrit is a curiosity, especially when we was that in Nirukta, the oldest known work with the exegesis of the Veda, the author conhis introduction to the work, with a high of bim who understands the meaning of the Ved and a scathing censure of him who only repeats

ब्धास् ॥ ^५

What has been said so far is, of course, only generally true, as one can not shut his eyes to the work done in the field by Pandits especially during the period of special activity about the 14th century after Christ, to which I shall have an occasion to refer in a subsequent lecture.

The disappointment which falls to the lot of the present student of Veda is more due to the wrong standpoint which the student takes, than to the nature of the study itself. The antique nature of the language and the distance by which we are removed from the Vedic times no doubt contribute to make the study difficult and tedious, but these are nothing compared to the utility of the study and the interest which would follow from it, only if it is pursued in the right spirit.

Do you, young readers, come to Rigveda with the hope of finding the best and most interesting poetry therein? Then I am not surprised at the dis-

^{*} Nir. I. 18 and 10. The first two verses are looked upon as interpolations by some; but that does not affect our position.

and degree to which you are accused literature. All the same it can not be denied that the bymas of Rigveds, at least some of thom, are such as the goddess of poetry would be proud of. The freshmess and beautiful imagery which characterise the by man addressed to the Aurora, the heroic simplicity of some of the hymns addressed to the Thundering Bull, the homeliness which pervades some of the hymns to the Agni, cannot but strike the mind of a sympathetic appreciating student. Though Rigueda as a work of poetry cannot at all stand comparison with best sam-Sanskrit classical poctry, still it has something in lable in it which cannot be lightly passed over. The charms of Vasantasená, the heroine of Mrichcha-Kanka may no doubt be highly attractive and may an unparalleled enchantment for the ordinary reader, but there still remains the indescribable sweetmen and innocence of Arya Dhúta, the married wife (company) of Charudatta, though it may appeal to very few readers.

Do you expect to find higher philosophy in ligrals? Do you wish to have cut and dry systems of thought providing answers to such questions as—who

anoughes execuseed to solve a buttledist brobidit of life are absent from the Rigvoda. The philosophy of the Rigvoda proper, if philosophy it can be called, is much more practical; give and take is the idea frequontly mot with. The Rishis with their frankness and straightness, promise to offer sacrifices to gods, provided they in return bostow on them cuttle and long life, war-like sons and riches. Did I not bring to thee an offering of my prayors and oblations? Then why dost thou, Oh god, abstain from conforring on mo long life and a continuity of sons ?-asks the Rishi of a god more than once. These few hymns of the Rigveda which distinctly smack of the philosophic mood and attempt to solve the riddle of life, are an exception and strike one as unvodic in charactor; and from the point of view of language and syntax, such hymns have been new authoritatively declared to be later in character, which form, as it were, the connecting links of the earlier Vedic thought with its lator phase culminating in the Upanishads; and it must be stated here, that even those latter are far from having one particular system of philosophy. Thus, it is no wondor, if those who are familiar with the close and technical reasoning of Nyáya works, or with the flowing and lucid argumentation of Vedantists like Sankaráchárya, would, on opening the pages of the Rigveda, turn away their faces, through sheer disappointment.

Then, why should you study Rigveda? Because it is the sole means of knowing the history of the mind of primitive man. Rigveda is the oldest record of the Aryans whose immediate descendants we are. It belongs to a period thousands of years removed from us, of which no records, no monuments in any form whatsover are available. It is a great fortune that the Rigreda though so old and voluminous in extent has been preserved to us in a form correct to a syllable by crai tradition in our country. In Rigveda, we are face to face with our ancestors, we see how they behaved, how they spoke, how they thought, what simplicity and improvence flowed from their hearts, what religion and with they professed, how they worshipped their gods, what were their ideals, whether they cheerily longed for the life they lived or waited to run away therefrom, only to enjoy the superior pleasures of Paradise, w to return into that divine essence from which this the only separated them for a while, or to see themselves reduced to the same nothing from which they came to existence in this world.

But it may be asked, let the student of antiquity read Rigreda; why should every Sanskrit student be compelled to study it? It may interest him who a natural aptitude for antiquarian research; but that is no reason why it should be included in the corriculum meant for the general student. To these particulum meant for the general student. To these

essential to a student of antiquity, but it is equally or even more essential to the student of India as it stands at present. The study of Rigveda, I repeat, is absolutely necessary for a right understanding of India and her history even to-day. Our civilization from times of eld down to the present day is one homogeneous whole and some elements peculiarly Indian have been so indissolubly associated thorowith, that even our ancester of the Vedic days, if he were to rise up once more te-day, will have many things in us which he may easily The Indian mind is the same in many recegnize. respects, whether in the Vedic Age or in the 20th contury A. D. If it be asked what that unifying principlo is which runs through all the several aspects of Indian life and temperament, we reply, it is the influence of the Veda and the Vedle Age, which has permeated all strata of Indians and which is soon in every little act of ours. Whether it be religion, whether it be philosophy, merals, literature or social habits, we detect everywhere its presence. Our religious ceremenios may have become mere claberate and artificial and semetimes farcical in character, still we can not lese sight of the basis of the Veda. We can not open an Indian book without being thrown back on an earlier authority which is the Vedn, and which is regarded as the basis of all our knowledge, both sacred and prefune. The delicate peetry of Kalidasa, the philosophical vigour of Kapila, the voluptuous mysticism of Jayadeva and the opic simplicity of Vyása and Válmíki, all these admirable in themselves, would, however, fleat before our eyes like the mirage of a desert, unless they are provided with the historical background by the Vedas. So also all the systems of philosophy or Darsanas, and all codes of laws profess to impart the teaching of the Veda.

Not only is the study of Rigveda essential for the history of India, whether old or modern, it is also emential for the history of the world. To quote world the Max Müller. "In the history of the Veda fills a gap which no literary work in any other language could fill. It carries us back to times of which we have no records anywhere, and gives us the very words of a generation of men of whom otherwise we could form but the vaguest estimate by means of conjectures and inferences. As long as man contimes to take an interest in the history of his race, and me long as we collect in libraries and museums the relies of former ages, the first place in that long row of books which contains the records of the Aryan branch of mankind, will belong forever to the Rigveda."

Above all, the study of Rigveda is most important from the point of view of Philology, or the Language. The study of languages as dissibled from the mere acquisition of languages is a greath of the last century, though it must be admitted that researches into the genealogies and affinities of wards have exercised the ingenuity of numberless have exercised the ingenuity of numberless of acute and inquiring minds. Still nothing the name of science was the result of these exercised in the domain of language. There

^{*}Ancient Sanskrit Literature p. 63.

ledge restraining that liberality of inquiry which is indispensable to the growth of a science." Thus in ancient times every one thought his own dialect to be the eldest one with which to start and compare ether dialects. Until very recently Latin and Greek were supposed to be the eldest and the most primitive known languages from which every European language was derived. But the restless and penetrating investigation, which characterised the last contury, changed the whole state of affairs, and linguistic schelars busied themselves with the special relationship of the principal languages of Europe with one another and with the languages of Southwestern Asia, which led to the establishment of the Inde-European family of languages.

"No single circumstance," to quote from Whitney; again, "more powerfully aided the enward movement, than the introduction to Western scholars of the Sanskrit, the nucient and sacred dialect of India. Its exceeding age, its remarkable conservation of primitive material and forms, its unequalled transparency of struc-

[·] Language and its Study-p. 2.

[‡] Language and its Study-p. 4.

ture, give it an indisputable right to the first place among the tongues of the Indo-European family. Upon their comparison, already fruitfully begun, it cast a new and welcome light, displaying clearly their hitherto obscure relations, rectifying their doubtful etymologies, illustrating the laws of research which must be followed in their study, and in that of all other languages."

I may be excused for making another quotation owing to the importance of the subject. "What has been termed the discovery of Sanskrit by Western scholars," says Prof. Sayce, " "put an end to all this fanciful playing with words and created the science of language. The native grammarians of India had at an early period analyzed both the phonetic sounds and the vocabulary of Sanskrit with astonishing precision, and drawn up a far more scientific system of grammar than the philologists of Alexandria or Rome had been able to attain. The Dovanagari alphabet is a splendid menument of phonological accuracy and.....the Hindu Vaiyakaranas or grammarians had not only discovered that roots are the ultimate elements of language, but had traced all the words of Sanskrit to a limited number of roots. Their grammatical system and nomenclature rest upon a firm foundation of inductive reasoning and though based on the phenomena of a single language, show a scientific insight into the nature of speech which has never been surpassed."

From all this you can easily see what an important part, the Sanskrit language has played in the do-

O The Science of Language. Vol. I.p. 38.

main of the sceince of language. Now the object and alm of philology is to learn what man is by what man hus been. And Sanskrit philology in particular hassorved to supply one of the earliest and most important links in the history of mankind. Sanskrit has been regarded as a language oven older and more primitivethan Grock and Latin. At least Sanskrit enables us to have glimpses into the transactions of the South-Eastorn branch of the Aryans, as opposed to the Northwestern branch. And if Sanskrit is so important owing to its primitiveness and transparency, who rewith. onn wo begin its study if not with the Vedic idiom? The classical Sanskrit which we now know and which is accessible and intelligible to comparatively large numbers is itself a very old dialect but has been proserved to us in its pristine purity as it coased to be a language of the people in general but continued to be only a literary dialect used by the loarned alone. The Sanskrit languago is to-day what it was oxactly in thedays of Phuini, without any change of form or of significance of words. Thus even the classical Sanskrit is. the means of studying the life and manners of a very old generation.

But this is not the case with the Vedic Idiom. Though the dialect of the Veda or more particularly the Rigvoda is essentially Sanskrit still it differs from the latter in many considerable respects, so much so that to a student of classical Sanskrit pure and simple, the Vedic Sanskrit, if I may so call it, is much simpler, more regular and loss artificial that the classical

Sanskrit. The forms of declension and conjugation are more regular in character though more varied at the same time. Sandhis are simpler and far more intelligible. The Infinitive Mood, for instance, has not less than six forms in the Veda, whereas in later Sanskrit, we have only one form. All these peculiarities I shall deal with, later on in their proper place. What I want to say here is that the Vedic Sanskrit is much older than the later Sanskrit, whether the Vedicage be 2000 years before Christ or even still further removed from us; that it represents a state of civilization nowhere else represented; that it provides us with many links which are otherwise obscure, though without them no certain conclusions can be arrived at.

The truth of what has been said so far may be ildustrated by an example. Take, for instance, the modern English word 'fortune'. The word was brought by the Normans who had it in the form 'fortunc' in Northern French. It came from 'fortuna' in Latin. Now fortune in English means riches, prosperity, good fortune as well as bad fortune, chance as opposed to divine will and so on. The word in all these significations can be derived from ferre 'to bring.' One who brings good or badluck. Fors which comes from the same root and is allied to fortune was the name of an old deity in Italy, who was supposed to bring with her good or bad, was the first-born of gods and was also sometimes spoken of, as the daughter of Jupiter, Zeus, corresponding to 'Dyauh.' Now who was this deity? Was it a mere personification of some virtue or act, as Victor-Victoria, Fides-Faith and so on?

Now if we study the mythology according to the oldest Aryan records, we find that the Dawn or Aurora उपम् was one of the deities whom the most primitive Aryans known to us worshipped and praised. The Dawn, as I remarked above, is the subject of many a. beautiful hymn in the Rigveda. Now the Dawn is often described as the first-born of the bright Gods. She is called Agriya, the first who comes at the head of all the other Gods, who brings, indeed, precious gifts, namely, light and life, and who is, therefore, invoked first (prathama) at every morning-prayer (purvahutau). The same Dawn is also called the daugther of Dyaus (Zeus), duhitá Divah, and in other places, she is like Fors represented as the mother of the Gods. There are, in fact, few praises bestowed in the Veda on Ushas, the Dawn, which cannot be transferred to Fortuna, thus showing her to have been orginally, like Ushas, the bright light of each day, worshipped from the earliest days. Thus in the concept of Fors-Fortuna we cannot but recognize a reflex of the goddess of the Dawn who brings everything, who in her lap has good and evil gifts. Attempting to trace Fors or Fortuna (derived from ferre) to some Sanskrit root, we have & to bring' as the most analogous one. And Fors is quite analogous to harati or har-ti (fert). And derivatives from ह (हेणीते, हर्गति) are often used of उपस्. Thus हर्गत (adj:-beautiful, longed for) is one of the common epithets used of the Dawn.

Thus you see what a flood of light is thrown by the Vedic Sanskrit, on the relation between the Western Fortuna and the Eastern 344 and the modern English fortune. It is a long journey, indeed, from the golden

fixing firm.' Thus in Rigveda, 11-12.2, we have of Indra—' पर्वतान्मकृषिता अस्मात्'. 'He fixed firm the mountains that were in motion.' The agitation is then transferred from the sphere of the body to that of the spirit; and कोष meant mental agitation, an emotion; and as the emotion of anger agitates the mind most and commits the greatest havoc, ‡ काष came to mean 'anger' in later Sanskrit, where again we find the word used metaphorically, to denote physical agitation; as for instance कृषितो सकर्षका: if कृषित is literally used, then मकर्षका must mean काम or the god of love who alone

तत्रापि क्रोध एवालं भोक्षाविद्याय सर्वदा । येनाविष्टः धमान्हन्ति पितृश्रात्सस्हत्सस्यीच् ॥ क्रोधस्लो मनस्तापः क्रोधः संसारवन्धनम् । धर्मक्षयकरः क्रोधस्तस्मात्क्रोध परित्यज ॥ क्रोध एषं महान् सञ्जः।

^{*} Biographies of words by M. Müller.

[†] In this connection, I recommend to the reader the following verses from Adhydtma Ramayana Ayodhya Kanda 4th Adhy., verses 35, 36:—

botter than sporting or playing which causes pleasure and thus rosts the mind? And ovon in lator Sanskrit रमते preserves the old meaning as when we say 'ऋडियर' रमते चित्रम्'—So also the root सम् originally meant in the Rigvoda to toil hard, to work zealously as at a Sacrifice'—In Rigvoda II-12-14 we have, of Indra:—

''यः म्रुम्बन्तमयति यः पचन्तं यः शंसन्तं यः शशमानमृती।''

शासान is used by the side of सन्यन्तम, पचरतम् and शंसन्तम्. But as toiling hard leads to exhaustion and consequent inactivity, सम् has come to mean 'to be quiet or tranquil' (which has more to do with the mind), the result of physical toiling, its original meaning.

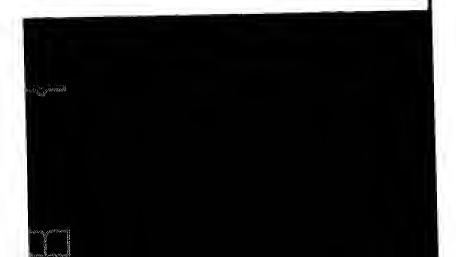

From all this it will be seen, how very important the study of Rigveda is from several points of view. It has been my object in this locture to bring home to the mind of the young student who has a natural dislike for the study of Rigveda, the fact what a gross mistake he commits, what a wrong path he pursues. Such dislike or even indifference might have been excusable in days of old when Sanskrit learning, especially Vedic learning, had remained stagnant; there was a time when even European Scholars who first set agoing the

excellent judge of ancient national poetry, says in his criticism of Sakuntalá—" Do you not wish with me that instead of these endless religious books of the Vedas, Upavedas, and Upángas, they would give us the more useful and more agreeable works of the Indians, and especially their bost poetry of every kind? It is here the mind and character of a nation is best brought to life before us, and I gladly admit that I have received a truer and more real notion of the manner of thinking among the ancient Indians from this one Sakuntalá than from all their Upanekats and Bagadams"*

But those days are now gone. The editio princeps of Rigvoda has marked a new epoch. Now Rigveda and other allied Vedic literature forms a special and important subject of study at most of the important Universities of Europe and America, an unparalleled activity in the domain of Vedic study is manifested everywhere, single words are critically studied and their history traced through all available works, iilstorical and mythologial references are attempted to be explained on a reasonable basis, indexes and glossaries are multiplied, and even exhaustive commentaries

Ancient Sanskrit Literature-p. 5.

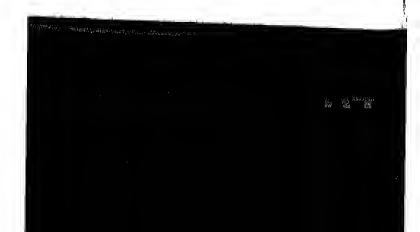

from our curriculum. Are we not best fitted by nature to understand our ancient tradition, and the spirit proper that pervades our ancient literature? Only if we make our mind free from prejudices or any preconceived notions and then apply ourselves to the study of the Rigveda, and pursue the Western methods of criticism, especially based on comparison, we are sure to arrive at the most correct and acceptable interpretation of the sacred texts. What Prof. Garbe has said regarding the Bhagavadgítá is just applicable to the study of the Rigveda. In his introduction to his translation of the Bhagavadgitá, the Professor says-' An impartial examination of the philosophical significance of the Bhag. Gitá, not influenced by any commentator, by a scholar intimately acquainted with the philosophic systems of India would be, no doubt, welcome to many.' And is it not possible to find such a scholar amongst Indians in the domain of Vedic studies?—one understanding Sayana properly, at the same time, not allowing his own judgment to be warped by the absurdities and uncritical statements that he makes, -one who can read the works in their original, at first hand, and can apply the comparative method with a spirit of inquiry open

नेहाभिक्रमनाशोऽस्ति प्रत्यवायो न विश्वते । स्वल्पमप्यस्य धर्मस्य वायते महतो भयात् ॥ B. Giba II, 40.

Thus the objection which is brought by some against the present study of Rigveda at the B.A. examination of our university, that students merely cram the translation without acquiring the critical and inquiring spirit, must not daunt you. Even the committing to memory of the translation is necessary for making your first acquaintance with the Veda. As for the method of study to be followed, I do not say anything more to-day, as the subject will be dealt with fully in another place.

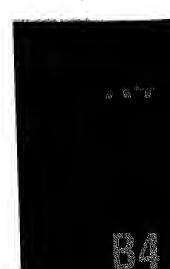

Before concluding, it would not be out of place I say a few words regarding the plan of my lectures and the principles which I would like you to bear in mind. The object of these lectures is to initiate you into the study, to show you the way and to present to you a number of facts, an acquaintance with which is quite essential for an intelligent study of the Rigveda. I shall attempt to illustrate and correborate whatever I shall say. The presentation of facts will not only be characterized by accuracy, but also by lucidity and attractiveness. Thus it will be my aim to make as popular a demonstration as possible, which is the only means to make the study both useful and interesting.

At first I shall explain to you what Veda is, and what rolation it bears to other Sanskrit Literature. I shall speak at length of the Vedic literature as opposed to Pest-Vedic literature, of its sub-divisions, and review briefly some of the important works which are representative of the period to which they belong, which are typical of the class of literature of which they form part. Then I shall speak of the Rigveda in particular, its contents, the principle of arrangement which holds together the different parts, the old and late pertions and how to distinguish them, in the course of which it will be made clear to you that Rigveda is not a book, but it is a library and a literature.

Noxt, I shall proceed to indicate the method of studying the Rigvoda, comparing the merits of the orthodox and modorn ways, boloro doing which, howover. an attempt will be made to give you an idea of the amount and nature of the work done in the field, by modern scholars, as well as, by ancient Pandits. may convoniontly be presented to you the different views hold regarding the contents of the Rigvoda and you may be left to judge for yourself, whether Rigvedn is a more babbling of primitive humanity or is the highest recontacte of most erudite tearning and recondite philosophy. Then we shall soo hew our Vodic ancestors behaved with respect to the natural forces and influencos of the world regarded by them as manifestations of superhuman will; in brief we shall see what their religion was, through what stages it passed, what gods thoy bolloved in, what myths woro woven round them. how they were developed later on. This will be followand several other interesting topics of a miscellaneous character.

After having so far dealt with the ideas and contents of the Rigveda, we shall devote ourselves to the consideration of its form. We shall notice the grammatical peculiarities of forms and inflection, showing how full and varied the inflection was in the Vedic idiom. Next the metre will deserve our attention, metre which has been a necessary and almost a constant accompaniment of poetry, and in which is clothed a very large part of Sanskrit Literature. Lastly your attention will be drawn to the several theories put forth by different: scholars regarding the age of the Rigveda, as it is determined by evidence both internal and external. be plentiabovo will All the topics referred to fully watered with textual illustrations, especially such as bear on the text prescribed. Before concluding, I may express the hope that at the end of this course of lectures I will have succeeded in pursuading you to recognize that * 'we have in the Rigveda a literature which well deserves at least in extracts to be

o 'Rigveda' by Kaegi, p. 91.

history of civilization. In this no other literature is to be compared with it, and though the esthetic value of this relie of long-vanished times has sometimes been exaggerated, yet its historical importance, its value for the history of mankind, cannot easily be overrated.'

STATE OF STREET

ś

Before we proceed to discuss the relation which Veda bears to other Sanskrit literature, let us ask ourselves the question, 'What is Veda?' No logically correct definition free from the faults of avyapti, ativyapti and asambhava can be given. To begin with, Veda means 'knowledge' from vid 'to know'; Veda means Vidya, and then secondarily the term must denote

works or granthas containing the Vidya, the most sacred and antheritative Vidya, works which do not require any external evidence, whose authority is not to be questioned, and which are the last resource in matters of dispute whether in rollgion, or philosophy or social customs etc. It would be interesting to know how the great Vedic exegetist, Sayana, tries to define Voda. In his introduction to the Veda-bháshya, Sáyana first states the prima facie case, thus* :--"If you define Voda as the last of the three kinds of evidence, perception, inference and scripture, that will not de-The definition would be too wide, as it would include the Smritis of Manu and of others. For, by universal consent, Agama or scripture is defined to be that which is an instrument of the right apprehension of things not evident to the senses. And such a definition appplies to these Smritis as well. You next propose to add 'provided it be not of human origin' and think in that way to make your definition faultless; that also will not do. For the Veda too, made as it was by Paramesvara, is of human origin. You will perhaps next say that by 'Apaurusheya' you mean 'not made by a corpored living bolng'. But this will not do. For, from such toxts as 'Sahasrasírshá purushah' it is clear that this Lord, too, has a body. But, you say, the kind of body you mean is one which is the result of the works of a previous life: The author of the Voda has no such body, and that is what you mean when you say that it is 'not of human origin'. But this also will not do. For the Vedns were produced by such living

^{*} See Handbook to Rigrada Pt. I. p. 5.

beings as Agnl, Váyu and Âditya. For we have such texts as 'The Rigveda was born from Agni, the Yajurveda from Váyu, the Sámaveda from Âditya', from which it must be recognised that Iśvara is the maker of the Vodas, as being the director of Agni and others. If you define Veda, as a collection of sayings made up of Mantras and Bráhmaṇas, that will not do; for it has not been yet definitely decided, what is a Mantra and what is a Bráhmaṇa. Thus there is no adequate definition of Veda".

To all this, Sáyana replies as follows:—"The definition of Veda, as the sum of the Mantras and Bráhmanas is a faultless one; and therefore it is that Âpastamba in his Yajña-paribháshá says—"Voda is the name given to the Mantras and Bráhmanas".

Further on, Sayana discusses the meaning of Mantra and Brahmana, as follows:*--

"But it may be said, the definition of the Veda, according to which it is the sum of Mantras and Brahmanas, is not a good definition, because no one can say what constitutes a Mantra and what a Brahmana. Not so. For the nature of both has been clearly determined in the seventh and eighth adhikaranas of the first pada of the second adhyaya. At the आधान rite the text is used 'अहे सुधिय मन्त्र में गोपाय'. Now there is no definition of what makes a Mantra. Because it is impossible to frame a definition which shall not be either too wide or too narrow. If we say that a Mantra is that which refers to a thing enjoined, we shall exclude the Mantra 'बसन्ताय कापिलां आकर्मों'

^{*} Handbook to Rigyeda-p. 84.

which is itself in form an injunction or Vidhi. If we give an etymological definition, and say that Mantra comes from Manana 'thinking', that would include the Brahmanas. If we say that a Mantra is that which ends in sift (2nd per. sing. form of six to be), that would exclude all ending in the first person forms and vice versa.

Not so. It is a good definition to say that whatever the sacrificing priest calls a Mantra is a Mantra. This denomination indicates that the texts used in reminding of the performance of a rite, and others are Mantras.

उह प्रशस्य and similar texts direct the sacrifice. अमिमीके उरोहितम and other similar texts are in praise of the gods. Ediar and the texts which follow end in the word त्वा. अम आयाहि धातचे and texts like it are invocations. Such texts as अग्रीद अभीन विहर are directory. Such texts as अधः स्विदासीद्वपरि स्विदासीद arc philosophical in character (विचारक्षपाः); and so on. Thus, since the Mantras are so very various in kind, except denomination, there is no common quality which will serve for a definition. But the need of some definition has been shown by old teachers. 'Even the rishis could not come to the end of things taken one by one: it is only when things are comprehended under a definition that learned men can master them.' So the denomination by experts or learned men (अभियक्तानाम) in the words that this is a Mantra is the definition.

In the चातुमास्य ritual, the text is used-'एतद्बाह्मणान्येव पञ्च हवींपि'—now there is no definition of what a Bráhmana is. Why? because there being no limit to the

THE PARTY OF THE P

divisions of the Voda, any definition which should sook to discriminate between the Bráhmana parts and the other parts would either be too narrow or too wide. The Mantra part of which we have already spoken, is one. The remaining parts have been thus summed up by ancient teachers—

हेतुर्निर्वन्त्रतं निन्दा प्रशंसा संशयो विश्विः । । परक्रिया प्रशक्तरं। व्यवधारण रुवना ।....

It will not do to say that to define a Brahmana wo have only to say that it must be one or other of these things just enumerated. For all these classes are found in the Mantras too....(इन्द्वी वामुबान्ति हि is बहेतू. उदानियुर्महोसित तस्माद्दशमुच्यते is a निवचत). And then there fellow illustrations from मन्त्र containing the classes on unerated.

Then there is no definition of what a Bráhmana is? There is, and we give it. We have seen reason to hold that the Voda is divided into these two parts, Mantra and Bráhmana and we have laid down how the Mantra part is to be known. Well, whatever is not Mantra, that is our definition of a Bráhmana. This very definition is given by Jaimini in the two Sútras—तन् चोदकेषु मन्त्राख्य and केने बाह्मजबाह, that is to say, in this Veda, there are certain exhertatory sentences to which the name Mantra is given by these who know tradition. We study the Mantras, they say. The rost of the Veda, they call Bráhmana.

After having showed, that what is called इसिहास, पुराण. करन, गाथा, नाराशंस्य, are only different kinds of नाहाणंड and are mentioned under distinctive names, just as for instance the परिवासक are separately mentioned

though for that roason they are not meant to be non-Bráhmaus,* he concludes—"There are therefore besides Mantra and Bráhmaua no other parts of the Voda. And we have shown how these two are to be severally defined. That definition of the Voda, then, according to which it is the sum of Mantras and Bráhmauas, is established."

Thus you see how very vague is the connection of the terms केंद्र, मन्द्र and migror, and that their denotation is only to be ascertained by tradition. Thus according to the orthodox view both the सम्बन्ध or what we shall call tiggis and the armors go by the common appellation of केंद्र, notwithstanding the wide gulf between the two in point of language, form, ideas, and general standard of civilization.

Generally spoaking, Sanskrit literature may be classed under two broad divisions-Vodic literature and non-Vodic or rather post-Vodic literature. (For in a senso overy Sanskrit work may be related to the Vedas, directly or indirectly.) The codes of law by Manu and othors, the opics, classical literature, philosophical works, commentaries and manuals, all these come under post-Vedic literature, of which a boginning is marked by the vory general prevalence of the continuous anushtubh Vodic literaturo itself may be divided into three great divisions; the Muntras or Samhitás, the Bráhmanas and the Sitras. Of these the first two, as sald above are बेंद proper, while the सम्बद are not चेंद्र but only related to Voda or exist for the sake of the Voda. Here is the place to refer to the well-known distinction between श्रुति and स्युति. मन्त्रs and ब्राह्मणंड are called श्रुति, while the

^{*&#}x27;विमगरिक्षाजकस्यायनः'

स्वाव are called स्वाति. श्वति is what is heard as opposed to what is composed or remembered. The श्वति is revealed scripture, self-evident and self-authoritative, not composed by any human authors. The श्विश of the hymns or स्वाविध सम्बद्ध, the seers of the Mantras. They are not at all responsible for the contents and thoughts of the सम्बद्ध. They are only the mediums communicating between God and men. Yáska, the oldest known expositor of the Veda, while explaining the genesis of the Nighantu on which he writes a commentary, says.

"साक्षात्कृतधर्माण ऋष्यो बश्रुष्ठः । तेऽवरेभ्योऽसाक्षात्कृतः धार्मभ्या जपदेशेन मन्त्रान्सम्यादुः । उपदेशाय ग्लायन्तोऽवरे विल्मग्राद्यापा स्वीमा जन्य समाम्नासिष्ठवैदं च वेदाङ्गानि च।"

Here it is distinctly said that up or law revealed itsolf to the rishis, who handed it down by oral instruction to their descendants to whom up did not manifest itself. This is the orthodox view; hence the extreme sacredness and importance of the and. And it can be easily soon how this view came into existence and continued to gain strength. As we know, oral tradition was the only means, in early days, of communicating learning. A teacher who learnt his entered from his preceptor taught the same orally to his pupil, and this practice continued from times immemorial naturally led to the belief that Vedas were handed down in the same manner and it was difficult to believe how they could be composed by some particular persons.

^{*} Nirukta I-20.

There, we need not refer to the view that the brahmans or priests deliberately spread the idea that the Scriptures were not not of human origin, that sinds, side and others were not the composers but merely the instruments of communication, with the object of attaching greater importance to the Vedas and maintaining their own superiority, since it rests merely on a conjecture.

No doubt, it is very curious that works like the Brahmanas, containing a good deal of chaff, from which a grain of gold is to be now and then discovered, should be classed as Srutl, on a level with the Samhitas, especially the Rik-Samhita, which contains simple and pure prayers originating from a pious and innocent heart, full of grandour and clevation. It may be partly the great antiquity and partly the love of elaborate and artificial sacrificial ritual, joined to a credulity natural to those times, that may account for the fact.

As opposed to द्वात, there is the Smriti, or traditional works, of human origin, which are solely based on the द्वातs, and which are possessed of authority, only inasmuch as they have their foundation in the द्वातिक. As Kumárila, the great मीमांसा writer remarks:—

' पूर्वियज्ञानिषयं विज्ञानं स्मृतिरुच्यते । पूर्वज्ञानाद्विना तस्याः प्रामाण्यं नायपीर्यते॥'

Thus everything contained in the स्वृति Is supposed to be confirmed by something corresponding in the श्वतिः and when there is an antagonism between the dicta of श्वति and स्वृति, well, the former provails and the Inter is to be rejected in its fuvour. 'विरोध लगमेश स्वाय-स्वि श्वतानम्'—It is to be noticed here, that the title स्वृति is applied not only to the Sútra works but also to the metrical codes of Manu and Yájňavalkya, which however, we have not included in the Vedic literature.

To come to the first or Samhltá period, we have four Samhitás of the four Vedas, Rik, Sáman, Yajus and Atharvan. Of those the Rik-Samhitá is the oldest and the most important, not only from the point of view of the contents, but even from the orthodox stand-point.

This four-fold division of the Samhitás evidently presupposed an eleborate development of the sacrificial ritual, as even the simplest sacrifice required the four principal priests होत, उतार, अन्युद्ध and महान, though the more eleborate sacrifices required not less than sixteen priests.—The following verse from Yaska's Nirukta states distinctly the functions of the four priests—

'क्रःच्यां त्यः पोषमास्ते पुदुष्वान् । गायत्रं त्यो गायति शक्यरीष्ठ ॥ ब्रह्माःत्यो वदति जातथियाम् । यज्ञस्य मात्रो षि मिमीत उत्यः॥'

The gie priest is to recite verses from the wife necompanying the offering of oblations, the sate is to chant psalms at the sacrificial ritual, from the Samaveda, the men priest is to be a general superintendent to watch everywhere and to make corrections whenever any mistakes are committed in the general routine or particular dotails of the sacrifice. The warr is thus required to be versed in all the Vodas. And the surf priest creates the very form or body of the sacrifico. All the manual labour, such as preparing the altar or वेदी, placing the logs of wood in a particular position, making the oblations &c. is the अध्वर्ध's duty. For this sway the Yajurveda which is a commixture of prese formulæ containing practical directions for the sacrifice and metrical portions, is meant. It must be noted here that originally there were only three vedas*, 死灾, सामन्, and यज्ञस्, known as वयी, but that the fourth अध्ययि

^{*} Cf. मालविकाग्निमिच—I, vorse 18— मङ्गलालङ्कृता भाति कीशिक्या यतिवेषया। त्रयी विग्रहवत्येव सममध्यात्माविग्या॥ .

which is ovidently far removed in spirit from the old Vedas, was afterwards added to the triad. Thus the three Vedas prosupposed their character of being subsidiary to the sacrifice. And from the point of view of the sacrificial ritual, the यसंबंध of the अध्यक्ष on whom falls the main burden of the sacrifice, should desorve precedence, but even orthodox belief is in favour of regarding Rigvoda as the first and of primary importance. Evon Sayana, who had first commonted on the Yajurvoda and who thon proceeded to comment on the Rigveda, has to admit that Rigycda must be given procedence in such exercises as the learning of all the four Vodas, the continual study of them and that spiritual sacrifico which consists in the recitation of them.' In the well-known Purushasukta, it is mentioned first of all-

'तस्माद यज्ञात् सर्वष्टतः मरचः सामानि जाज्ञिरे & .--'

Not only is the primacy of the Rigveda ostablished on account of its boing mentioned first; it also follows from the fact that it is the cause of strong-thening or confirming the parts of a sacrifice. Thus the Taittiriyas have the text—

'यंद्रे यज्ञस्य सामा पञ्चवा क्रियते शिथिलं तष्ट् यष्ट्रचा तष्ट्रविमाति'—

The छन्दोगड, too, rocito a spooch of Nárada's to Sanatkumára, which also implies the primacy of the Rigveda—'म्ह वेदं सगवाडाकिया यहाँवेदं सामवेदमाध्यां चेति'.

That Rigvoda is the most ancient piece of literature and most important from the point of view of study will become clear in the course of subsequent lectures, on an examination of its language, thoughts, religion and philosophy. With the arrangement of the contents of the Rigvoda in particular, I shall deal in the next lecture.

It is owing to this distance botweon Rigycda and the other Vedas that some (e. g. Max Müller in his Aucient Sanskrit Literature) have thought it nocessary to have four periods instead of three. Instead of one Mantra period they have two, the first 'छन्दस' period, and tho and मन्त्र period. The छन्दस period is the period when at first the different hymns and verses must have been first composed and given out as free and unrostrained expressions of the overflowing thoughts of the poetic Aryans. It is a creative and growing period, which was characterised by real poetry, when the spiritual or mental sacrifice was the only sacrifice, when a prayer was the most valuable offering that could be made to gods. To this period must be assigned the verses of the Rigweda as they first were given out. On the other hand the second period was one of compilation, and systematisation which saw the arrangement and grouping of the hymns in the form we have them at present. During this period, the sacrificial ritual gained dominance which is evidently the only guiding principle in the arrangement of the other Samhitás. Though from the point of view of the history of the human mind, the two periods are necessary, we have here contented ourselves with only one period for convenience and from the point of view of the literary products as we have them at present.

Thus leaving aside Rigveda, we shall now proceed to the Samaveda Samhita. In the first place, it must be stated that the Samaveda does not really soons

to be an independent production, as it has taken many verses, a very large number, indeed, from the Rigveda. As we have said above the Sama prayer book was specially intended for the same priest who was to chant the psalms at the sacrifices. The Sachlita text proper of the Samaveda consists of two parts, the व्यक्तिक and the दसराधिक. The first is divided into six lessons or gagges, each of which contains ten decades of stanzas, except the last which has only nine. quittes is also called wet, werth or werther. The verses of the genface are also classified under the five following heads—1 suffer treating of the God of fire. 2 dean treating of Indra. 3 among treating of the God of Wind. 4 आहजाम and 5 हा आपम Both treating of the supreme God, so named because these verses were proclaimed to the world by Arma, the God of Dawn, and by Sukra, the proceptor of the Asuras, respectively. The was, when chanted, are called wrong. The book of सामगढ bolonging to the प्रगाचिक is called प्रगाति : while those bolonging to the arresture constitute are and रहस्य. The poculiarity of the उत्तराश्चिक is that generally three verses are grouped together and form one war, and the first of them occurs in the griffer; and this group of verses is chanted in various ways, with the सामन् so occurring in the मञ्चाति. Honce the सामन्ड of the प्रविश्विक are called प्रवृत्ति. At the end of the प्रवृत्तिक comes the agrarefy which is considered by some as a part of the quiffus, by others as a separate work. The उत्तराधिक consists of several sections referring to the following topics in order, र ब्हाराज, क संबद्धर, 3 पिकाह, 4 अडीन. 5सम, 6 प्रायश्विम and 7 क्षप्र-

Collections of hymns arranged in a particular way, and set to music are called mas. I can not do more than refer only to the two modes of the recitation One is simple and applies to the mere of the Samaveda. or hymns which are taken from the Rigveda generally and adopts three स्तरंड, the उदास, the अनुदास and the स्वरित. The उदान is high and emphasised, the अध्यान is low and the स्वास्त occupies a somewhat middling position, thus differing from the mode of pronunciaton in the Rig-veda hymns. The other mode, the musical chanting of the सामवेद is far more elaborate and complicate and has to do with seven notes called respectively कृष्ट, प्रथम दितीय, हतीय, चतुथ पश्चम, and पष्ट, corresponding to the वश्चम, सध्यम, गान्धार, ऋवम, बद्रज, धेवस and निवाद respectively."

From the सामचेद we now pass on to the यजुवद, which is specially and solely meant for purposes of the sacrificial ritual and which is, therefore, quite different in character from the two साहताड mentioned above. The word बजुद is explained in various ways. 'आनियताक्षराब- word बजुद is explained in various ways. 'आनियताक्षराब- काने बजु: 'a Yajus is that, the number of letters in which is not fixed—'वद्यात्मको यजु:'—विगुणं पद्यामानो मन्त्रवाद्याणात्मको- बजुदेद: and the विद्यालय refers to either संदिता, वद and क्ष्म or to बदाना, अजुदान and स्वरित. This यजुदेद is two-fold, क्षक or white or pure and कृष्ण or dark. A very curious story is told about this two-fold division of बजुदेद, by सहीचर, just in the beginning of his आव्य on the manufacturer. Vyása, out of regard for the gradually degenerating intellectual powers of men, arrang-

^{*} See the verses from surquism quoted in Madras Catalogue of

ed up the बद्धs thus vomitted, assuming the form of ति-चिति birds. Thus the बद्धs became dark and were called कृष्ण and तैचितिय.

वार however was very sorry for the whole affair and worshipped the Sun, who came to him in the form of a horse (यानी) and gave him the बजुर. Hence this बजुरिय is called हाइ owing to the bright form of the Sun and बाजसभाष after the बाजी form of the Sun. All this sounds like a fable no doubt. Perhaps हाइ or pure may refer to the fact that the बाजसभाष मंहिता is free from a mixture with the बाजाज or sacrificial directions intersporsed here and there, as opposed to the हाला बजुरिय which is really a mixture of both सम्ज and बाह्मण in one.

Bhatta Bhaskara, a commontator on तेशिशियसंक्षिण however says, in his introduction—'पूर्व भगवता क्यांसन जग-

[§] The oange of anger is elsewhere (i. e. Oalentta MSS. Oat. I. p. 39) stated thus.—As asked his pupils to practise some austorities in order to make good for the magnitude, we seeing the inferiority and weakness of his fellows proposed that he should alone be entrusted with the austerities. At this He was coraged and thought him to be a despiser of the Brahmans.

हुपकाराधीमकी भूष स्थिताः वेदाः व्यस्ताः शासाश्च परिच्छित्राः। तत्र वे द्राप्यायनं नाम शिष्यं यद्ध इशासानामा थिएत्ये निसुषोज । स वे तं पार्ठ पार्चाबल्क्याय शोवाच स च तिनिरये सोऽपि च उसाय संस्थ आनेपाय क् वि
वेन पद्विभागं चके। अतश्चेयं शासा आनेपीत्युच्यते। Perhaps tire
साहिता might have been named तेतिरीय aftor tiris
तिनिरिर.

The शुक्त or बाजसनेपि संहिता of the यहवेंद which has fifteen ज्ञास्तात as कण्य, मध्यन्दिन etc. from the fifteen followers of याज्ञवल्क्य who first read them, is divided in to forty अध्यापड, each of which is again divided into short sections called काण्डिकांड, the total number of काण्डिकांड the forty sectors, amounting to 1975. The first adhyayas contain the formulas for the general sacrificial ceremonial; adhyayas 1 & 2, those for the new art cl full-moon sacrifices (दर्श and पूर्णनास); 3, for the moraling and evenlug fire sacrifice, as well as for the sacrifices to be offered every four months, at the commence ment of the three seasons; 4 to 8 for the Soma sacrifice in general, 9 & 10 for two modifications of it (वाजवेथ-राजव्ययकाङ्मन्त्राः); 11 to 18 for the construction 📀 🗜 alters for the sacred fires; 19 to 21, for the Sautramani, a coromony originally appointed to explate the evil effects of too free indulgence in the Soma drink ; 22 to 25 for the horse-sacrifice (अध्वमेष). The noxt 15 adhyáyas which follow, are of a considerably later origin and they are called by the name of खिड or supplements in the commentaries of उत्तर and महीधर. to 29, contain sacrificial formulas which belong to the coremonies treated of in the earlier adhyayas and must be supplied thereto in their proper place. The tora following adhyayas 30 to 39 contain the formulas for

entirely new sacrificial ceremonies, i. e. the प्रकासिप, the सर्वसिप ितृसेप and the प्रवासी. The last adhyaya has no sort of direct reference to the sacrificial coremonial. It is what is known as the ईशाबास्योपनिषद्.

The Sathhitá of the कुलायज्ञवेद is arranged in seven books (अहर or काण्ड) containing from five to eight lectures (अध्यय, प्रश्न or प्रवादक). Each lecture is subdivided into अवगर्क. The first अवगर्क corresponds with the first कण्डिका of the ग्रन्थ संदिता, but all the rest differ, and so does the arrangement of the subjects. Many of the topics are indeed alike in both the Sathhitás, but differently placed and differently treated. Thus the ceromony called राजदेश occupies the 8th प्रश्न of the first अवह and is preceded by the बाजोब and the mode of its celebration which occupy 14 sections in the preceding प्रश्न. Consecrated fire is the subject of the fourth and fifth books. The seventh book treats largely of the उद्योतिहास including the forms of preparing and drinking the Soma juice.§

Next we pass on to the last of the Samhitás, that of the अध्वेवेद, which is much later in origin and which thus forms the transition from the संदिताs to the बाह्यणड. The text of the अध्वेवेद consists of 20 Kándas, each काण्ड is divided into several अजुवाकs, and each अजुवाक

[§] A general idea of the contents of the unit may be had from the following quotation from Mandonell's History of Sanskrit literature, (p. 183)—

[&]quot;The religion of the Yajurveda may be described as a kind of mechanical excerdatalism. A crowd of priests conducts a vast and complicated system of external ceremonies, to which symbolical significance is attributed and to the smallest minutim of which the

THE RESERVE OF THE PROPERTY OF

The second second second

contains a number of Súktas. The contents of Kánda I. to VII. are distributed according to the number of stanzas contained in the hymns. In Kánda I. the hymns have on the average four stanzas, in II. five, in. III. six, in IV. seven, in V. oight to eighteen, in VI. three; and in VII. about half the hymns have only stanza each. Kándas VIII—XIII contain longer pieces. The contents of all these thirteen Kándas are indiscriminately intermingled.

The following five Kandas, on the contrary, are arranged according to uniformity of subject-matter. Kanda XIV. contains the stanzas relating to the wedding rite, which consist largely of Mantras from the tenth Mandala of the Rig-Veda. Kanda XV. is a glorification of the Supreme Spirit under the name of Vratya, while XVI. and XVII. contain certain conjurations. The whole of XV. and nearly the whole of XVI. moreover, are composed in prose of the type found in the Brahmanas. Kanda XVIII. deals with burial and the Manes. Like XIV. it derives most of its stanzas from the 10th Mandala of the Rigveda. XIX. consists of a.

greatest weight is attached. In this stifling atmosphere of porpotual secrifice endritual the truly religious spirit of the Rigveda could not possibly survive. Adoration of the power and beneficence of the gods, as well as the consciousness of guilt, is entirely lacking, every prayer being coupled with some particular rite aiming solely at sectioning material advantages. As a natural result, the formulas of the Yajurveda are full of dreary repetitions or variations of the same ideas and abound with half or wholly unintelligible interjections, particularly the syllable Om."

mixture of supplementary pieces. XX., with a slight exception, contains only complete hymns addressed to Indra which are borrowed directly and without any variation, from the Rigveda. The matter of this last Kanda relates to the Soma ritual and is entirely foreign to the spirit of the Atharva-Veda. It was undoubtedly added to establish the claim of the Atharva to the position of a fourth Veda, by bringing it into connection with the recognized sacrificial ceremonial of the three old Vedas.

From an historical point of view, the Atharva Veda is far more important than the Yajuryoda, hasmuch as the former is not at all liturgical in character. have an insight into the habits and customs of the masses in general. To quote Whitney, "The most prominent oharacteristic feature of the Atharvana is the multitude of incantations which it contains: these are pronounced either by the person who is himself to be benefited, or, more often by the screerer for him, and are directed to the procuring of the greatest variety of desirable ends; most frequently, perhaps, long life, or recovery from grievous sickness, is the object sought; then a talisman, such as a necklace, is somotimes given, or in very numerous cases, some plant endowed with marvollous virtuos is to be the immediate external means of the cure; further, the attainment of wealth or power is aimed at, the downfall of enemies, success ln love or in play, the removal of petty pests, and so on, even down to the growth of hair on a bald pate."

The Atharva Voda is also named Brahma-Veda, or the Veda of the Brahman priest, the general director

of the sacrificial ceremonial. That this was a mere supposition to attract greater sacredness to it, while the Brahman was supposed to know all the three Vedas, is quite clear from the fact that in most of the old books, only the three Vedas are referred to. In Aitareyas Brahmana 5-33, we have-" पद् ऋचीव ही ने क्रियते पहुणाव्यर्ण साम्नोही थे न्यारब्धा वयी विद्या भवति अथ केन ब्रह्मरनं क्रियते इति षटका विषयिति कुनाव "-Even Sayana in his introduction to the भाष्य on the अध्वयंद has a large number of passages arrayed against him, denying the character of a fourth Veda to the work. And Sayana further remarks, 'attum-िमकफलेख बर्बाद्वर्णमासादिश अपनान्ते इ त्रपीविद्धित हमेस अीनित महत्व अतन्यलभ्यावात् अथर्वदेदेकसमधिगायम् इति स्थितम् । तत्र्वेव वेडिक-प्रशानि शान्तिकपे दिकानि कर्माणि राजकर्माणि अपरिमितकलानि तुला-डरुवादिमहादानानि च अधवंवेद एव प्रातिवादितानि ।' admitting the different character of the work before

From the Mantras, now we go to the Brahmana. and it is like passing from one world to another. The Brahmanas are solely liturgical in character and pre-suppose an elaborate and most artificial development of the cult of sacrifice. All the triffing details of the sacrificial ceremonial are minutely treated and phantastic etymologies of words given with a sacredness, and significance beyond all proportion attached to them. As said above, it is impossible to distinguish logically between Mantras and Brihmanas. One must read both in order to have an idea of their nature. Haug, in his introduction to his edition of Aitaroya Brahmana, very pithily distinguishes one from the other, "That part which contains the sacred

prayers, the invocations of the different deities, the sacrificial formulas, blossings and curses pronounced by priests is called Mantra, the produce of thinking....By Bráhmana we have always to understand, that part of the Veda, which contains speculations on the meaning of the Mantras, glves procepts for their application, relates stories of their origin in connection with the sacrificial rites, and explains the secret meaning of the latter." Though their professed object is to teach the sacrifice, they allowed a much larger space to dogmatical, exegotical, mystical and philosophical speculations than to the ceremonial itself. Their characteristic feature consists in doubt, deliberation and discussion.

The Brahmans are prese works, with a queer, old style and the syntax represents the eldest stage in the development of the Sanskrit prese. Nothing can be simpler, only if you are once accustomed to it.

Not only, all the four Vedas have got their different Brahmanas, but even different Sakhas of the same Veda have different Brahmanas. The title start may be explained in several ways, either as the works written by the Brahman for the sacrificial coromonies of the Brahmanas or as works relating to the satt priest or as works dealing with start i. e. prayer or sacrifice in general. The principal known start of the Rigvoda is the Aitareya Brahmana relating to the stressment of the satisfies also called says. A ourious story regarding the origin of the work and

its title is told by Sáyaṇa in his introduction to the most on the same. There was a sage who had many wives, and one of them was named Itará. She had a son whose name was Mahidása. The father neglected him and loved the other sons more than Mahidása and at a sacrifice, he allowed all the other sons to sit on his lap, but refused the honour to Mahidása. Thereupon Itará prayed to the goddess of Earth, who appeared at once and offered a divine throne to Mahidása and seated him there. The goddess then made him a great scholar. To Mahidása Aitareya, enlightened by the boon of the goddess of Earth, there appeared or was revealed, the Bráhmaṇa and the Âraṇyaka known by the name of Aitareya Bráhmaṇa and Aitareya Âraṇyaka.

The Brahmana is divided into 8 Panchikas pentads, each of which contains five Adhyayas. the wholo work consists of 40 chapters. Hero I cannot. do more than very briefly indicate the contents of the Adhyayas 1 to 13 treat of the duties of the होति priest in the आसेष्टोम sacrifice. Adh. 14 explains the meaning of the term अतिष्टोम and several other matters. Adlı. 15 to 17 describe the उक्थ्य, पोड्श, अतिराश्च and other sacrifices. Adh. 18 contains the rules to be observed by the होत् priests. Adh. 19 to 24 treat the duties of the होत priest at the twelve minor sacrifices. Adh. 25 treats of the expiatory ceremonies to be performed by the Yajamana, the time of performing the Agnishtoma sacrifice and the duties of the Brahman priest. Adh. 26 to 30, treat of the duties of the जावस्तुत् समझण्य, and the six minor priests at the Some. sacrifice. Adh. 31 to 40 treat of the sacrifices to be

performed by a अत्रिय, and the mutual relation of the Brahmanas and the Kshatriyas.

The other Brahmana of the Rigveda is named कीपीतिक वाह्मण and represents the बाष्क्रकारता.

The सामवेद inas got several Brahmanas, of which the लाण्ड्य or पञ्चविद्या, the पद्विद्या a supplement of the provious one, are well-known.

The रूप्णयञ्चवेद has also got the तेलिरीय बाह्मण and the राक्रयसर्वेव has got the शतपय आहाण so called because it consists of 100 Adhyayas. This work, is, next to the Rigyoda, the most important production in the whole rango of Vodic Iltorature. The Brahmanas have not only provided the priests with the details of sacrificial. ritual; but they also contain the basis of grammar and etymology which were afterwards developed to such a. great extent as to attain the dignity of science. bring together all the scattered etymological passages. in the soveral Brahmanns, they would make a good निरुक्त by itself, and one may notice in Yaska's Nirukta, the frequent quotations from Brahmanas (ending with बात ह विज्ञायते or दाति बाह्मणम्) which he brings in support of the particular otymology he proposes. More important than this is the fact that the Brahmanas contain the germs of the later opic tales. Janamejaya, the celebrated King of the Kurus in the Mahábhárata, is mentioned here for the first time, in this warm without The Paudus, however, who proved victorious in the opic war are not to be mot with in this any more than in the other Brahmanas, and Arjuna is still a name of Indra. But as the opic Arjuna is a son of Indra, his

origin is doubtless to be traced to this epithet of Indra. Of two legends which furnished the classical poet Kálidása with the plots of two of his most famous dramas, one is told in detail, and the other is at least alluded to. The story of the love and separation of Purúravas and Urvaií, already dimly shadowed forth in a hymn of the Rigveda, is here related with much more fulness. While Bharata, son of Dushyanta and of the nymph Sakuntalá, also appears on the scene in this Bráhmana.

To the Atharva Veda is attached Gopatha Bráhmana which consists of two books, the first containing five chapters, the second six, both being evidently very late in origin.

Though the Brahmanas, ropresent, no doubt a most interesting phase in the history of the Indian mind, still, judged as literary productions, they are most disappointing. The general impression that they produce is one of pedantry and, if I may say so, sometimes of downright absurdity. There is no lack of striking thoughts, of bold expression, of sound reasoning and curious traditions in these collections, but these are only like precious gems set in brass and lead. The general character of these works is marked by shallow and insipid grandiloquence, by priestly conceit, and antiquarian pedantry. They disclose to a thoughtful eye, the ruins of faded grandeur, the memories of noble aspirations. The decline and degeneration of the simple and pure spirit of the Rigveda is seen everywhere, accompanied by a complete misunderstanding of the old Vedio literature, resulting from

the idea that everything is subsidiary to sacrifice. How this spirit affected the general Vedic exegosis on tradition lines, will be more fully explained on another occasion.

To this period of the Vodic literature also belong works going by the name of आरण्यक and उपनिषद, which many times form only the concluding portions of the several Brahmanas, but which on account of the absolutely distinct character of their contents and language also, deserve to be reckened as a class of literature by itself. The आरण्यक are so called, perhaps because they were works to be read in the forest (अरणे) as opposed to the regular Brahmanas which were to be read in the village (आमे). Sayana on the Africanas says—

'अरण्याध्ययनावेतवारण्यकामितीयंते । अरण्ये तक्षीयतित्वेवं वाक्यं प्रचक्षते ॥ '

Or the reason might be that those strowers were the Bráhmauns for the vew of the anchorite, as they contain explanations of the ritual and allegerical speculations thereon. This is alone possible for the strategy as a substitute for the netual sacrificial observances which were no longer practicable. Thus, the strowers form a natural transition to the speculation of the Upnishads, altogether emancipated as these are from the imitations of a formal cult. Thus it may be seen that these three classes of works the strower proper, the strowers and the sufficient mark three consecutive stages, not only in the Indian thought in general but in the life of every individual person. The strower advocating

and the first state of the stat

the actual observances of the sacrifice are meant for the शृहरथ, the आरण्यकः whose subject is the allegorical sacrifice, for the बानप्रस्थ and the उपनिषद् purely philosophic, for the संन्यासिन. They mark the three distinct paths to निःश्रेयस, ं. ६. कर्म, उपासना and ज्ञान.

. Coming to उपनिषद्ध in particular, they mark an absolutely different path from that of the works that preceded them in the Vedic canon. The Upanishads, not known by the title of Veda, are, however, included in the श्रुति and are at present the most popular works. They are popularly called वेदान्त, inasmuch as they form the closing part of the Vedic canon or revelation or because they contain the highest and ultimate goal of the Veda as they deal with मोझ or Highest Bliss. They are, as it were, the kernel of the whole royclation. It is to be noted that though they are looked upon as the basis of all the six आस्तिक दर्शन still it is only one of these the उत्तर मीमांसा or वेदान्त (not to speak of the different kinds of वदान्त) that has received the title as such. Knowledge and not mere ceremonial, is the way to happiness, that is the keynote of the works we are now considering. The overdoing of the sacrificial cult brought on its own downfall, which culminated in the Upanishads.

The word उपनिषद originally meant a sitting, a confidential secret sitting, in contrast to परिषद or संसद i. e. an assembly, and then, a secret teaching, a secret doctrine, a रहस्य. उपनिषद्ध are frequently spoken of as:—
इति रहस्यस (द्वसिंह ०८), यहा आदेशः (छा०. ३-५.२.), परमं
वसं (इति ६२९७.). An attempt to maintain secrecy with regard to abstruse and therefore easily misunderstood

doctrinos seem to be implied in such warnings as in— 'इरं वाय तज्ञ्येद्याय प्रवाय पिताबद्ध प्रमुयात् प्रणाय्याय वाइन्तेवासिने' (छा. ३-११-६). One who has road the Upanishads may have been constantly struck by the feature that a toachor refusos to impart any instruction to a pupil, who approaches him, until by persistence in his endoavour, he has proved his worthiness to receive the instruction, as is illustrated, for instance, by the story of नाचकत्त्र and the god of death (in कही.) or by that of इन्द्र and प्रतवने (कीपी.).

Originally there must have been one उपानिषद् for every जासा of the four Vodas, just like the माज्ञणंड. At present wo know of the following उपनिषद् , ऐतरेयोपनिषद् roprosonting tho पेतरीयन्न, tho कीपीताकि, the कीपीतिकन्ड, both those उपनिषद्म, of course, bolonging to the मत्येद. छान्दाग्य belongs to the सामवेव. तैलिरीय, कठ and श्वेताश्वतर bolong to the छण्ण यख-वह while बृहदारणयक and ह्रश to the हास यज्ञवंद. The number of उपनिषद्ध belonging to the अध्ययंग्य is large, amongst which सुण्डक, माण्डक्य and प्रभ may be mentioned. The ten principal उपनिषद् known as व्योपानिषद् aro वृहद्रारण्यक, ऐतरेय, छान्दोग्य, तैत्तिरीय, ईश, केन, कठ, प्रश्न, हण्डक and माण्डुक्य. अपानिषद् are wonderful works and no sufficient idea of them can be had without actually reading some of them at least. What is this world? Who am I? What becomes of me after death? such questions are asked and boldly answered. Of course, there is an absence of a systematic uniformity about them. They are, as it were, so many guosses at truth. The freedom and breadth of thought, which we meet with in the Upanishads is only marvellous, and can be brought home to the reader if only he is reminded of the fact that not only the Ved-

antins but also, the सांख्या and योगा, the बेशाबिका and नेपायिका profess to derive their several doctrines from the उपनिषदः which are the fundamental basis and which are the final court of appeal, in cases of dispute. I need not attempt to give a synopsis of any of these उपानिषद् as these are easily accessible and much indeed has been written on them both in English and in the Vernaculars. Before taking leave of them, however, it would not be out of place if I refer to the question, what do the Upanishads teach, which has been answered in various ways. Many scholars, along wih the orthodox people especially about Maháráshtra hold that the Sankara Vedanta represents the true teaching of the Upanishads. In spite of the many inconsistent and mutually incoherent texts met with therein, the Sankara Vodánta has best succeeded in accommodating all and evolving one definite system therefrom. According to this view the kernel of the Upanishads may be summed up as follows-

- (1) The átman is the knowing subject within us.*
- (2) The atman, as the knowing subject, is itself unknowable. §
- (3) The atman is the sole reality.‡ It is the metaphysical unity which is manifested in all empirical plurality; thus hinting that all plurality is a mere माया.—

. .

^{*} Cf. Brih. 3-8-11; 'मान्यवृतोऽस्ति मृष्ट् नान्यवृतोऽस्ति श्रोतु नान्यवृतोऽ-स्ति सन्त्रु नान्यवृतोऽस्ति विज्ञातृ—'

[§] Brib. 3-4-2. 'न बृद्धे ईष्टारं पश्ये। न श्वते। श्रीतारं श्रुष्टुयाः न मते। मन्तारं मन्तारं मन्तारं

[‡] Bilb. 2-4-5. 'आत्मनो वा अरे वृश्तिन अवणेन मस्या विज्ञानिन इवं सर्वे विदिधं भवति.'

Thus, these people say that though the expression माया in the strict sense of ignerance or आवेबा or illusion may be of a later date, still the dectrine that the universe is illusery was taught by the Upanishads; and that the elder the texts of the Upanishads are, the more uncompromisingly and expressly; do they maintain this illusery character of the world of experience.

On the other hand, others hold the view that the Upanishads contain no one dectrine, which appears from the fact that all the six systems of philosophy try to doduce their doctrines from the Upanishads; that even the germs of the se-called नास्तिक schools like the बी-सन and जेनह were present in them. This view is well stated in the very first paragraph of his Vaishnavism by Dr. Bhandarkar, which may bear quotation, as it points out very succinctly the standpoint from which we must regard the Upanishads. The old Vodic gods became indissolubly involved in the elaborate and mechanical system of worship that had grown up. Speculations as regards the apprepriatonoss of the rules and modes of worship and their efficacy as regards man's good in this world and the next, bocamo prevalent. But all this did not satisfy the religious spirit of the people. Religious speculation of a more natural order came to be established about the close of the hymn-ported and was centinued into that of the Upanishads. The various problems about god, man, and the world engaged the attention of many thinkers and a variety of selutions was arrived at. It is generally bolieved that the Upanishads teach a system of Pauthoism; but a close examination will show that they teach not one, but

various systems of doctrines as regards the nature of god, man and the world and the relations between them. The religio-philosophic systems of modern times which are mutually inconsistent, quote texts from the Upanishads as an authority for their special doctrines. These references to the old books are correct in the most prominent cases but when the advocates of the systems force into other texts of an opposite nature a meaning consistent with their own special doctrines, they are manifestly wrong. That the Upanishads teach not one but various systems must follow from the fact that they are compilations just as the Rigveda-Samhitá is. The speculations of the old seers were clothed by them in words, and these were handed down orally and came to form a large floating mass'.

From the Brahmana-period now we pass on to the third and the last period of Vedic Literature, viz. the Sútra period; from Sruti we now pass on to Smriti. The Sutra works form the connecting link between the Vedic and post-Vedic Literatures. The style of thoso works, the Sútra style, is very peculiar and stands unrivalled in the history of all the literatures of the world. If the Brahmanas erred on the side of verboseness and repetition, these erred on the side of brevity. A स्व means an aphorism, a sentence, most artificial, enigmatic and as brief as possible. The use were like so many keynotes as it were, and everything else was to be supplied from the memory. The Sútras, from a literary point of view, have absolutely no artistic value and they are quite unintelligible without commentaries. For the sake of brevity, certain technical words or dians and

the birth of a son. And this desire for brovity may be explained thus. The Brâlmanns and other works regarding the sacrificial ritual became so voluminous and bulky that it became almost impossible to remember them and utilize them. Hence the necessity of short and convenient treatises which can be easily committed to memory, was felt. Of course in the days when the ritualistic observances were actually in full vegue, these treatises could not have been as observe and unintelligible to them for whem they were meant as they became afterwards; for, in early times many things must have been quite familiar and plain which we have now no clue to understand exactly.

In this Sûtra literture, there stand out most prominently, the six Vedangas. This name does not imply the existence of six distinct books or treatises intimately connected with the sacred writings, but merely the admission of six subjects the study of which was necessary either for the reading, the understanding or the proper sacrificial employment of the Veda. The six dectrines commonly comprehended under the title of Vedangas, are Siksha (prenunciation), Chhandas (metro), Vyakarana (grammar), Nirukta (etymology).

Jyotisha (astronomy), and Kalpa (ceremonial), which wo shall now briefly review in order.

Sayana defines a जिल्ला thus—' शिक्ष्यन्ते वेदनायोपदिक्य-न्ते स्वरवर्णादयो यत्रासी शिक्षा—It was a name given to works containing rules regarding the propor pronunciation of the Vedic texts. The prose work now known as faren (generally printed at the end of the Samhita along with other Vedângas) must be, no doubt, a very modern work and one of the least successful attempts pre-supposing many similar works in the past. These start works must have been originally embodied as chapters in the Brahmanas, e.g. in तैतिरीय आरण्यक, but lator in more scientific treatises known by the name of the प्रातिशास्यं. "These पातिज्ञास्य were written for practical purposes; their style is free from cumbrous ornaments and unnecessary subtloties. It is their object to teach and not to edify; to explain, not to discuss."† The word भातिशास्य literally means that which belongs to every शासा.' As the sacred texts were handed down by oral tradition, it must have happened in the course of time that the spoken language must have rapidly undergone changes, so that the language of the scriptures was looked upon as antique and old. Besidos, different porsons or groups of persons must have differed from each other in the matter of the pronunciation of the toxts, which gave rise to different शासा। or recensions of one and the same Vedic text. So that ultimately the necessity of laying down certain rules regarding the phonetics and metre was felt, in order to stop any further chan-

[†] Ancient Sanskrit Literature-p. 116.

ges. Thus camo into oxistonco the प्रातिशाख्य each intended for a particular शाखा

Hero I may oxplain to you, students of Voda, the propor signification of the term शाखा and other allied words. जाखा literally means a 'branch' and is very vaguely used by the orthodox people. The four Vedas aro ofton spokon of as the four branches or situits of the Veda in general. But more properly the word applies to a text of the Voda as road and handed down in a particular school, just corresponding to our modern roadings or reconsions. The streets of the same Veda differed very little from each other, except in the matter of certain poculiarities of pronunciation or the addition or emission of a few verses, here and there. Thus street means a particular toxt and not a particular school. Thus क अन्येदी बाह्मण during the performance of his सन्ध्यायन्त्न, bofore uttoring his name, says ' शाकलशाखा-ध्यापी' one who reads or studies the text of 'the Rigvoda as handed down by the बाकला, as opposed to the बाब्कल now, however, extinct.

काखा loads us to चरण which is also a word very promisenously used. It is explained by जगन्नर in his commontary on the मालतीमाध्य thus—' चरणहाद शाखा- विहोपाध्ययनपैरकतापन्नजनसंघ्याची'—a number of men formed into one body, as pledged to the reading of a certain शाखा of the Veda. Thus चरण denotes the aggregate of the students of a particular recension of the Vedic text. परिषद् is another word in this connection, meaning an assembly of Brahmanas meeting together and containing men belonging to different चरण . According to Manu and Yajnavalkya, a परिषद् ought to consist of

公司 人名英格兰 一個 人名英格兰 教育的教育 人名英格兰人名英格兰人

twenty-one Brähmans well-vorsed in philosophy, logic and theology. Parhiara says—" चरवारो वा वयो वापि वेद-वन्तोऽग्निहोत्रिणः। ब्राह्मणानां समर्था ये परिषत्सा विधीयते॥" Thus a परिषद् corresponds to University which may consist of persons belonging to different चरणड or colleges. And the books or treatises belonging to a परिषद् are called पार्षदङ which may contain not only the पातिहाास्य concerning the several शाखाड of the चरणड but other kinds of treatises also.

There is one प्रातिशाख्य written by शौनक, for the शाकलशासा of the Rigveda. Another, there is for यसुनेद attributed to कात्यायन and the चतुराध्यायिका also by शौनक forms the प्रातिशाख्य for the Atharva Veda. Of these, I may briefly notice here the contents of the शाकलपातिशाख्य by शोनक, just in order to give you an idea of what kind of works these so-called पातिशाख्यः are. Of course, this शाकलपातिशाख्य seems to be comparatively later in origin as it is a mixture of Sûtras and Anushtubli Slokas hore and there, which latter were the special dominant feature of the post-Sûtra works. It is divided into 3 Adhyayas, each of which is again divided into 6 patalas of which there are thus 18 in all. The 1st patala treats of letters, vowels and consonants, their varietics and peculiarities and other technical matters and is named परिभाषापटल. The 2nd patala treats of Samhith and especially the combinations and mutations of vowels, and is named संहितापटल. The 3rd treats of accents and is named Patalas 4,5 and 6 treat of the combinations and mutations of consonants, the 4th and 5th being respectively called सन्धिपटल and नतिपटल, नाति being a technical term meaning the change of dentals to linguals. 7 to 9

troat of the circumflex accont, 11 of the clision of masals etc., 12 of the compound letters, 13 of the origin of letters, of the different अवस्त or internal efforts, which procede the interance of letters, 14 of the powers of letters, 15 of the rules for reading the Voda within certain prescribed times, 16 to 18 of metros, their feet and their presiding divinitles.

The second देवाड़ is सम्बद्ध which is also for the purpose of the proper reading and reciting of the Vedic texts. As seen above, the closing sections of the शीनक's मातिशास्प treat of this very subject. The देवाड़ work known at present is the work by पिहल, whi however, cannot be the oldest देवाड़. For, Pingala's work treats of the Vedic as well as classical metres looking upon both as equally important. Just like शिक्षा, we have whole chapters in Brahmanas and Aranyakas, explaining and accounting for the names of the different metres. Of the Vedic metres in particular I intend to treat more fully in another lecture.

The third dath is saimed or grammar, which is necessary for the understanding of the Vode, and the work which now passes for this dath is the saimed of another. This must not have been originally the dath proper, since, as said by me observed, the saimed deals mainly with the classical Sanskrit, and only by way of exception with the Vodic Sanskrit. It is more reasonable to suppose that the work marks the last attempt in this province, which on account of its great merits acquired such a great colobrity as to supersede almost all that had been written on grammar before it, so that except the names and some particular rules

of former grammarians, we have little left of this branch of literature, except what occurs occasionally in the sufficience.

Two other Sútra works on grammar doservo to be noticed here, both belonging to a period anterior to Pánini; one, the Sútras on the उपादि affixes and the other the किद्युव. The उपादि affixes are those by which nouns are formed from roots, the nouns being used in a conventional sense, and not in strict accordance with their radical meaning. They are called उपादि, because in the Sútras, as we have thom, उप is the first-mentioned affix. In their present form, the Sútras seem to treat the Vedic words as oxceptions.

The फिद्यून treat only of the accent and as the accent is used in Vedic words only, this second collection of सूत्र is only meant for the वेद.

The fourth Veddings, to which now we shall turn our attention is the freed concerning itself with the derivation or etymology of words, and as such necessary for the understanding of the Vedic text. This Veddings is at present represented by the work of unter. It is necessary here, in order to avoide confusion, to distinguish the two works from each other, which are both attributed to unter. One is fauge consisting of more lists of words, and the other is the commentary on the same; and it must be the former work which is regarded as the Veddings. The peculiarity of this Veddings is that it is solely devoted to Vedic words. The fauge or unternal consists of three portions, divided according to the subject-matter of the words. The first of these is called the fauges and, where, for the

most part, lists of synonymous words are given. This portion occupies the first three अध्यापड. In the first of these words connected with things relating to space, time etc. in this and other worlds are given. In the second, words connected with men, their limbs etc. and in the third, words expressing qualities of both the preceding objects, such as thinness, shortness etc. are given. The fourth अध्याप which forms the second pertion of the univerty or the vecabulary is called नेगम काण्ड; since for the most part, it consists of Vodic obsolote words and homonyms; for this reason, it is also called ऐक्पविक काण्ड. The fifth and the last chapter of the univerty, ferming the third portion is called रेनतकाण्ड; for the names of the रेनताड or deities are given therein.

On this vocabulary is written a commentary which is also called from and which is very important for several reasons. First, it represents the type of the earliest classical style and in this respect stands by itself. Secondly, it is the eldest knownattempt in the field of the Vedic excessis, unparalled in respect of ingenuity and boldness, at the same time, firmly founded on the material provided by the Brahmanas and Aranyakas, which are full of passing references to etymological explanations of words.

This Nitukta consists of twolve chapters fellowed by two more परिशिष्ट अध्यायः; each chapter being divided into several स्पष्ट or sections. Of these the first three adhyayas form the भेपवृद्धकाण्ड dealing with the words in the first three adhyayas of the original Nighantu. Adhyayas 4 to 6 form the Naigama or Aikapadika

では、日本のでは、日

Kâṇḍa, dealing with the Vedicobsoleto words contained in adhyâya 4 of the Nighaṇṭu. And the remaining six adhyâyas form the Daivata Kaṇḍa, corresponding to the 5thadhyâya of the Nighaṇṭu. The most interesting portion is the introduction which covers the whole of the first adhyâya and a part of the 2nd, as well as the seventh adhyâya which is a nice and brief introduction to the study of the Voda.

Yaska begins with 4 parts of speech, नाम, आख्यात, उपसर्ग and निपात-nouns, verbs, propositions and other indeclinables which ho defines and distinguishos from each other clearly; and then proceeds to establish the main stand-point of the school to which ho belongs, viz. that all neuns are derived from verbs, after refuting in his own way all that can be said against the samo. I abstain from quoting the discussion in full, since a separate course of lectures bearing on Nirukta alone has been arranged for you. However, I cannot but quete the remarks of MaxMiller in this connection .- * "I doubt whether even at present, with all the new light which comparative philology has shod on the origin of words, questions like these could be discussed more satisfactorily than they were by Yaska. Liko Yaska, we maintain that all nouns have their derivation, but like Yâska, we must confess that this is a matter of belief rather than of proof. Wo admit with Yaska, that every noun was originally an appellative and in strict logic, we are bound to admit that language knows neither of homonyms nor synonyms. But granting

^oAncient Sanskrit Literature -p. 168-169.

that there are such words in the history of every languago, granting that several objects sharing in the same predicato, may be called by the same name, and that the same object possessing various predicates, may be called by the different names, we shall find it as impossiblo as Yaska to lay down any rulo why one of the many appollatives became fixed in every dialect as the propor name of the Sun, the Moon, or any other object or why genoric words were founded on one predicate rathor than another. All we can say is what Yaska says, it was so स्वभावत: by itself, from accident, through the influence of individuals, of poets or law-givers. It is the very point in the history of language, where languages are not amoundle to organic laws, where the scionco of languago ceasos to be a strict science, and enters into the domain of history."

Next Yaska proceeds to expiain the purpose served by Nirukta, in which connection, there is a very interesting discussion whether the Mantras of the Veda (for whose understanding Nirukta is mainly intended) are possessed of a meaning or not. Even in Yaska's time it appears that the Vedic language had become old and antique and the Vedas were so far removed in time that such questions as the above could be freely and beldly discussed. He concludes the first chapter with some verses oulogising him who knows the meaning of the Vedas. The second chapter opens up with a statement of the canons which he lays down for the derivation of words. In the case of these words where the accentuation and formation are grammatically regular and where there is a direct.

connection between the meaning of the word and the appellative power of the root, they should be accordingly treated, (there is no difficulty), but where no such thing is possible, we should only look to the sense of the word and try to derive either on the ground of some common meaning or oven of some common letters. It is with the 5th Khanda of the 2nd adhyaya that the derivation of the regular lists of words begins.

I cannot leave this subject, without asking each and every student of Rigveda to read the book and to remember, that but for Yaska's attempts at explanation, howsoever unreasonable they might appear to us sometimes, though the existence of some traditional authority for the interpretations and derivations he offers is implied, many a verse of Rigveda would have remained absolutely unintelligible to us. I may, however, briefly refer to two points. The first is that Yáska is far prior to Pánini as is evident from the facts that पाणिनि quotes his name in the Sutra 'यस्कादिभ्यो गोने' (II. 4. 63.), that many grammatical संज्ञां occur in पाणिनि's work, which he does not define, being probably well known in his time and having been already well defined explained hy his predecessors; whereas in the very beginning af Yáska's work, it is thought necessary to explain the distinction between nouns and verbs. The same follows from the fact that an improvement on the treatment of prepositions is to be observed in Panini's grammar, both as regards the different sub-divisions of them and their meanings. The second point to be noticed is that Yaska, the author of the Nirukta is a different person from Yaska, the author of the Nighantu and for the following reasons-Yaska himself says towards the ond of the first adhyaya of the Nirukta, that there were Rishis who had a direct revolution of Dharma. They communicated the Mautras by oral instruction, to those who came after them and had not such a knowledge. Their successors again becoming unfit for oral instruction, propared this work (i.e. the Samamnaya or Nighantu), the voda and the Vedangas. Hero Yaska the author of Nirukta distinctly says that the Aug was the work of some former was. The second argument in the same direction is that although Yasku invariably explains the words, just according to their order in the Nighantu, he in one case makes an exception viz., with the words दावने and अक्टपारस्य (IV. 17). In illustrating the use of those words. Yaska quotos a part of a vorso from the Veda in which both the words occur, but in a different order. On this wif in his wift on the Nirukta romarks .-- The order of the words in the Maintra is अख्यारस्य वायने but in the Samamnaya, the order is the roverse of that in the Mantra namely वायने अद्भारस्य. Hence it is known that. the Samannayu is related by some Rishis and that the commontator is different from them. Lastly at the conclusion of his work, Yaska says-'A salutation to Yaska.' Hore he must have been doubtless thinking of his ancostor, who was the author of the Samamnaya.

The fifth Vedauga is कल्प or ritual, which is specially intended for the proper application of the Vedic texts. The करपसूत्रs proper are based upon the Brahmanas which are full of rich material, and those presuppose a methodical and fixed distribution of the

sacrificial ritual amongst the different kinds of priests. They contain the rules referring to the sacrifices, with the omission of all things which are not immediately connected with the ceremonial. They are more practical than the Bráhmanas which for the most part are taken up with mystical, historical, mythological, etymological and theological discussions. The following remarks of Sáyana in his commentary on the Baudháyana Sútras will serve to give us an idea of the nature and purpose of the Kalpasútras—'तन ताबिह्ध्यर्थवादमन्त्रात्मना निधा व्यवस्थितो वेद्रस्तिः। विधिविहितमर्थवाद्यरोचितं मन्त्रेण स्थतमस्युद्यकारि भवतीति। ततश्व चोदितानां कर्मणां सुखावबोधाय भगवान् बौधायनः कल्पमकल्पयत्। यतो नाह्मणानानानंत्रं दुरववोधतयाअतो न तेः सुखं कर्मावबोध इति कल्पस्त्राणीमानि प्रतिनियतशाखांतरानंगीचक्कः पूर्याचार्याः। फल्पस्य वैद्याव्यकारम्यं कर्मणा कर्मणा स्थावार्याः। फल्पस्य वैद्याव्यकारम्यं कर्मणा प्रतिनियत्रशाखांतरानंगीचक्काः प्रविवार्याः।

There are two कल्पस्ति for the होत pricsts,—one by आञ्चलायन, and the other by आञ्चलायन. Of these the आञ्चलायन श्रोतस्त्र are divided into two main parts, each part consisting of 6 Adhyáyas, and each Adhyáya being again divided into several कण्डिकाड. They deal with दर्श and पाणमास and such other Vaidic sacrifices. Those of you who would like to know more about the work, I may refer to the edition in the Bibliotheca Indica, which also contains a good synopsis of the several topics treated therein.

There are several Sútras for the अध्यक्षे pricst, of which the Sútras of बोधायन and आपस्तम्ब belonging to the रूप्यक्रवेद and those of कात्यायन to the शुक्रयक्षवेद may be mentioned here. The सूत्रs for the ceremonial of the

^{*}A.S. L. -p. 170. 'The several have the advantage of being clear, short, complete and correct.'-

उद्गातृ priests who followed the सामध्द are ascribed to ला द्वायन and द्वासायण both following the authority of the ताण्डयनाक्षण.

"Tho कल्पसूत्र" are important in the history of Vodic Literature, because they not only mark a new poriod of litorature and a new purpeso in the litorary and roligious life of India, but they contributed to the gradual extinction of the numerous Brahmanas which to us are, therefore, only known by name. The introduction of a Kalpa-Sûtra was the introduction of a now book of liturgy..... In a short time, the authors of Kalpasitras became themselves the founders of new charanas, in which the Sûtras were considered the most ossential portion of the sacred literature, so that the hymns and Brahmanas were either neglected or kopt up under the name of "the hymns and Brahmanas of the now charanas" having ceased to ferm by themselves the foundation of an independent tradition er school." *

Te this same class of literature also belong two other classes of Sûtras, the Grihya Sûtras and the Sûmayûchûrika Sûtras. Beth are included under the commen title of Smûrta Sûtras, in opposition to the min tas, noticed above. These latter deal with rites and sacrifices enjoined by the Vodas and thus derive their authority from the Vodas and thus derive their authority from the commencial tradition. The tas Sûtras deal with ceremonics perfermed by the married house-helders

о A. S. L. p. 186, 187.

chiefly for the benefit of the family; where as the सामयाचारिक Sútras deal with rules to be observed by the rising generation regulating the various relations, of everyday life. It is these, also called as धर्मसूत्रs, in which are to be discovered the originals of the later metrical law-codes such as मजरमूति, पाजवल्क्यरमाति and Of the use was there may be mentioned here. others. the पारस्कर गृह्यसूत्र belonging to the साध्यंदिन ज्ञाला of the यज्ञर्वद, the गाभिल गृह्यस्त्र for सामवेद, and the आश्वलायन and शाङ्खायन गृह्यसूत्रs for the ऋग्वेद. The आश्वलायन गृह्यसूत्र consists of four adhyáyas, being sub-divided into 24,10, 12 and 2 क्वाण्डकाड or sections respectively. The topics dealt with, are पाक्यज्ञ or the sacrificial ceremony which is intended to impart to a man excellence or perfection, a peculiar fitness without which he would be excluded from the sacrificos, and from all the bonefits of his religion, देवेभ्यो बलिद्दरण offering oblations to Gods, चीलकर्म or the ccremony of cutting the hair of the child born, उपनयन or the ceremony of investing him as a student and handing him over to a 35, under whose care he is to study the scriptures and to perform all the offices of a बहाचारिन् or a religious student, समावर्तन or returning from the 25's house, after having served his apprenticeship and grown up to manhood, विवाह or marriage and other ceremonies relating to the life of a householder, domestic rites in which certainly there is moro of human interest than in the great sacrifices described in the औत स्वs. The offerings themselves are generally of a simple nature and the ceremonial does not require the assistance of a large class of professional priests. A log of wood placed on the fire of the hearth, an

oblation pourod out to the gods or alms given to the Brahmanas, this is what constitutes a पाउपत्र. In all this ver ritual, is disclosed that deep-rooted tendency in the heart of man to bring the chief events of human life in connection with a higher power, and to give to our joys and sufferings a deeper significance and a religious sanctification.

The last day to be noticed is raided or astronomy which is represented by one little tract, the object of which is not to teach astronomy, but a more practical one, viz. to convey such knowledge of the heavenly 'dies as is necessary for fixing the days and hours of the Vedic sacrifices. Even in Brahmanas and Aranyakas, we find frequent allusions to astronomical subjects, and even in the hymns we find traces which indicate a certain advance in the observation of the moon, as the measurer of time. It is note-worthy that the name of the moon is the same; in Sanskrit, Greek and German and that it is derived from a root which originally means 'to measure'. So also the intercalary menth is referred to in Rigvoda I. 25-8.

So far we have described the six Vedangas which form the most important literature of the Sutra period. So also we noticed above the Grillya and Samayacharika Sutras. Now I have to draw your attention to some miscellaneous works of less importance belonging to this period, which scarcely deserve the name of literature. Such, for instance, are the Anukramanis or

^{*} The several kinds of spiritual or metaphorical wars described in Adh. IV. of Bhag-Gita may be noticed in this connection.

[‡] der Mond (Ger.).

systematic indices to various portions of the ancient Vedic literature. Amongst these stands out most prominently the Sarvanukramani of Rigveda, by Katyayana. It gives the first words of each hymn, the number of verses, the name and family of the poets, the names of the deities, and the metros of overy vorse. Shadgurusishya tells us in his Vedarthadîpika, a commentary of this Sarvanukramni, that before Katyayana. there existed one index of the poets, one of the metres. one of the doltios, one of the Anuvikas, the old chapters of the Rigveda and one of the hymns, and that these indices were composed by Saunaka, to whom the well-known work Brihad-devatû is also ascribed. For Yajurveda, there are three Anukramanis, one for the आनेपी शासा of the Taittiriyas, the other for the शासा of the जारायणीयs and the third for the माध्यन्त्रिम जारवा of the वाजसनेपित्र. For Sama-Veda the oldest अनुक्रमणी is the आंदेव बाह्मण, other existing अनुक्रमणीं being much later. For the Atharva-Veda, there is one महत्सर्वाचक्रमणी.

Besides these अनुक्रमणींs there is a class of works called the परिशिष्ट or appendices, which deserve a mention in passing. One of them is the चरणव्यह ascribed to शानक, a treatise on the various schools into which the Vedas had branched off, briefly narrating the traditions relating thereto.

The style of the Parisishtas is less concise than that of the Sûtras. The simple anushtubh sloka proponderates. Still the Parisishtas have not yet fallen into that monotonous uniformity, which we find in works like the Manava-Dharma-Sûtra or the later Purapas. They, therefore, may be considered the

very last outskirts of Vodic literature, but they are Vedic in their character and they must be supposed to have originated at the expiring moments of the Vedic ages. Their object is to supply information on the theological or coromonial points which had been passed ever in the Sûtras, most likely because they were not deemed of sufficient importance, or because they were supposed to be well-known to these more immediately concerned. And what they treat, they treat in a popular and superficial manner; and they show clear traces of intellectual and literary degeneracy.

LECTURE III.

THE ARRANGEMENT OF THE RIGVEDA.

Rigveda is not a book—but it is a library and a literature—Its unique character—Principles of arrangement—Ashtaka, Adhyaya and Varga—Mandala, Anuvaka and Sakta—Rishi, Dovata and Chhandas—The internal arrangement of the several Mandalas—The Valakhilya hymns—The Apri hymns—Earlier and later Rishis—The criteria for distinguishing between elder and later hymns—grammatical forms—vecabulary, poculiaritles of Sandhi—Motro—Rigveda hymns found in Atharvaveda—Oriterion of ideas.

In the course of the last lecture, I tried to give you a general idea of the literature known as Vedic including both the Voda proper and works related thereto. In this lecture I mean to deal with one book in particular and that is the tight of the tria. Here, however, in the beginning, I have to give you a caution, that when we call Rigveda a book, we must not understand the statement literally. If a book means a work written by one man, with unity of time and ideas, well, Rigveda is far from being a book. It is rather a literature in itself, a library composed of several books which can be individually distinguished from each other. The form in which at present we have the tight of the trial clearly shows that the different hymns were composed long before they were brought

togethor and systematically arranged with cortain. principles underlying. That the different portions ef the Samhitá represent different stages chronologically fellows from various indications of language, vocabulary and style, grammatical infloctions, motre and last of all, ideas. As said in my last lecturo, Rigvoda as a work of literature stands by itself, in point of lauguage and thoughts apart from ether works belonging to the Vedie canen. Thore is semothing which charactorises Rigveda and stamps it with an individuality of its own. In spite of this unity, however, there is a variety or plurality in the Rigveda itself. This is the mest important thing which overy student of Rigvoda must bear in mind, and which never struck the orthodox exegesists. Though Rigveda is much more natural in character than other Samhitás and is not purly liturgieal like others, still there are distinct principles of a deliborate arrangement and the influence of priests, which would be made clear, when we consider the divisions into which the whole of the Rigyoda Samhitá is divided.

There are two ways of dividing the centents of the Rigveda, one into Ashtakas, Adhyáyas, and Vargas, and the other into Mandalas, Anuvákas and Súktas. Of these, the former is not at all important and nothing but more convenience of study is at its root. Rigveda is divided into eight Ashtakas, each Ashtaka consists of eight Adhyáyas, and each Adhyáya consists of several Vargas, a Varga being usually made up of five was er verses, semetimes more or loss. This is the division popular with the agas with whem a un is the measure

of a lesson. This division is purely mochanical and comparatively modern.

The second division, however, though no doubt mechanical in charactor, has, howover, some scientific historical principlos to support it. That it is vory old follows from the fact that it was known evon to the ATRIUS. There are ten Mandalas. The first Mandala contains twenty-four Anuvákas or soctions, tho socond, four, the third and fourth, five each, the fifth, sixth and seventh, six each, the eighth, ten, the ninth, soven and the tenth, twelve Anuvákas. Each अनुवाक consists of a number of ares or hymns, not the same for all and each was is made up of a number of vorses or was. Before we understand the principle of arrangement which undorlies this division, it is: necessary to romembor that overy Sukta has a ऋषि, देवता and छन्दस् a soor (or we may say, a composor), a deity and a metro, without whose knowledge the meaning of a hymn can not be properly understood nor can the hymn be efficiently applied. अविदित्वा ऋषिं छदीं देवतं योगमेव च । यो अध्यापेय जापेक्षापि पापीयाञ्जायते त सः ॥ Báy, Intr. p. 73.

'What these ऋषि, देवता and उन्दम् mean is briofly stated by Kátyáyana in the boginning of his Sarvánukramaní. 'यस्य बाक्यं स ऋषिः। या तेनीच्यते सा देवता। यदशर-परिमाणं तच्छन्दः। अर्थेप्तव ऋषिः। या तेनीच्यते सा देवता। यदशर-परिमाणं तच्छन्दः। अर्थेप्तव ऋषिः। विवाश्च क्षिप्ताच परिमाणं तच्छन्दः। अर्थेप्तव ऋषिः। देवताश्च क्षिप्ताच ।' About the देवताs and उन्देश I shall spoak more fully in subsequent loctures. As for the ऋषिः, I have told you already that they are not, from the orthodox point of view, regarded as composers or writers but as seers, as Sáyana remarks in his commentary of the very first

verso of Rigvoda, 'अतीन्द्रियस्य वेदस्य परमेश्वरानुग्रहेण प्रथम-तो दर्शनाद ऋषित्वम् otc.'

New coming back to our ten Mandalas, we netico that Mandalas, 2 to 7 are hemogeneous in character and arrangement, while 1, 8, 9, and 10 have different principles underlying them. The Mandalas from 2 to 7 are each of them ascribed to one Rishi or one family of Rishis. Thus the with of those मण्डलंड are यत्समद, विश्वामित्र, वामदेव, अधि, भरताज, and वसिष्ठ respectively or their descendants. Not only the existonce of a common soor characterises these ungers, but even there are definite principles prevailing in the sequence of the hymns in each Hogy itself. Thus as a rule, the first group of hymns in each Mandala is addressed to Agni, the 2nd to Indra, and the rest te miscellaneous deities. Further the arrangement of the hymns in each of the groups proceeds on the principle that every following hymn has a less numbor of verses or was than the preceding one with only a very few exceptions of hymns about whose character there prevails a doubt. As an example of this diminishing order of verses, we may examine the 7th Mandala with which we would be more particularly concerned.

Hy	Hymns following the law.		Exceptions	
Agni-group	•••	1-14	•••	15-17
Indra	•••	18-30	•••	31-33
Viávodovás	•••	34-54		55
Maruts	***	56-58	•••	59
Súrya, Maruts and Varuna		60-65	•••	66

Thus it may be seen that all violations of the law of the diminishing number of verses occur at the end of a group. The probable explanation may be that the shortest hymns which stand at the end of each group, were at sometime through whim or misunderstanding combined. So also if allowance is made for later additions, it may be seen that these books 2 to 7 form a series of collections which contain a successively increasing number of hymns.

No such definite principle of arrangement can be discovered with regard to the 8th book, though the Kanva family predominates amongst its Rishis.

The ninth Mandala has a peculiarity of its own as far as the arrangement is concerned. All the hymns in this Mandala are, without exception, addressed to one deity and that is the Pavamana Soma. Tho hymns are composed by the same Rishis as those of books, 2 to 7. Thus it may be probable that all the Soma hymns of the Rishis of books 2 to 7 were, as it were, taken out and collected together into one separate book, and at the same time arranged with regard to the metre. Thus we see, that hymns 1-67 are in Gáyatrí metre, 68-86, in Jagati, 87-97 in Trishtup, and the rest 98-144 in miscellaneous metres.

Mandalas I and Io form the youngest portion of Of these, Mandala r contains 14 groups each ascribed to one common Rishi and having hymns arranged with regard to the deities, thus showing the same principles of arrangement as characterise books 2 to 7. Thus to take an instance the first group of Mandala I. is made up of II hymm all ascribed to विश्वामिन मधुन्द्रस्, of which hymm I is addressed to Agni, 2 to Váyn, 3 to Asvins and Indra and the rest all to Indra.

Thus it may be likely that these shorter collections forming book 1, were later prefixed, as it were, to the family books (i. e. 2 to 7), which latter must have served as the medel for the internal arrangement of the ferner.

The tenth Mandala is indood an aggregate of supplementary hymns clearly showing their familiarity with the 1st nine books. The only unity which connects the different hymns of the Mandala is chronological. In this Mandala, we find a series of collections arranged in the descending: order of the number of hymns in each, and extending from X 1 to X 84. From X 85 to 191, we find single hymns arranged in the descending order of the number of stanzas contained in each.

From all this it appears that Mandalas 2 to 7 gonerally formed the oldost portion, the nuclous, as it were, to which M. I was profixed and M. 8, 9 and 10 were affixed. That even the ancient Brahmins leeked upon the Rigveda as made up of three portions, follows from the fact that the Rishis were divided breadly into three divisions— 1st anima: i.e. those of 100 verses, (meaning the wells of the 1st Mandala each of whom scoms to have contributed nearly 100 verses.); 2ndly ATECHT: i.e. the middle ones (referring to the

Rishis of 2 to 7) and 3rdly श्चारक्ताः and महास्कताः i.e.

We have also to notice hore a group of eleven hymns known by the name of 'Valakhilya' which stands by itself and which is generally put at the end of the 8th Mandala. They are printed as hymns Nos. 49 to 59 of Man. VIII. in MaxMiller's edition. are not recognised by older writers, not reckoned in the division of Mandalas and Anuvakas, not commented on by Sáyana, though mentioned in Kátyáyana's Sarvánu kramani. That these do not naturally bolong to the place where they are found, is quite clear. Tho oarliest interpretation of the name Valakhilya is found Taittiriyaranyaka I. 23. 'स तपोऽतप्यत । स तपस्तप्त्वा शारीर-मध्यत । तस्य यन्मांसमासिततिऽरुणाः केतवी वातरहाना ऋषय उदितिष्ठम्। ये नखास्ते वैखानसाः। ये बालास्ते बालखिल्याः। ' Thus we see hero that the word बाल or बाल in बालखिल्य is taken not in the sense of 'a child', but 'hair.' The fact that that these disturb the regularity of both the Mandala and Ashtaka divisions shows that they were later

I have also to notice here the sunt hymns which are peculiar in character. They resemble the hymns which we find in the Sama and Yajurvedas, being evidently composed for sacrificial purposes. There are ten of these scattered about in the ten Mandalas. They generally contain 11 verses each, addressed to eleven separate deities in the following order—verse 1 to

^{*}Of. Advaluyana Grihya Sutra, III. 4.—'अथ ऋषण शतार्थिनो साध्यमा शृत्समेदो विश्वामित्री वामवेवोऽत्रिभेरद्वाजो वसिष्ठः प्रगाधाः पावमान्धः क्षमस्कता महास्पता इति etc.)

Agni इसमिद्ध, 2 to तद्भागान or नराशंस (two aspects of Agni.), 3 to इळाड or gifts, 4 to बाई: or sacrificial pile of grass, 5 to देवी: द्वारः, 6 to उपासानक्ती, 7 to देव्यो होतारी (i. e. Agni and Aditya otc.), 8 to सरस्वती, इळा and भारती, 9 to त्वष्ट् (tho crontor,) 10 to वनस्पति, (the troo of tho sacrifico), and 11 to स्वाहास्तिड. See for instanco VII.
2. The position of those artificial hymns necessarily pre-supposes a deliberate arrangement on the part of the collectors.

You have to romember that the text of the Rig-voda is found in two forms, that and tarts. In the latter the words or the are soparately shown; whereas in the former, they are combined by the rules of Sandhis. Now we find that six verses in the Rigveda (VII. 59. 12; X. 20. 1; X. 121. 10; X. 190. 1—3) are not found analysed in the Pada-text, but only given there, over again in the Samhltá form. This shows that these verses were not acknowledged as truly Rigvedic, a view justified by internal evidence.

So far we have shown, only on the ground of the external arrangement of the different hymns, that the Rigveda can not be one book but many books, to the older amongst which, the younger ones were later prefixed or affixed. There are, however, other considerations also which point in the same direction when once we proceed from the historical point of view.

In the hymns, themselves, we have indications of the earlier and later generations of Rishis, and also of earlier and later hymns. Here I would content myself with giving references from the 7th Mandala only. 18.1-ते ह यित्पतरिश्वस इन्द्र विश्वा वामा जरितारी असन्वन् 1,229. वे च पूर्वे ऋषयः ये च चुन्ताः इन्द्र ब्रह्माणि जनयन्त विद्याः 1, 29. 4-उतो घा ते पुरुष्या इदासन् येषां पूर्वेषामञ्जूणोः क्रषीणाम् 1, 53.1 ते चिद्धि पूर्वे कव-यो ग्रुणन्तः 1,76.4 त इद् देवानां सधमाद आसन् ऋतावानः कवयः पूर्व्यासः। 91.4 पुरा देवा अनवदास आसन् ।

In all these passages old and new ऋषिs are distinctly spoken of.

66,23 सूरि चक्र मरुतः पिञ्याणि उक्थानि।, 15.4 नर्व त स्तोममञ्जये दिवः इयेनाय जीजनम् ।, 59.4 अभि व आवर्त् समित नेवीयसी, । 61,6 प्र वां मन्मानि ऋचते नवानि कतानि ब्रह्म छातुषन् इमानि ।, 93.1 शुचिं नु स्तोमं नवजातमय इन्द्राग्नी वृष्टकणा सुषेथाम् ।.

In these passages, old and new songs or prayers are spoken of. From these allusions, it is quite evident that the hymns of the Rigveda were composed by different generations of sages, and that they extended over a long period of time.

When we have once admitted the fact that the ten Mandalas of the Rigveda have gathered up the work of many periods and that the original composition of the hymns was probably the work of several conturies, then we can discover several criteria by which to distinguish earlier from later hymns. I shall here briefly notice only some of them.

First is the criterion of grammar and language. It has been found by a searching scrutiny of the particular gramatical forms in the Veda that certain forms are more frequently found in earlier hymns. I shall notice some of them here.

1 From nouns in अ, the Instrumental Singular mas. or neutor in आ—e. g. यज्ञा I. 168-12, हिमा X. 37-10 b, उक्या IV. 33-10 a and so on.

- Old decionsional forms from radical stoms in
 आ e. g. धियंधे, द्वाचिष, क्रष्टिमः, जास्पत्या and so on.
- 3 The Instrumental sing. in ई--e.g. आचिनी, अप्रभूती, उती, प्रभूती, श्रमी, श्रष्टी, इस्तच्युती and so on.
- 4 The neutor plural in ऊ, e. g. उस्त, त्रिधात्, वसू, वीद्ध सहन्त, and so on.
- 5 The vocatives in बः and मः from stems in वस्त् and मन्त् ; e. y. अदिवः, सहस्वः. स्वधायः, हारियः हथिब्मः and so on.
- 6 The forms सद्धा, सुन्य, अरमञ्च, sometimes found in the text in Sandhi combination, to be restored in accordance with the metre—e. g. VII. 29. 1 व सुन्य (required by the metre), VII. 32-21 c; VII. 90-2 b; अरसभ्य VII. 74-5 d; VII. 78-1 d; VII. 79-4 a; VII. 81-6 b.
- 7 Unaugmented forms of historical tensos—e. g. तक्षत, दुवबत, प्रथिष्ठ, भरत, भुवत ; otc.
- 8 All forms of the Perfect Subjunctive Active-e.g. चिकितः, जुजीयः, ततनः, दिवयः, वधर्षत्, मामदः, सस्यः, बधः.
- 9 Porfect participles without reduplication except विद्वांस्—. ५. शिद्वांस्, वास्त्रांस्, मीळहूबांस्, and साद्वांस्.
- 10 Forms of the 2nd per. dual and plural of the root-Aorist, having strong stoms--c. g. कर्तम, कर्त, कर्तन, गन्तम, धात, धातन
- 11 Tho Aorist Imporativo forms in स-कार्ष, जोष, दाई, धक्षि, नेपि, भक्षि, यक्षि, विशे, विशे, विशे,
- 12 The Aorist Imperativo form बोचि, whether from अभू or भू.
- 13 The middle participle in सान from the स Aerist-
- 14 The infinitives in तये and their derivatives--e.g. इष्ट्रणे, इन्यवातये, पीतये (पूर्व--०६सीम--), वीतये, सातवे (वाज--).

15 The infinitives in ध्ये.

16 The infinitives in बने-c. g. दावने, otc.

17 Tho infinitivos in से or असे-अर्चसे, ऋ बसे, ऋ उजसे.

18 The pronoun स्य, त्य-

The following words are characteristic of the carlier portion of the Rigveda--

अकतु—'beam'; अत्य—'swift'; अब्रि and its compounds; आमीष्ट—'holp', and its compounds; अवः and its derivativos liko अवस्य otc.; ऋजीषन—'direct'; क्षिति—'dwelling'; चनः—'delight' and चनस्य, चानेष्ठ etc.; चर्षाणि—' mortal'—and its compounds with root nouns e. g. चर्षाणिस्त otc.; compounds ending with चन्त्र-अश्वचन्त्र, प्रचन्त्र, etc.;—tho verb and adj. तुजः; compounds ending in तुर् 'conquering, e. g. व्यत्र्, स्पत्र् etc.; compounds boginning with तुचि—e. g. तुनिजात, तुनिवेष्ण etc.; देस् 'to oxcel'—चंसन, दंसः, दंशिष्ठ प्रस्तंस्त्, स्दंसस् etc.; so also दस्म, दस; हुवः; वेनताति; मन्त्र with compounds; मन्मन् 'thought' with compounds; वाज 'prize' and compounds; निम—'a poot'; अवः 'glory'.

On the other hand words connected with disease, magic and popular belief, so also technical terms chiefly of ritual and philosophy are characteristic of the later parts of the Rigveda which are allied to the Atharvaveda.

Certain peculiarities of Sandhi also may be pointed out as characteristic of the earlier or proper Rigveda. Thus we find that very generally, final wand we are regularly combined with an initial vowel or diphthong following; and final was, was are regularly combined with similar vowels. But before dissimilar vowels they are regularly used with hiatus, except perhaps in

the case of dissyllabic propositions followed by the augmented tenses of the verbs to which they belong.

So also words ending in A:, V, A lose their final element, before an initial vowol fellowing, and are therefore all alike treated as ending in A with hiatus; and similarly words ending in F and A are treated as ending in A. But duals both of nouns and of vorbs ending in V are unaltered.

According to the rules of classical Sanskrit, final π : becomes π and final π is unaltered, if the next word begins with π , but the initial π is lost. This Sandhi is comparatively rare in the Rigveda proper or its earlier part, but is considerably common in the later pertions. We find on the whole that a hiatus is more common than the combinations, though we have instances where Sandhi takes place in position in which it never takes place in classical Sanskrit e. g. in the case of duals ending in π , π and π , especially when fellewed by π .

Socondly, we have the criterion of metre. The metres which are combinations of eight-synllabled and eleven or twelve—syllabled feet like उच्चित्, कहुए, बहुती, सतोबहृती and अत्यक्ति, which are practically unknown in later literature may be presumed to belong to the more distinctively early parts of the Rigveda. The Vedic Anushtubh can be also easily marked from the later or epic Anushtubh. Here I give two verses representing the two kinds of अतुह्वस.—Vedic Anushtubh—I. 11. 5.

तुअं वलस्य गोमत अपावरित्रचो बिलस्। तुअं देवा आधिस्युषः तुज्यमानास आविष्ठः॥ Epic Anushtubh—X. 136, 7.

वायुरस्मा उपामन्थत् पिनाष्टि स्मा कुनसमा । केशी विषस्य पानेण यत् रुद्रेणापियम् सह ॥

which, as we soo, is very similar to the अतुषुष् of Bhárata and Rámáyana.

Another critorion for the same is the occurrence of a Rigveda hymn in the Atharvaveda. If a complete hymn or a fragment or even any part of it beyond one stanza is repeated in the Atharvaveda, it is a strong indication of the later character of that hymn. Thus for instance VII. 55, 5—8; VII. 59. 12; VII. 104.

There is last of all the criterion of subject matter. Broadly speaking the Rigveda hymns may be divided into two classes, religious and socular. Of course, a very large majority of the hymns belongs to the first class, while those belonging to the second class are comparatively few. The great majority of hymns are invocations and aderations of the gods therein addressed, whose keynote is a simple outpouring of the heart, a prayer to the eternals, an invitation to them to accept favourably the gift reverently consecrated.

On the other hand thoro are other hymns containing references to the details of ritual, the particular kinds of priests and their functions, which show a general tendency to doify everything connected with sacrifice. Such hymns clearly mark a later stage as compared with the hymns described in the last paragraph. Briefly speaking hymns belonging to the earlier parts of Rigveda are prevailingly characterised by the following ideas, of which simplicity of worship is the most prominent. The kindling of the sacred fire before dawn as if to ensure the return of day-

light and the preparation of the sacred drink and poetic inspiration, it is those three ideas that are the dominant features of the early Rigveda. Agni and Indra are the principal deities, the former is the homely priest and the messenger between men and gods; the latter is the physical god, warlike in spirit who broke asunder the clouds and brought down rain. On the other hand, the idea of addressing and the doors of the sacrificial chamber, of the kuśa grass and so on, all this belongs to the later parts of the Rigveda.

So also वानस्तित or hymns in praiso of the liboral donations from patrons and princes to priosts necessarily pre-suppose a fully elaborated ritual and the establishment of the practice of having hired priests to whom fees were paid.

So also hymns which are philosophical in character, asking such quostions as whonce we come, who we are, where we go, no longer satisfied with the conception that such and such a god created heaven and earth etc. are distinctly later in character and mark the period of transition from the Mantras to the Bráhmanas.

So also pootic riddles and satirical hymns belong to the later period. Hymns containing references to magic and exercism and charms, which are distinctly allied to the contents of the Atharvaveda in character as also didactic hymns mark a later stage. In a word, all those passages which record for us, as it were, the first distinctively Indian efforts to lay the foundations of philosophy, astrology and magic are to be looked upon as later in character.

Rigveda is full of myths but thoy are boldly related in the carly hymns of the Rigveda, generally in single stanzas; as for instance, the warlike deeds of Indra and the clever resources and cures of the Asvius. But in the later hymns of the Rigveda, the myths appear in a dramatic form, and the theme is not historical but social. The dialogue between Purhrayas and Urvasí X. 95, the tale of Agastya and Lopámudrá I. 179. and the tale of Yama and Yami, the parents of the human race X. 10, may be cited as instances. In such hymns, the poets for the first time wrestle with the æsthetic problems associated with the moral and relationship of man to woman. The idea that the woman is the temptress, there is no truth in the friendship of women, they have the hearts of hyænas which so conspicuously prevails in later Sanskrit literature has its germs in these later portions of Rigveda. also we have here the germs of the ascetic theories which afterwards became the conspicuous features of Brahmanism and Buddhism.

LECTURE IV.

THE WORK DONE BY MODERN SCHOLARS

(in the fleid of the Study of Rigreda).

----:0:----

The advance of criental studies—1784, the Asiatic Society of Bongal—Colobrooke—Friedrich Rosen—Roth, the founder of modern Vedic studies—St. Petersburg Lexicon—Weber—Max Müller—His sympathetic and liberalising spirit—Ancient Sanskrit Literature—Muir's Original Sanskrit Texts—Hang's Aitarcya Brahmana—Translations of the Rigyoda—Wilson, Grassmann and Ludwig—Kaegi's Rigyoda—Vediselie Studien by Goldner and Pischel—Whitney's Grammar—Oldenberg's notes on Rigyoda—Concordance and Index—Pandit's Vedarthayatna—Mr. Tilak's two books—Srutibedha.

In the course of the last two loctures, I hope to have succeeded in giving you a general idea of the literature known as Veda and of the Rigvoda in particular. Now I should proceed to speak on the method of studying Rigveda and on the principles which should guide that study. But before doing that I believe it would be useful and interesting too, to know what has been done in the field of the study of the Rigveda by modern scholars as well as by the ancients. Nay, even it is necessary for a student of Rigvoda to know the amount and quality of the work done in the direction, without having a general view of which he

can not confidently and critically proceed with the study.

One of the many benefits conferred by the British rule in India, is the revival of oriental lcarning-especially of Sanskrit learning on modern and critical lines, and its introduction into Europe. The important place which Sanskrit holds at present not only in the Indian Universities but in most of the prominent European Universities also is the result of the sympathy of rulers with ancient learning. Sanskrit learning in almost all its branches has been zealously cultivated European scholars. Critical editions of texts, reviews, fixing the chronology of works and authors, the study of old inscriptions, the collection of old MSS,, these and many more have been the several aspects of the manifold activity in the field of Sanskrit study. But nothing exceeds the work done in the field of Vedic study particular, especially that done in Germany, which, to our great surprise, in this respect, is far ahead of. England. It is a matter of still greater surprise that whereas there is not a single complete translation the Rigveda Samhita in any of the Indian vernaculars, there are two such in German and two in English, not to speak of the many commentaries and studies bearing on Rigveda in these two languages. It is the German language which has the honour of having a dictionary of the Sanskrit language on historic and comparative principles-a dictionary, a like of which no other classical language can boast of. And it must be remembered that a European scholar is generally free from the orthodox prejudices and the excessive patriotism resulting therefrom which sometimes hamper proper critical work on the part of an Indian scholar for whom it is very difficult to got rid of their influence. So also there are certain inevitable faults which characterise the work of European scholars, owing to their remote distance in spirit and tradition from the Indian point of view. Of this more later on. In the meanwhile I intend to take a brief survey, very brief indeed, of the work done by European scholars in the field of the study of Rigvoda in particular. No completeness is attempted and any important emissions may be excused.

It was about the middle of the 18th century that the great French writer Voltaire, in his 'Essai Sur les Moors ot L'osprit des Nations' highly praised the ancient wisdem of the Brahmanas which he discovered in the Ezour-veidam, which was afterwards proved to be a forgery by some missionary of the name of Robertus de Nobilitus. It was not till the year 1784, that the study of Indian ancient learning was based on a firm foundation, the year whon the Asiatic Society of Bengal was founded. The following year saw a translation of the Bhagavad-Gita, by Wilkins. The year 1805, hewever, marked an epoch in the course of Vedic studies when Colebrooke contributed to the Asiatic Researches his paper "on the Vodas, the sacred writings of the Hindus". The paper is a longthy survey of the whole of the Vedic literature extending over more than a hundred quarter pages, which may be read with advantage even to-day, and which does high credit to the author, especially when we take into consideration the state

of Sanskrit learning in his day, and clearly shows his grasp and accuracy. It would be interesting to read the conclusion of his essay, espocially in the light of the present day condition of Vedic studios. preceding description," says he "may serve to convey some notion of the Vodas. They are too voluminous for a complete translation of the whole; and what they contain would hardly reward the labour of the reader, much less that of the translator. The ancient dialect in which they are composed and ospecially that of the three first Vedas, is extremely difficult and obscure and, though curious, as the paront of a more polished and refined language (the classical Sanskrit), its difficulties must long continue to provent such an examination of the whole Vedas, as would be requisite for extracting all that is remarkable and important in these voluminous works. But they woll deserve to be occasionally consulted by the oriental scholars." * How far this judgment has turned out to be correct, I leave to you to judge. I have specially to recommend Colebrooke's instance to you, young students of Rigvoda, because this oriental scholar had at first a strong disgust for oriental learning, of which he was cured by no other antidote than the study itself of that learning. Do romember, my young friends, that he who once styled Wilkins, the translator of Bhagavad Gita, "Sanskrit-mad" and the Asiatic Miscellany, "a repository of nonsense", and the Institutes of Akbar, "a dung-hill in which, perhaps,

^{*}Colebrooke's Essays Vol. I. p. 11B.

S Colebrooke's Resays Vol. I. Memolr pp. VII, VIII.

a pearl or two might bo found," became afterwards such a zealous crientalist, the first to light the torch of Vedic studies.

About twenty years lator, a Gorman, Friedrich Roson, rocegnized the true worth of this Vedic literature in the rich cellection of Vedic MSS, mostly made available through the efforts of Colebrooke. He undertook with zeal the efforts of the eldest work viz. the Rigveda, but died in 1837 before the first eighth was published, as "Rigveda Samhita, liber primus, Sanskrite et latine 1838".

It was in the year 1846, that a real, enduring impulse was given to the study of Voda, which saw the small but epoch-making work by Rudolph Roth,- Zur Litoraturo and Goschichte dos Voda'. "It inaugurated a movement which since then has irresistibly led all Sanskritists to the Veda."* This Roth occupios a uniquo pesition in the lilstory of the Vedic studies. He gave an absolutoly new turn to its course and is regarded as the founder, as it wore, of the inductive and historial method, in that domain. The St. Petorsburgh Sanskrit-Gorman Loxicon in 7 volumos, marks an era and amply testifies to the indefatigable zeal and industry of Roth and Bæthlingk. In this stupendous dictionary every word is traced from the oldest to the latost work of literature, from the Rigveda down to classical literature, and the different meanings classified which the word pessesses at different stages of its oxistonce. All the passages where a word occurs have been brought together and

^{* &#}x27;Rigveda' by Kaegi, p. 2.

thence by comparison its meaning is fixed. In this dictionary, of which Sanskrit must be very proud, we can, as it were, see the history of every word from the period when the Aryans first settled themselves in the land of the seven rivers, to the period which saw the bloom of the most elaborate and artificial classical literature. Almost all works then available have been drawn upon. No student of Rigveda can do without this dictionary in which an article, as it were, has been devoted to about every important word. The Vedic part was taken up by Roth, whereas the post-Vedic was taken up by Bœ-thlingk.

Next came A. Weber, another great German Orientalist, who gave a detailed and valuable survey of the Vedic books, in his "Academische Vorlesungen über Indische Literature geschichte" 1852. His 'Indische Studien' is a romarkable repository of oriental learning in all its branches, Veda, philosophy, grammar, lexicography and so on; and though the conclusions at which he arrived may be sometimes wrong still the work done and its extent and the author's versatility cannot but fill us with wonder and admiration. His 'History of Sanskrit Literature' translated into English is well-known to the Sanskrit students at the B. A.

From Weber we pass on to another genius, the highest in the field of oriental learning of our time, I mean, Max Miller, whose name will be ever remembered by Sanskrit students. A man of wonderfully versatile genius, he has written numbers of volumes on almost all the branches of the oriental learning, Vedic exegesis, comparative philology comparative mythology,

philosophy, grammar and so on. His locture-system, and the lucid flow of language which generally charactorisos his writings, has contributed to popularise Sanskrit loarning; but abovo all, what stands foromost in his writings is the sympathising spirit with which he is actuated. No literature can be properly studied or under stood or criticised unless you first road it with sympathy; and this sympathy is the most conspicuous trait of Max Miller's. Here I may quote what Prof. Bloomfield says of him* "The Hindus called him Mokshamúlara, during his latter days. It happens that Moksha is the Sanskrit word for 'Salvation' and Mula moans 'root'. To the Hindus his name means 'Root-of-Salvation', or as wo might say, with a different turn, 'Salvation Müllor.' I do not imagino that Müller believed in the Hindu salvation, which is release from the chain of lives and deaths in the course of transmigration. But if freedom of mind partakes of the flavour of Salvation, 'Salvation Miller' he was. Max Miller's eminence as a scholar and writer is woll-known to you; less gonerally well undorstood, perhaps, is the liberalising quality of his thought, which he exercised untiringly during more than half a century. Among Europeans he was pre-ominent for the spirit of sympathy and fairnoss which he brought to the study and criticism of Hindu religious thought."

Is it not very curlous indood that the editio prinseps of the whole of Rigveda Samhita, the oldest and the most highly valued work of the Hindus, with the

[&]quot;Religion of the Veda'-Bloomfield. p. 54.

commentary of Sayana should have been edited in England by a German Professor? Yet it is quite in keeping with the phenomonon of the destinies of millions of Hindus being entrusted to the care of Englishmen so far removed from each other, not only in distance but in spirit, and temperament, customs and habits. However, there is nothing strange in all this when we remember the fact that we all come from the same Indo-European stock, as has been proved now conclusively on grounds of comparative philology and comparative mythology. This edition of Rigveda placed the Vedic studies on a firm foundation, and since its appearance, they have progressed with wonderful rapidity. Ancient Sanskrit Literature' is another monumental work, in which Max Müller takes a detailed survey of the Vedio literature, and it is an authority even to this day, notwithstanding the mass of new information brought to hand since then. Of course we may not agree with the learned scholar in all his conclusions, for many of which his highly poetic temperament was responsible, as for instance, his estimate of the contents of the Rigveda and its age; still the book has rendered valuable service to the cause of Vedic studies by the detailed information it gives in a systematic and interesting Towards the interpretation of the Rigveda text also, he has made many contributions.

Next is to be mentioned the Original Sanskrit Texts' by Muir in 5 volumes. Nothing can surpass the industry and grasp of this scholar, the wide range of literature which he draws upon, the marshalling of facts and

the deducing of conclusions therefrom. These volumes are a repository of loarning to the Sanskrit student, who will find therein all important passages, with their translation into English, from Rigveda down to Purahas and epics, boaring on any particular idea, followed by the views of different eminent scholars on the same. To quote the author's own words*. "In treating the several topics... I propose in each case, to adduce, first any texts bearing upon it, which may be found in the hymns of the Rigveda; noxt, those in the Brahmanas, and thoir appendages, and lastly, those occuring in any of the different classes of works coming under the designation of Smriti. (It is to be remembered here that the term Smriti, according to Muir, includes (1) the Vedângas such as Nirnkta, (2) the Sútras or aphorisms, Srauta and Grihya, (3) Institutes of Manuand (4) The Itihasas and Puranas.) By this means we shall learn what conceptions or opinions were ontertained on each subject by the oldest Indian authors, and what were the various modifications to which thoso ideas were subjected by their successors." The topics treated are very various; o. g. the origin of the four castes, the mutual relation of Brahmans and Kshatriyas, affinities of the Indians with the Persians, Groeks and Romans, on the evidence of language, the origin and authority of the Vedas, Indian Mythology, society and life in the Vedic age and so on. I have no hesitation in recommending those books strongly to every student of Rigveda especially as they touch

[•] Muir's Original Sanskrit Texts Vol. I. p. 6.

reviewing thom and drawing conclusions therefrom, without at the same time causing us the trouble of finding out references, all the texts in question being fully quoted in their original form.

Dr. Haug's edition of Aitaroya Brahmana doserves a mention hore, ospecially on account of the nico and informing introduction affixed to it, though his view that Yajurveda must be older in character than Rigveda has not secured many followers.

Here is the place to mention the several translations of the Rigveda. The oldest is that by Wilson whose name must be remembered in the domain of Sanskrit Scholarship. Wilson's Hindu Thoatro and translation of Vishnupurana are too well-known to be mentioned hore. And we have nothing to do with them here. His translation of Rigveda is the first attempt of its kind, highly usoful in his day, though its value today is much marrod. The difficulties in his way were, no doubt, insurmountablo, out of rogard for the condition of Vedic studies in his times. Wilson was of opinion that the sacrod books of the Hindus can be best interpreted by him who has imbibed the Indian spirit; that the native commentators were best qualified for the task and that a foreigner notwithstanding his impartiality and desire to know the truth is very likely to carry his own prejudices into his work, which may bo opposed to the spirit of the original. Thus he thought that in the absence of any better Indian commentary, Sâyana's commentary on the Rigveda was the bost interpretation, more correct than any coming from a European scholar. Honco ho translated the hymns of the Rigveda just as they were interpreted by Sâyana. Thus the translation though useful in its own way, especially for understanding Sâyana where he is obscure or ambiguous, has lost much of its authority in the light of the later researches in the field of Vedic study.

Two German translations of Rigvoda by Ludwig and Grassmann deserve to be noticed here, the former being prose and the latter being metrical. Both these scholars had a gigautic task before them, which they have creditably succeeded in performing. No doubt many times they propose fanciful interpretations, and they are very readily prene to effect amendations and alterations, which are sometimes not only unnecessary, but absolutely wrong, and shocking. They proceed with the belief that native interpretations are as a rule bound to be wrong and uncritical, and their impatience to apply the se-called historical and critical method has sometimes landed them into curious conclusions. We can not fellow the translations whelesale though they are clearly pervaded by the spirit of criticism.

Grassmann's Dictionary of the Rigveda (Sanskrit-German) published in 1873-75 is a very useful little book which every student of Rigveda should be in possession of. Herein under every word he gives all the passages without exception in the ten books of the Rigveda, where the word occurs, classifying them according to the different stages of meaning which the word in question passes through.

Kaegl's essay on the Rigvoda (1880) also translated into English, is a modol essay briefly surveying the

contents of the Rigveda and extending over a hundred pages (quarto). It is written in a vory lucid stylo and the tone throughout is sober and reasonable.

Vedische Studien in throo volumes by Geldner and Pischel are direct contributions to the Vodic oxegesis. They are the fruit of the long-continued study of the Veda by the authors, and the method of study can be best learnt therefrom. Most of the important words in the Rigyoda hymns, whose meaning is obscure or doubtful or about which scholars differ, have been taken up for discussion and traced through not only Vedic passages but also through works allied thereto. important hymns have been solocted for study. They have been translated and notos on words and syntax have been copiously added, thus actually showing how you arrive at the particular translation. Some interesting logends like that of Urvasi and Purnravas havo been traced historically. In briof, the book is such as a student of Rigveda can never dispense with. authors are sane critics avoiding oither extreme, neither too orthodox nor too rationalistic, giving duo credit to Sayana where he is quite right and generally recognizing the value of his contributions to Vodic interpretation.

Here I may mention also Whitney's grammar, which was the first to take cognizance of the Vedic idiom along with the classical. All other grammars only dealt with the classical Sanskrit; but Whitney attempted to treat the language and the grammatical forms historically. Thus in every chapter or department of grammar he mentions the forms which a particular

inflexion shows in Rigvodn, the Bráhmanas and works allied thereto. Thus, for instance, if you look to the declension of words ending in अ, you will find that immediately below the classical forms, the Vedic forms like देवास:, देवास:, युगा etc. are mentioned. The chapters on account are also very useful. Thus Whitney's grammar serves a purpose which cannot be served by any other book available up to now.

Prof. Oldenberg, a great Vedic scholar, has laid the Vodic student under great obligations by his regular commontary on the whole of the Rigyoda Samhitá very recently published in two volumes. Therein, ho takes for consideration every hymn, and deals with all peculiarities, motrical, grammatical oxegetical and so on, generally introducing them with some general romarks whore necessary regarding the relation of the hymn to others or any particular traits which may be worth noting. What rondors the work highly useful is the copious reforences to other troatises dealing with Rigveda, in Gorman, French and English. Thus in brief, in Oldenberg's commontary, we have presonted to us in one place, all that has been said on a particular vorse of the Rigveda or any particular word of interest therein.

Much more has been done by way of papers and contributions, dealing with particular topics connected with the Vedic exegosis, for which you will have to refer to the numbers of the journals of the German Oriental Society, the American Oriental Society, and the Royal Asiatic Society of Great Britain and Iroland. I may mention amongst others, such treatises as Prof.

Lauman's Noun Inflection in the Veda, Dr. Arnold's Vedic Metre and Bloomfield's American Lectures on the Roligion of the Veda.

In a new field of study like the Vedic exegesis, much plodding work has to be done in the beginning without which the progress of students is very much hampered. Thus Bloomfield's Concordance to Rigveda, the very recently published Vedic Indox by Prof. Macdonel and Dr. Keith, are works of this character, clearly testifying to the patience and perseverance of European scholars.

Coming over to India, we may mention an attempt to interpret Rigveda on modern lines by the late S. P. Pandit, who in his Vcdarthayatna, aftempted to begina rational interpretation of the toxt, with translations in Marathi and English, supplemented with notes explanatory and critical. The attempt was very promising, indeed, but scarcely had Pandit proceeded as far as the 3rd Mandala when he was suddenly carried away by the hands of death, and the work thus interrupted by Pandit's premature death, has not been taken up by any one.

Mr. Tilak's two books 'The Orion,' and 'Tho Arctic Home in the Vedas' have been original contributions to Vedic criticism, characterised as thoy are by a sobriety of judgment and a spirit of right criticism. In the former Mr. Tilak tries to prove on astronomical grounds that the date of Rigveda must be pushed back thousands of years and that it is not possible to acquiesce in the early date fixed by European scholars. In the latter, he tries to refute the current theory about the original

abode of the Aryans, who he thinks must have been in liabitants of the regions about the North Pole. I may here mention द्वातियोग which gives translations of Rigweda in English and the several vernaculars of India. Though it is serving a useful purpose by making the contents of our most sacred and ancient book accessible to the masses, still to the Vedic student as such, it is of great value.

LECTURE V.

THE WORK DONE BY THE ANCIENTS

in the field of the Study of Rigveda.

Explanatory passages in the Brahmanas—Pratianklyas—Nirukta of Yaska—The discussion about the meaninglessness of Mantras—The estimate of Yaska's service—Several explanations of one and the same word or passage—The Nairuktas—The Aitihasikas—The Yajaikas—The Naidanas—More faith without reasoning, not sufficient for interpretation—The work of Mimansakas—The Vedarthaprakasa of Sayanacharya—The theological bias—no continuity of tradition—occasional misunderstanding of the Vedar spirit—The invaluable service rendered by Sayana.

Next we have to consider the work done by the Ancients in the field of Vedic exegesis. If we go over the Brühmanas, which themselves form a part of the sacred canonical works, and bring together all those passages which contain explanations of Sarihitâ texts or derivations of words, of course, not for their own sake but for purpose of culogising the particular act of the ritual or for elucidating, so to say, the mystic relation between the act and the Mantra which accompanies it, we shall have before us a large mass of material, which serves as contributions to the Vodic interpretation. Even to critical European scholars, such explanatory references found in the Brühmanas have proved of use to determine the meanings of words which are otherwise ambiguous and defy all attempts at explanation.

The Prâtiśâkhya works noticed above (in Lecture 2), are also attempts in the same direction, though they relate more to the text and orthography than to the regular interpretation. Works like the Sarvânukramanî of Kâtyâyana and the Brihaddevata are important from the point of view of the preservation of the text, only indirectly serving the purpose of Vedic interpretation.

First and foromost as a direct attempt to interpret the Vedic texts, stands the Nirukta of Yaska, than which no older work of the typo is known to-day. Of course, it is to be remembored that even this old work must have been far removed in age and spirit from the period of the Samhitas, as appears from the fact that Yáska often makes a two-fold distinction, while explaining the meanings of words. Thus, for instance, in the section on निपातंड, he remarks thus *- ' हपेति भाषायाङ्ख अन्यध्यायङ्च । अग्निरियेन्द्र इवेति । नाति प्रतिपेधार्थीयो भाषायास् । उभय-सन्बध्यायम्,' 'इव shows comparison both in the ordinary language of intercourse and in the Scriptures. F is a particle of negation in the language, but means both negation and comparison in the Scriptures.' Here the distinction of the language of the scriptures or the Vodas (including both Samhitâs and Brâhmanas) and the language of intercourse in vegue at the time, is clearly moant. The language of the day must have essentially differed from the Vodic language, in order to justify the necessity of such references. But the same fact is proved beyond doubt by the discussion regarding the question whether the Maintras are pos-

[&]quot; Nirukto I. 4.

sessed of a meaning or not. On account of its great interest, I can not forbear quoting it here in full:—*
"Now, without this work, the meaning of the hymns can not be understood; but he who does not comprehend their meaning can not thoroughly know their accentuation and grammatical forms. Therefore, this department of science is the complement of grammar, and an instrument for gaining one's own object." Then steps forth Kautsa who proceeds to object thus. "If this Nirukta or the science of interpretation is intended to make the sense of the Mantras clear, it is useless, for the Mantras have no sense. This is to be considered as follows:—

- (1) The statements (in the hymns and texts) have certain fixed words, and a certain fixed arrangement.
- (2) The Mantras are endowed with their forms by the Brahmanas; thus:— 'Spread thyself widely out 'उरुपथा उरु प्रथस्वीर ते यज्ञपतिः प्रथताम्' वाजसः सं. I. 22—and so he spreads—उरुपथस्विति प्रथयति (शतपथ. आ॰ 1, 3, 6, 8).
- (3) They prescribe what is impracticable: thus-'deliver him, oh plant':--'Axe, do not injure him'-thus he speaks while striking.
- (4) Their contents are at variance with each other;—thus—'There exists but one Rudra, and no second;' And again 'there are innumerable, thousands of Rudras over the earth;' so also—'Indra, thou hast been born without a foc' and again 'Indra vanquished a hundred armies at once.'

^{*} Nirukta I. 15.

- (5) A person is enjoined to do an act with which he is already acquainted: Thus "address the hymn to the fire which is being kindled"—(This is said by the Adhvaryu priest to the Hotri.)
- (6) Again it is said—Aditi is everything, 'Aditi is the Sky,' 'Aditi is the atmosphere'.
- (7) The signification of the Mantras is indistinct, as in the case of such words as अस्यक् (Rig. I. 16.93), पाइदिमच् (Rig., V. 44-8.), जार्यापि (Rig., VI. 12-4), काएका (Rig., VIII, 66-4)."

To all these objections raised by Kautsa, Yaska replies as follows—"The Mantras have a sense, for their words are the same (as these in the ordinary language). A Brahmana says (Aitareya I. 4), 'what is appropriate in its form, is successful in the sacrifice'; that is to say, when the verse, To use, which is recited refers to the ceremony which is being performed. (An example of the identity of the Vedic language with ordinary speech is this—'who are etc.' (sporting sons and grandsons).

1. As for the argument about the fixity of words and their arrangement, this is the case in ordinary language also, c. y. इन्द्राग्नी, पिताइबी &c.

2. As for the Mantras being endewed with their form by a Brahmana, the Brahmana is a more repetition of what has been already said in the Mantras.

3. As for the prescribing of something impracticable, it depends on the statements of the Scriptures, whether an act is दिसा or आईसा.

4. As for the contents of the Mantras being at variance, the same thing occurs in ordinary language

also; thus—'this Brahmana is without a rival', 'The King has no enemios'.

- 5. As for the enjoining of something with which a man is already acquainted, people are in the same way saluted by their names, though they already know them; and the ngué (a dish of curds, ghee and honey) is mentioned to those who are well acquainted with the same.
- 6. As for the statement 'Aditi is everything', the same thing is said in common language also; thus—'All fluids or flavours reside in water.'
- 7. As for the indistinct signification, it is not the fault of the post, that the blind man does not see it. It is the man's fault. Just as in respect of local usages, men are distinguished by superior knowledge, so, too, among these learned men who are skilled in tradition, he who knows most is worthy of approbation."

From this discussion, it is quite evident that in the days of Yaska, the meaning of the Mantras had become obscure; what is more is that such questions as whether the Mantras are meaningless or not wore boldly raised and discussed, although केंद्र may be merely a man of straw viewed as a fictitious Devadatta, used as a device only to teach more improssively, as the commentator Durga understands, or some real Rishi representing some school like other निरुक्तकार referred to by Yaska, as European scholars conjecture.

The very fact of the existence of the original निघण्ड on which the निहस्त is a commentary points to the conclusion that the sense of many of the Vedic words had been commonly forgotton. For, what occasion was there for compiling vecabularies of Vodic words, if the sonse of these words had continued all along familiar to the students of the Vedas? The same thing is also clear from many passages in Yáska's work, in which he attempts to explain Vedic words by their etymologies (a process often tentative, which would have been unnecessary if their meanings had been perfectly known), or in which he cites the opinions of different classes of interpreters who had preceded him, and who had severally propounded different explanations.

Whether there was any regular tradition of Vedic interpretation preserved through all this period which must have clapsed between the Maitras and Brahmanas on the one hand and the Nirukta on the other hand, it is very difficult to decide in the present condition of Vedic learning. Though the Indian commentators like Yaska may not be regarded as infallible, still they can not be altogether set aside, as the help they render is simply invaluable. They are not merely frenzied persons propounding fancied interpretations without the slightest show of authority.

I quote hero Roth's remarks in this connection:—
"Vedic interpretation could impose on itself no groater obstruction than to imagine that the Indian commentators were infallible, or that they had inherited traditions which were of any value. Even a superficial examination shows that their plan of interpretation is the very opposite of traditional, that it is in reality, a grammatical and etymological one, which only agrees with the former method in the orreneous system of explaining every

verse, every line, every word by itself, without inquring if the results so obtained harmonize with those derived from other quarters. If the fact that none of the commentators are in possession of anything more than a very simple set of conceptions regarding e. q. the functions of a particular god, or even the entire contents of the hymns which they are continually intruding into their interpretations, be regarded as a proof of their having inherited a tradition, it will at least be admitted that this povorty of ideas is not a thing which we have any reason to covet. In this set of conceptions are included those scholastis ideas which were introduced at an early period, indeed, but not until the hymns had already become the subject of learned study, and the religious views and social circumstances on which they are based had lost all living reality.......What is true of Sayana, or any of the other lator commentators, applies essentially to Yaska also. He, too, is a learned interproter who works with the materials which his predecessors had collected, but he possesses an incalculable advantage, in point of time over those compilers of detailed and continuous commentaries and bolongs to a quite different literary period; viz. to that when Sanskrit was still undergoing a process of natural growth."

I am not prepared to go so far as to assert that Yaska's explanations are altogether without the basis of tradition. Although there are several instances where the derivations proposed appear to be fanciful, still in a large number of cases, Yaska's remarks are followed by 'इति ह नाइणम्' or 'इति विज्ञायते' which shows that Yaska

had in viow some old authority in the ferm of a Brâhmana passage. It is unfortunate that we can not trace back all such instances to their original, ewing to the fact that many a Brâhmana are lest, though their existence ence is beyond doubt, ewing to their being mentioned several times.

What sort of explanations and interpretations are attempted in the Nirukta, can be judged from the instances given below. In Nirukta II. 16, Yaska refers to the opinions of various fermor schools regarding the meaning of the word Vritra—

"तत्का द्वः। मेप इति नैरुक्ताः। त्वाह्रोऽ हर इत्यैतिहा सिकाः। अपां च ज्योतिपश्च मिश्रीभायकर्मणो वर्षकर्म जायते। तत्र उपमार्थेन युद्धयर्णाः भवन्ति। अहिवत्तु खल्ज मन्त्रयर्णाः ब्राह्मणवादाश्च। विद्यन्त्वा श्रारीरस्य स्नोतां-सि निवार्याचकार। तस्मिन्हते प्रसस्यन्दिरे आषः।"

"Who was Vritra? 'A cloud', say the Nairuktas (etymologists). 'An Asura, son of Tvashtri' say the Aitihāsikas (stery-tellors); the fall of rain arises from the mingling of the waters and of light. This is figuratively depicted as a conflict. The hymns and Brāhmaṇas describe Vritra as a serpent; by the expansion of his body, he blocked up the streams. When he was destroyed, the waters flewed forth."

Then again Yûska, in Nir. III-8, alludos to the views of older writers regarding the Vedic word pancha jana.

Thus we see that several older interpretors of the Vedas, both classes and individuals, are frequently refer red to by Yaska though, unfortunately none of their works are available. Of these, the Nairukta is the most general name, meaning the old expounders of the

Veda, of the same type as Yaska himself, mainly taking their stand on etymological derivation. The Aitihasikas who are generally referred to, while noticing differences in the conceptions of the Vedic gods, are those interpreters who take the enhemeristic viow, according to which the gods of mythology wore generally deified mortals and their deeds the amplification in imagination of human acts. In addition to the exposition of the Veda in the stricter sense, there existed also liturgical interpretations of numerous passages such as we find in the Brahmanas and other kindrod treatisos, in which it was attempted to bring the lotter of the received text into harmony with the existing ceremonial. Such liturgical interprotations are called by Yaska, those of the Yajiikas or persons skilled in sacrificial rites. Akin to theirs appears to have been the modo of interprotation adopted by the Naidanas. By this we must probably understand that method of explanation which, differing from the gramt matical etymologies, referred the origin of the words and conceptions to occasions which were in a certain sense historical.

I can not take leave of Yaska without quoting the following passage, in translation, from the 12th section of the 1st Parisishta, which refers to the antiquity of the Mantras and the qualifications necessary for expounding them.

"This reflective deduction of the sense of the hymns is effected by the holp of sacred tradition and reasoning. The texts are not to be interproted as isolated, but according to their context. For, a person

who is not a Rishi or a devotoo has no intuitive insight into their meaning. We have said before that among those men who are versed in tradition, he who is most learned, deserves especial commondation. When the Rishis were ascending, men inquired of the gods, 'who shall be our Rishis?' The gods gave them for a Rishi the science of reasoning, the art of deducing by reflection the sense of the hymns. Therefore, whatever meaning any learned man deduces by reasoning that possesses authority equal to a Rishi's."

Though this passage belongs to a chapter called परिशिष्ट or supplementary, and is regarded by Roth to be the work of some author subsequent to Yaska, still it is sufficient to establish the fact that the ancients distinctly recognized the necessity of reason as a cofactor in the ascortainment of roligious truth or the definition of coromonial practice or the interpretation of Important or obscuro scriptural passages. That the ancients had at least an idea of the new comparative method of interpretation, follows from this, whother they could actually use it in practice or not, is a different question. This passago marks a stago of thought when more faith was found to be insufficient and unconvincing without reason, a viow most omphatically. expressed by Sankaracharya afterwards, as opposed to the Sankhyas, Naiyayikas whose view is virtually, if not avowedly, founded on reasoning,

Panini's grammar, as noticed already, mainly deals with the classical Sanskrit and treats the Vedic idiom

and that it altogether fell into disuse in later sanskrit.

Sankarâchârya has written regular commentaries on all the principal Upanishads which, no doubt, belong to the Vedic canon but we are not immediately concerned with them. It is only occasionally that passages from the Samhitâs are interpreted by him, in the course of his argumentations, in his great Bháshya.

The pûrva-mimûnsakas have mado several contributions to the Vedic exegesis; the very object of the Mimansa, as Colebrooke says, is the interpretation of the Vedas. "Its purpose" says Somanatha in his Mayúkhamûlâ, "is to detormine the senso of revelation." But the rules and canons which they lay down, refer more to the application of the liturgical texts, and the ascertainment of the relative importance of texts when mutually inconsistent. The Vedic interpretation proper, they do not concorn themselves with. However, to give you some idea of these rules laid down by the Mimânsakas, I may quote here one such canon which is very frequently referred to in sanskrit works. runs thus--* ' श्रुतिलिंगवाक्यप्रकरणस्थानसमाख्यानां समवाये पार-दौर्नरयमधीविषकपादिति।' Direct montion, a mero indicatory mark, a sentence, context, order or place of mention and etymology, when any of those circumstances referring to the same text, lead to inconsistent conclusions, every following circumstance is weaker than every preceding one and thus must yield to it,

^{*} Jaimini Sütra. III. 3.

tions, however, to the Vedic exegesis are by the great Savanachárya, to whom Vedic students can never be too highly thankful. Vedártha-prakásá is a rogular, dotailed commontary on the Rigvoda Samhita from beginning to ond, with a vory informing and learned introduction. Sáyana was the minister of Bukkaraya. the King of Vijayanagar, now lying in ruins, near Hampi on the Tungabhadra river, in the Bellary district. Bukka and Harihara who succeeded him, were brothers, who throw off the Mahomedan yoke and founded the empire of Vijayanagara, about the middle of the 14th Contury A. D. It was under the patronage of these princes that Sayana and his brother Madhava who was looked upon as Guru by the princes, did all their literary work and set allout a highly surprising literary activity. Sayana also wrote a commentary on tho Aitaroya Brûhmana and Aranyaka, on the Taittiriya Samhita and so on. Madhava afterwards called Vidyáranya Swámi is tho author of the well-known Spryadarsána-Sangraha or a compendium of all the philosophical systems, as well as of Panchadasi the most popular metrical treatise on Sánkara Vedânta.

In the Vedårthprakåsa, the commentary on the Rigvoda, Såyana has paraphrased each and every word in the text, pointing out all grammatical peculiarities, giving etymological derivations of difficult and new words where possible, at the same time explaining the liturgical application of each and every verse or we. That this commentary of Såyana is full of defects from the modern point of view can not be denied. The

historical sense could not be prosont to his mind, on account of the view about the contents of the Rigycda, which he held. To him, the Rigyeda, along with all other so-called canonical works called Veda, was a work, a store of wisdom, secular and philosophical, whose authority was not to be questioned. Every word of it was sacred. Naturally he could not entertain the idea of applying the rules of criticism to it, which were reasonable in the case of any other human composition. And again, the theological point of view swayed very strongly with Sâynna. The Samhitâs mainly dealt with ritual, or at least were meant for application to ritualistic ceremonies, and throughout his explanations one can ensity mark out the theological bias. At the beginning of every hymn Sayana, before commencing to paraphrase the actual toxt, first states the name of the sacrifice or the offering to which the hymn or its verses are subservient or at which thoy are to be recited.

Coming to actual textual explanations, we are struck with the impression that no living tradition relating to Vedic exegesis was present to the mind of Sâyana. Whenever a word is obscure, we do not have a satisfactory explanation from him. In such cases, he generally proposes more than one explanation, without showing his proference to any one of them. Sometimes he has recourse to many curious devices in such cases of difficulty e. g. understanding any case form to have the meaning of any other case form, or connecting a verb with a subject without agreement in point of person or number.

भात्नामतेकार्थत, or the doctrine that a root can have more than one meaning is brought in by him to serve his purpose, times without number. Then again Siyama sees no objection to explaining words in an isolated manner, without caring to see whether the particular meaning which he assigns to the word in the particular passage, holds good in other similar passages where the word occurs in a similar connection. Like Yaska, he depends mainly on etymological derivations, and he has no scruple sometimes to take as implied or understood any word or words to complete the meaning of the sentence, when once he has started with it.

He frequently refers to the Sarvanukramani, Brihad-devata, passages from the Brahmanas and Aranyakas; and as a rule he quotes fully the explantations of Yaska, wherever possible, beginning with the remark ' अन विकत्त्र'. The Vedie myths he explains in the light of later Pauranic ideas with whose influence. of course, he is strongly imbued. So also, while explaining the occasion of certain hymns, Sayana quotes legends which are absolutely incongruous with the spirit of the Rigveda. One instance would suffice to give you an idea as to how the Vedic spirit was altogether forgotten or most wantonly misunderstood in later times. Of course Sâyana is not to be held solely responsible for this, as this sort of misunderstanding had set in even as early as the Brahmanas. In hymn X. 121, beginning with हिरण्यगर्भः समवर्तताग्रे etc." the refrain of every verse is 'कस्मे देवाय इविपा विधेम,' which literally translated, should mean, 'what god should we worship, with an offering or oblation? 'a simple quespoworful god. A yearning of the human heart to search after that god who, being the beginning of the world, and the first germ and the shaper of all life, reveals himself all ever in nature. He sees the divinity in its manifestation new here, new there, and again and again he always asks, doubting, seeking, and longing, "who is this god to whom we present our offering?"

Now let us soo how Sayana has explained the word करमे. In the very introduction to the hymn, he remarks, 'कक्षशामिषयः प्रजापतिर्देवता'. Every hymn, nav, overy verso especially having reference to a sacrifico. must have a doity. In order to discover a doity where no deity existed, the most extraordinary objects, such as a prosent, a drum, stonos, plants, wore raised to the artificial rank of doities. In accordance with the same systom, Sayana hore (and ho has the support of the Bráhmanas,) forgetful of the proper character of the hymn and of the doep longing of the post for the unknown God, exalts the interrogative pronoun itself into a doity and acknowledges a god or who. his commentary on the first verse, S. romarks;-

अन किंशहोऽनिर्ज्ञातस्यरूपत्यान् बजापती वर्तते। यद्वा सध्यर्थे कामयते इति कः । कमेर्डप्रत्ययः । यहा कं छुत्तं तहूपत्वात्क इत्युच्यते ।अ-थवा इन्द्रेण पृष्टः प्रजापतिर्मेदीयं महत्वं तुभ्यं प्रदाय अहं काः कीह्यकाः स्या-मित्युक्तवात् । स इन्द्रः पत्युचे यदीवं बवीषि अहं कः स्यामिति तवेव त्वं भवेति। अतः कारणात्क इति प्रजापतिराख्यायते. Thus we hero four different explanations. have The idea that these ancient hymns were writton simply for the sake of their sacrifices and that whatever interpretation they thought fit to assign to those acts must be borne out by the hymns, has vitiated the whole system of Indian exegosis. It might be justified perhaps, if it had only been applied to the purely sacrificial hymns, particularly to those which are found in Samhitás of the Sáma-veda and the Yajurveda. But the Rigveda, too, has experienced the same treatment at the hands of our commentators, and the stream of tradition flowing from the fountain-head of the original poets has, like the waters of the Saraswati, disappeared in the sands of a desert. Not only was the true nature of the gods, completely lost sight of, but new gods were actually created out of words, which were never perhaps intended as names of divino beings as wo see in the instance given just above.

So far I have pointed out the defects in Sáyana's work from the modern and critical point of view. But I have not yet told the whole truth. There is another side to the picture. Can we imagine what would have been the condition of Vedic scholarship to-day, without this Vedárthaprakása of Sáyana? Then only its full worth can be realised. The great Vedic exegosist of the 14th century has left no word unexplained how-soover obscure it may be. Though it is very easy to criticise his work, still every Vedic scholar must confess that without him no beginning even of the Vedic study was possible. I can not do better than quote an extract from Max Müller's preface to his Vedic hymns part I. p. XXX, "It is well-known to them who have followed my literary publications that I never enter-

tained any exaggerated opinion as to the value of the traditional interpretation of the Veda, handed down in the theological schools of India and preserved to us in the great commontary of Sáyana. More than twenty years ago, when it required more courage to speak out than now, I expressed my opinion on that subject in no ambiguous language and was blamed for it by some of them who now speak of Sayana as a mere drag in the progress of Vedic scholarship. Evon a drag, however, is sometimes more conducive to the safe advancement of learning than a whip; and those who recollect the history of Vedic scholarship during the last five and twenty years know bost that with all its faults and weaknesses, Sáyana's commentary was a sine quá non, for a scholarlike study of the Rigveda. I do not wonder that ethers who have mero recently entered en that study are inclined to speak disparagingly of the scholastic interpretations of Sáyana. They hardly know how much we all owo to his guidanco in effecting our first entrance into this fortress of Vedic language and Vodie religion, and how much even they, without being aware of it, are indebted to that Indian Eustathius. I do not withdraw an opinion which I expressed many years ago and for which I was much blamed at the time, that Sayana in many cases teaches us how the Veda ought not to be, rathor than how it ought to be understood. But, for all that, who does not know how much assistance may be derived from a first translation, oven though it is imperfect, nay, how often the very mistakes of our predecessors holp us in finding the right track? If now we can walk without Sáyana, we ought to bear in mind that five and twenty years age, we could not have made even our first steps, we could never at loast have gained a firm feeting without his leading strings. If, therefore, we can now see further than he could, let us not forget that we are standing on his shoulders."

But things have grown much brighter for Sáyana. A positive worth is discovered in Sayana's work by Vedic schelars like Goldner and Pischel; and in many cases it is Sayana who hits upon the right and the only right meaning of a word or a passage, though of course no earnest seokor after truth would attach any worth to his grammatical and etymological artificial dovices. We may take one instance to illustrate the truth of this. Roth-who was the first to come forth against conservative Sanskritists and to assert that any European conscientious oxogesist can understand Veda better and merc correctly than Sayana-remarks that all the Indian commentators explain the word stre as 'water'; whereas, the word roally must mean quite the opposite, i. o. 'land'. New this is not quite correct. No doubt Sayana, in many of the passages in. Rigveda where the word occurs, explains it as ' saw'. But in X. 27. 21, he explains the word uffere as utant अवहलानू, thereby hitting upon the original meaning of the word even more correctly than Roth himself. sfix means 'erb', a 'circle' and is thore used to denote. just like the word HUEB, 'region', 'demain', 'land' 'earth' as opposed to the 'sea or ocean.' While Sayana in Rigvoda I. 163, 1, explains द्विषान् वह 'सर्वकामानां पुरकाद-

ol doubt this very much even to-day.

द्कात्', in the same verso, however, as it occurs in Taitt. S. 4, 2, 8, 1, he oxplains it as 'प्रत्वचितसंपद्मान्महताऽव्यात' and Mahidhara explains it as 'प्रशाः सकाशात' in Vajas. S. 29, 12. In Rigveda V. 55. 5, S. explains प्रशिषणः as 'प्रशिषं उदकं हे सहन्तः', while in Taitt. S. 2, 4, 8, 2, 'पोश्चयतान् भूपदेशान् '. In Taitt. S. 4, 3, 1, S. says, 'प्रशिषशब्देन नवादिगताः सिकता उच्यन्ते.' In the same way Mahidhara explains the word in Vaj. S. 13, 53, who never seems to give the meaning of water but paraphrases it always as प्रक, प्रण, प्रकं वस्तु ; while on Vaj. S. 11, 44, he says—'प्रशिषशब्देन पांश्चल्पा प्रदच्यते.' Thus we see here, that the meaning which Roth gives to the word प्रशिष was well known to Indian Scholiasts and was accounted for in a more correct manner.".

It was remarked above that there appears to be no unbroken tradition of Vedic exogesis; and this distinctly follows from the fact that S. in a large number of cases proposos a number of dorivations of one and the same word. He simply gives the views sometimes of old learned exegesists. He mentions several schools and works, but unfortunately he does not throw any light upon the exact sources of information of which he makes use in his own interpretation of the Veda. Thus he has made use of Bhattabháskaramisra, Skandaswámin, Kapardi Swámin; he also refers to नेस्वता: सात्रामिका:, पोराणिका:, साञ्चिका:, संप्राचिका:, आस्मिविदः, उत्साचिका:, पोराणिका:, साञ्चिका:, संप्राचिका:, अपरे केचन, and ushers in different views with such words as अन्य आह, काश्विदाह.

See Vedische Studien Vol. I. Introd. p. VI.

There are several other commenatries on Rigveda montioned, but we know nothing exactly about them. Thus there are रावणभाष्य, कीशिकभाष्य, ग्रहाथरत्नमाला वेवराज in his commontary on Nirukta, also mentions the वेदभाष्याणि of भवस्वामिन, राहदेव श्रीनिवास, माधवेदव, all of whom seem to be older than Sáyana.

महीपर and उपट are the great; and equally important commentators on Yajurveda, but we are not concerned with them here except when we have to refer to their interpretation of verses common to both Rigveda and Yajurveda. To the Vaidika Brahmins of this day, the credit of preserving the text in a wonderfully correct manner is due, but towards Vedic exegesis they have contributed nothing.

LECTURE-VI.

THE METHOD OF STUDYING THE RIGVEDA.

The method is everything—The right spirit of searching after truth—The object of including Rigyoda in the curriculum—The orthodex view—the historical stand-point—wanting the spirit of inquiry—the historical and comparative method—the gelden mean—a concrete illustration of the method—the words and and an in the Rigyoda.

So far I have given you some idea of the work done by ancient and modern scholars in the field of Vedic exegesis. Now I should like to make a few remarks on the method of studying Rigveda. Method is everything in every branch of study, but more so in the matter of the study of Rigveda. At school and at college you study several subjects not so much to bear the results or the concrete facts in mind, as to receive a particular training of the intellect and emotions, which object is gained not by the mechanical oraniming of facts but by the particular method which has been inculcated in your mind and which has become a habit with you. The spirit of an honest sourch after truth is the chief thing in all education. To collect facts with accuracy, to shift them with a spirit of honest inquiry, criticise them with a liberal broad-mindedness. not allowing yourself to be influenced by unreasonable patriotism or unnecessary bias, at the same time trying to understand the tradition if any, with due sympathy and then only to draw a conclusion where possible, this is the habit without which no one can be a scholar, especially in the field of the study of Rigveda. And it is with the object of engendoring this habit, that Rigveda is included in the curriculum of our University. It may be even of some use to commit to memory the meanings of some words and the translation of some verses; but that is not all. If you have not acquired patience and perseverance in the search after truth with an unprejudiced mind, well then the time you have spent in the study of Rigveda is a mere waste.

The orthodox Pandits regarded Veda as a revolation. The primeval sages like Vis'vâmitra and Vasishtha, Gritsamada and Atri had Dharma revealed to them while it was their only task to communicate it in the same form to others. As such the highest wisdom was contained in it, whose authority was not to be questioned. So far it was alright. But the predominance of elaborate ritual exerted undue influence over the interpretation. of the Vedic texts which wore sololy regarded as subservient to that purpose. The theological standpoint of view prevailed and the only available full commentary on the Rigveda was written by a theologian of the first water. The historical standpoint was absolutely wanting. When we examine the contouts of Rigveda by themselves, we may easily see that it cannot be one book written by one man, but that it is a library, or literature in itself. This idea was not at all recognized by Sâyana, which mars a good deal the value of his work.

Nor is it possible that there was any unbroken tradition carried on till the time of Sayana as proved above. Sayana scarcely waits to ask himself whether the meaning which he proposes for a particular word is justified by other observances of the word in other passages. The spirit of questioning is wanting. Hence dogmatic assertions are made, without any qualification. He could not be content with leaving a question open, even though there be not sufficient material to arrive at a decision.

When, however, European scholars proceeded with the study of the Rigveda, they proceeded naturally with a spirit of enquiry. But even amongst them there was once a school of the so-called conservative Sanskritists, headed by Wilson who held that Shyana's commentary was the only safe guide through the intricaeles and obscurities of the text. Against these there stepped forth Roth, who revolutionised the whole thing and may be credited with having laid the foundation of the modern Vedic scholarship. He brought tho Western methods to Eastern learning. Induction and comparison were the guiding principles of his method. The Rigveda was treated historically. He brought together the several passages where a certain word occurred, classified them, and fixed upon the stages through which the word has passed and thus gave, as it were, a history of the word from beginning to end. No prejudice, no misguided patriotism could blind him. But Roth went to the other extreme in his zeal to combat the conservative Sanskritists. He was too prone to conjecturing. Having no faith in Indian commentators as a class, in his zeal to demolish the edifice of tradition, he raised a structure based upon sheor reason, one projudice taking the place of another. Many of Roth's explanations are thus now found to be not convincing, if not totally wrong, though no doubt the credit of first raising the curtain in the drama of Vedic exeges is his.

As, however, the study of the Vedas advanced more and more, the golden mean came to be followed. Due sympathy for traditional interprotations of Indian commentators, combined with the spirit of honest search after truth with pationee and intelligence has come to be the principle guiding the course of Vodic studies. I bolieve that the best and most effective means of bringing home to you the nature of this method is to take a concrete instance and to apply the method to it. I now propose to determine the meaning of the words and and which occur so frequently in the Rigveda. In the first place, to narrow our field, let us bring together all the passages in the 7th Mandala, where the forms of art and and occur, and see how Sâyana interprets thom.

अरि: as well as अर्थ: occur in VII. 64-3. Say. explains both, as अर्थमा, a god mentioned along with मित्र and करण and further remarks—' अर्थम्णः पुनरमिधानमाद्रार्थम्'

अरिमं--VII. 47-1--Sky. पापरहितम; अरिमा:--VII. 90-4-पापरहिता: ; Hero, in the latter passage (उपसः) it is to be noted that the Pada-patha has अरिऽमाः, though the word is interpreted as made up of अ and रिम, by almost all.

The form sign occurs in a very large number of cases in the 7th Mandala itself:--

8-1--nom. sing. स्वामी, हविषां प्रेरको वा S.; 21-5--nom. sing. स्वामी (इन्द्रः) S., 21-9--gen. sing.--अर्थः अभीति अभि-गमनम् S., who does not give another word for अर्थः but evidently takes it to mean औरः; 31-5,--स्वामी (त्वम) S.; Here the word अराक्षा is also used by its side; 34-18-अरथः nom. plu. S.; 48-3, L. 2--अरीन S.; 48-3 L. 3--श्वमामभिगन्तारः S.; 56-22--औरः श्वीः सकाशात (वातारः) S.; 60-11--ईरयति स्तुतीः प्रेरपति इत्यरिः स्ताता तस्य (मन्धुं स्तात्रं) S.; Here the word मध्यानः is used by its side; 64-3-see above अरिः; 68-2--औरः अस्माद्विराधिनः-- S.; 83-5--औरः श्वीः-- S.; 86-7--स्वामी S.; 92-4--औरः-- S.; 100-5---स्वामी स्तुतीनां हाविषां या S.

Thus, we see that the form set: is some times taken to be nomesing, of set, some times nome plut or accuplut of set, but very frequently, the genit sing, of set. And the opposite meanings of 'a pious man and one who is not pious', 'a lord or friend' and 'an onemy' are attributed to the same word, which, no doubt, is a curious phenomenon, and involves great improbability.

As for the word off, all are at one in attributing to it both a good and a bad meaning, though it is improbable that one and the same word should mean both a friend (e. g. Ludwig I. 150-1; V. 33-6 and 9.) and an enemy (e. g. Ludwig. VIII. 34-10; IX. 79-3) or the pious man and his oppsite (e. g. I. 9-10; and I. 184-1; I. 185-9). Roth thinks that there are really two words; one from stand the other staffrom tr. Grassmann thinks

This note is abbreviated from 'Vedianke Studien' by Geldner and Pischel, Vol. III. p. 72 and ff.

of only one word, that from आर्: while Bergaigne thinks of only अ-दि from स to give or र wealth and आर=a greedy man, an enemy or a poor man, thus a priest. He further says that अर्थ: comes mostly from आर and not so from आर. Oldenberg advocates the same view; though Geldner thinks that the and meaning i. e. अ-रि is wrong.

The right meaning of the word is taught by Yaskain Nir. V. 7., where he says that अरि means अनित्र and कियर.

। अरि= rich, the rich man, the patron, ruler. In VIII. 2-14 and 13, Rg. the context distinctly shows that रेक्त=मध्वन=अरि.

So also in I. 150-1 and 2. Rg. we have a contrast between the really rich man and the falsely rich man and there अरि=धनिन.

So in AV. 20, 127, 11, it is said of the glerifier of Indra, 'सर्व हत्ते पूजाब आरि!'='every rich man will spend for thee with full hands'. And this would indeed prove more attractive to the singer than the false hope of the nobility of the greedy, as Oldenberg translates 'even the greedy will fill thee'. So in I. 184-1 and I. 185-9 (भूरि चिद् अर्थ: ध्वास्तराय—to one who is more liberal than the rich) the meaning के कर only suits.

The uso of saft in the sing. prependerates, while the only instances where the plural can be said to be used without doubt are V. 33-2; VI. 20-1; VI. 25-7; VII. 48-3; VII, 92-4; X. 89-3.

The word अरि as used in connection with the war horse विधानम् and the horse of Pedu, means the same

man' and not by a poor man. Or अर्थ: in these cases may be the Abl. rather than the Goni. and the expressions mean 'who is more praised' than a rich man'. For such a use of the Abl. giving the adj. the sense of the compar. cf: 'अरिशं वां दिवः प्रश्नु' I. 46-8. So also in R. V. VIII. 19-36, we have महिला अर्थ: सापति:—' the noble lord, who is more liberal than every rich man.'

If we compare the various passages containing the phrase अव आ, we find that the word विश्व generally precedes it; by placing these passages side by side with others in which विश्व and अरि come together we shall see that अरि means ईश्वर, the rich man, while विश्व = the general class of men; the mass.

IX. 61-11—एना विश्वानि अर्थ आ धुन्तानि मानुषाणां बनामहे-'the honors of men, down to the rich; oven of the rich man,'

X. 191-1-- विश्वास्यर्थ आ.

VI. 45-33; VIII. 94-3. In all the passages आ= अभिविधि and the idea is 'all even including the rich'.

X. 28-1—विश्वो हि अन्यो अरि: आजगाम—'every other man even the rich, has come'.

VIII. 1-22—विश्वयूनों अविष्ठन, ' glorified by all, praised even by the rich man'.

I. 61-9--विश्वसूर्तः स्वरिः 'praised by all, ho to whom even the rich man is woll-disposed (शोभनः अरिः यस्मे)'. अरि and स्रि are on a level and refor to the same persons, instead of meaning opposite persons. (e.g. poor and rich). Thus in VI. 25-7 असमाकानो ...अर्थः सूर्यः = rich patrons;

cf. अस्माकासश्व सूरयः I. 97-3; and V. 10-6, also अस्माकासोः मधनानः VII. 78-5 and VII. 92-4.

X. 20-4-अर्थो विशां गातुः एति-Hero an antithesis between the rich man and the ordinary man is meant.

So also I. 4-6--उत नः सभगाँ अरिः वीचेयुः दस्मरुख्यः

III. 43-2--अति चर्गणीः आँ अर्यः---' come to us across the ordinary people, evon the rich'.

VIII. 34-10- आ पाहि अर्पः आ परि स्वाहा सोमस्य पीतये.

Also I. 9-10. In I. 126-5 wo have 'अरिधायसः गाः'— 'cows which satisfy or nourish even the rich.'

So also cf. VII. 100-5, where अप:='of a rich man'. After having fixed the general meaning fixet for आft, we now come to other more particular meanings of the word, following from the general one.

2. अरि=मधवन्-tho patron, tho rich यजमान.

VII. 92-4.; X. 39-5. (Say. आर = गन्ता, पति:, यजमानः); VII. 64-3. 'जयथा न आद् अरिः स्वासे'—' So that the patron can rocommend us to another generous donor, or to king Sudas.'

VII. 34-9—' उपमें केतुं अर्थः ' 'the standard, the type of a patron'

So अर्थ: गिर:=tho song of the patron, i. e. the song ordered by the यजमान and recited for him by the priest. thus I. 122-14; X. 148-3.

3. अरि≕मधवन् इन्द्र. cf. V. 33-6.

As grood and niggardliness are also associated with the rich man who does not give away riches or utilise them in performing sacrifices and rewarding priests, soft then came to have the bad meaning, though this can not be established etymologically. By the side of such expressions as रेवता पणिना IV. 25-7, रेवान् अदास्रतिः VIII. 45-15, we have also अयों अदाद्युष: IX. 23-3. Notice the word कदर्य-which lit. means 'a bad master'-meaning 'a niggardly person'. So also in classical Sk. literature riches are often denounced, which easily accounts for the change of meaning of the word अरि from 'a rich man', to 'a greedy man'. Thus in II. 12-4 and 5 अरि is used in this sense; cf. I. 81-9; where is asked to confiscate the wealth of the MR. The same idea is met with in IX, 23-3; V, 2-12; I, 33-3; VIII, 21-6, In all these passages, the आरि is spoken of with so much contempt that अरि comes to mean 'an enemy'. The idea that a rich man is hated on account of his riches and that riches makes men enemies of each other, is very frequently met with in classical Sanskrit literature. Thus अR first means 'the rich rival', or 'tho patron of the opposite party', and then the hostile patron and the enemy, the rival. He who thinks this change of meaning too forced and artificial, should remember the word भातृत्व which means 'a nephew' and 'a rival' too.

Thus the word we means 'a rich man', 'a greedy person' 'a rival,' 'an enemy'. It is difficult to determine which particular meaning the word has, as the meanings themselves are difficult to be distinguished in a cut and dry manner. When the description refers to a battle, or when even a sacrificial meeting is represented as a battle, then the bad meaning is applicable.

Thus in VII. 48-3—विश्वान अर्थ: = all the rich rivals, and अर्थ: शजो: = of the rich enemy; cf. VIII. 65-9—विश्वान अर्थ: विपश्चित: अति क्याः "Leave unheeded all the singers of the rich rival."

Cf. II. 23-5-- अति यहर्यो अहीं दू ... दिवणम्--'the wealth, that is more worthy than that of the rival'.

VII. 68-2—तिरो अयों हबनानि श्चर्त न: — 'Unheeding' the invokations of the rival, listen to ours.' Also cf IV. 29-1; VIII. 33-14; VIII. 66-12; VIII. 65-9.

Also VII. 31-5---'मा नो निवे च वक्तवे अर्थे। रम्धीः अराज्ये' · · ·

of VIII. 48-8. Also अर्थो अरातय:---tho bad will of the rival or the

onemy; VI. 48-16; VII. 83-5; etc.

As for the word अर्थ, Naigh II. 22 gives अर्थ as one of the synonyms of क्षेत्र्यर. Pan. III. 1-103 has अर्थ: स्वाभिषयपो:'. In Veda it is used to mean 'master', 'ruler'. cf VIII. 1-34; VIII. 51-9; IV. 16-17; X. 34-13; VII. 65-2; II. 35-2; IV. 1-7; V. 16-3; VII. 8-1. On VI. 47-9, Say. has 'अर्था प्रस्थ स्थामी अन्य: किया'. So also V. 33-9.

Even in those passages, where अयं and बास are mentioned side by side, अर्थ need not mean an Aryan, but only a master, lord—e. g. in VII. 86-7 अर्थपानी and बासपानी are used of waters—meaning respectively 'owned by Indra' and 'owned by robbers.' Also VII. 6-5; and X. 43-8.

In classical Sk. अरि means only 'enemy', अर्थ is obsolete and आर्थ means 'the Aryan.'

LECTURB VII.

THE DIFFERENT VIEWS HELD REGARDING THE CONTENTS OF THE RIGVEDA.

The orthodox view—the Vodas are inspired and infallible—The idea that the Samhités and Bréhmanas are inferior to the Upanishads—passages referring to the making or composing of hymns—a superhuman character ascribed to the Rishis—How to reconcile the contradictory ideas—The view that Vodas are a babbling of primitive people—The view that Rigveda is not only a poom but a history—Religious, philosophical and secular hymns—the wedding hymn X. 85.—The funeral hymn X. 18.—Historical hymne—Dána—Stutis—A humorous hymn—Didactic-gnomic hymns—formulas of incautation—poetical riddles.

Now we proceed to consider and discuss the different views held regarding the contents of the Rigveda. The orthodox view is that the Rigveda (or Veda in general) is the eternal storehouse of highest knowledge, that it is inspired or is of divine origin, that it is not a human composition and that it is endowed with supernatural efficacy. Inspiration and infallibility are the two chief attributes of the Veda. Here it would be interesting to know what opinions post-Vedic works held in this matter, and whether they are confirmed by an examination of the contents of the Rigveda itself. To begin with, I may quote the following passage from the Satapatha Brahmana X.

4-2-21-23 in translation. "Then he looked around upon all boings. He beheld all beings in this triplo Vodic Science. For, in it is the soul of all metros, of all hymns of praise, of all breaths, of all the gods. This, indeed, exists. It is an undying thing. For that which is undying (really) oxists. This is that which is mortal. Prajapati reflected, 'All boings are comprohended in the triple Vedic Science: come, let mo dispose myself in the shape of the triple Vedic scienco'...You know the woll-known verso in the yourge which is generally rogarded later in character than the oldor parts of Rigvoda or Rigvoda proper, "तस्माबज्ञात्सर्वहृत: क्ताः सामानि जित्तरे। छन्दांस जित्तरे तस्मात् यज्ञस्तस्मादजायत ॥." From the अथवंदेद and from the प्राणंड a large number of passages may be quoted bearing on this subject, which all agree in preaching that the Voda had a divine or mystic origin. All this while, however, there was another idea running through all sorts of works, viz., the inferiority of the Samhita proper in comparison with the Upanishads or अध्यात्मशास्त्र. That the Veda deals with only कर्म whose fruit howseover glorious and pleasing at first is after all porishable; while ज्ञान or knowledge alone is the efficient means of highest bliss, is an idea met with everywhere. The Vedic hymns, though a divine origin is, no doubt, allowed to them are at all ovonts dopreciated, as parts of the inferior scionee, in contrast to the Brahma Vidyá or knowledge of Brahma, the highest of all knowledge. In this connection I may adduce the well-known passage from tho छान्दोग्य उपनिषद् VII. 1. 1-"अभीहि भगवः इति ह उपससाद सनत्क्रमारं नारदः तं ... होवाच यद्देत्थ तेन मीपसीद । ततस्त

ऊर्ध्व वक्षामीति स होवाच ॥ १ ॥ ऋग्वेदं भगवीऽध्यामि यजुर्वेदं सामवेद-माध्येणं चतुर्थमितिहासपुराणं पञ्चमं वेदानां वेदं पित्र्यं साहिं। देवं निाधं याकोवाक्यमेकायनं देववियां ब्रह्मविद्यां भूतविद्यां क्षत्रविद्यां नक्षत्रविद्यां सर्पदेवजनविद्यामेतद्भगवी८ध्यामि ॥ २ ॥ सीऽहं भगवी मन्त्रविदेवासिम ना-त्मविच्छतं होव मे भगवदृहशेभ्यस्तरित शोकमात्मविदिति सोऽहं भगव-को चामि तं मा भगवाञ्छोकस्य पारं तारयत्विति तं होवाच यहै किंचेतद-ध्यगीष्टा नामैवेतत् ॥ ३ ॥ नाम या ऋग्वेदो यजुर्वेदः सामवेद आधर्वणश्च-तथं इतिहासपुराणः पञ्चमी वेदानां वेदाः ॥ ४॥ स यो नाम ब्रह्मेत्यपास्ते यावज्ञाम्नी गतं तत्रास्य यथाकामचारी भवति यो नाम ब्रह्मेत्यु-पास्तेऽस्ति भगवा नाम्नी भूयहति नाम्नां वाव भूयोऽस्तीति-तन्मे भगव. In this passage, all the Vedic Samhitás and other branches of knowledge are spoken of as being merely a name, mere pedantry, not able to free you from misery. But the knowledge of the soul by which alono you can get beyond misery is something over and above all this learning. The same thought prevails in the Bhagavadgitá II. 42 and ff. "यामिमां प्राचितां वाचं प्रवदन्त्यविपाश्वतः।वेदवादरताः पार्ध नान्यदस्तीति वादिनः॥ ४२॥ कामात्मानः स्वर्गपरा जनमकर्मफलप्रदायः । क्रियाविशेषबहुलां त्रैराण्यविषया वेदा निस्त्रैराण्यो भवार्ज्जन । याषानर्थ उदपाने सर्वतः संप्लुतो-दके। ताबान्सर्वेषु वेदेषु ब्राह्मणस्य विजानतः॥." Here, the Vedas are condemned as being flowery speech dealing with actions and their rewards, of no value to the possessor of the knowledge of Brahma. That the Veda deals with something supernatural which cannot be made known by ordinary perception and inference is the idea running through the following extract from the Vedárthaprakasa of Mádhaváchárya on the Taittiriya Yajurveda (p.1 ff. in the Bibliotheca Indica). 'इष्ट्रपादयनिष्टपरि-हारयोरस्रोकिकसुपार्य यो ग्रन्थी वेदयति स वेदः । अस्रोकिकपदेन प्रत्यक्षातु-आने स्वानर्खने ।

In जैमिनीयन्यायमालाविस्तर (1. 1. 25 and 26), the idea that the Veda had any personal author is contradicted.

ं पौरुषंयं न वा वेदवाक्यं स्यात्पांक्षयता । काठकादिसमाख्यानाहाक्य-त्वाच्चान्यवाक्यवद् ॥ समाख्याध्यापकृत्वंन वाक्यत्वं तु पराहतम् । तत्कर्वनु-पलम्भेन स्यात्ततोऽपौरुषेयता ॥ '

The same view will be found to have been held by all post-Vedic works, that the Vedas are not the work of a personal author, that their authority is selfevident, that therefore they are eternal and self-evidont. Here I may explain the moaning of अपीरंपयत्व which is so frequently assorted about the Vedas. The नैयायिकs, while admitting the unquestionable authority of the Vedas and basing their ideas of the self theroupon, at the same time assert that they are the works of \$200, the Highest Self, who is all-pervading, omni-scient and free from desire, happiness etc. They argue that just as the works of ordinary type are written by human authors c.g. Raghuvamsa by Kálidása and so on, so also the Vedas, being as much compositions as Raghuvanish must have some author and that is none but \$200 who is far superior to ordinary souls. Honco the authoritativeness of the Vedas. Against this the Vedantins argue that the वेदं are not बैक्विय but they are अपौरुषेय and this अपौरुषेयत्व is technically explained by them thus .-

'निह तायरपुरुषेणोच्चार्यमाणत्वं पौरुषेयत्वं, ग्रहमतेऽपि अध्यापकपरंपर-या पौरुषेयत्वापनेः। नापि पुरुषाधीनोत्पत्तिकत्वं पौरुषेयत्वं.......... किंतु सजातीयोच्चारणानपेक्षोच्चारणविषयत्वम् । तथा च सर्गायकाले परमेश्वरः पूर्वसर्गसिद्धवेदानुपूर्वीसमानानुपूर्वीकं वेदं विरिचतवास् त तु तिक्षजातीयं वेदमिति न सजातीयोच्चारणानपंक्षांच्चारणविषयत्वं पौरुषेयत्वं वेदानाम्।

Thus the अपास्थियत्व consists in the fact that the Vedas in this creation are exactly like those in the previous creation and so on without beginning.

If, however, we turn to the Rigvoda itself and examine its contents with a view to determine the question before us, what do we find? We find a very large number of passages where we have a distinct reference to the facts—that (1) the hymns were composed or made by the sages or Ris with whom they are associated (2) that there are old and new Rishis and hymns spoken of separately.

Thus we have VII. 35. 14-' इदं ब्रह्म कियमाणं नवीयः ', VII. 37. 4 ' ब्रह्म रूण्वन्तो हरियो वसिष्ठाः, 'VII. 97. 9 ' ब्रह्मेन्द्राय वक्षिणे अफारि', and so on.

In the following passages, the word nex to fashion or fabricate is applied to the composition of hymns:---

Thus--VII. 7. 6. 'मर्ज ये वारं नयी अतक्षन,' So also II. 19. 8, II. 35. 2 and so on.

So also we may compare—VII. 15. 4—'नवं तु स्तोभ-मग्नयंजीजनम्'; VII. 22. 9—'हंद्र ब्रह्माणि जनयंत विजाः'; VII. 26. 1—'तस्मा उपयं जनयं यज्ज्ञजोषत्'; VII. 31. 11— 'हंद्राय ब्रह्म जनयंत विजाः'; VII. 94. 1—'ह्यं.....पूर्व्यस्तुतिः अभाददक्षिरिवाजनि'.

It is, of course, very possible that in some cases this making or fashioning or generating of hymns may mean nothing more than uttoring or reciting the prayors on the occasion. The passages in which ancient and modern Rishis, and old and new hymns are spoken of, have been given above in Lecture 3.

[§]वेद्यान्तपरिभाषा—end of आगमपरिच्छेदः

By the sido of these, there are, however, other passages in which a certain superhuman character scens to be ascribed to some of the Rishis, and divine inspiration is supposed to have given rise to hynnis, to which also a mysterious or magical power is ascribed. I may here refer to one such passage in connection with the Rishi Vasishtha, the author of the 7th Mandala—

VII. 33. 7 to 13 verses-- त्रयः क्रुण्वान्ति भुवनस्य रेतः etc.

In VII. 87-4 and VII. 88-4 there are references to knowledge supernaturally communicated or favours divinely conferred on Vasishtha. The same is said of Visvámitra, the author of Mandala III., in III. 29-15; III. 43-5; and III. 53-9. TI is personified and highly eulogised, e. g. in X. 125, and the divine speech is described as having entered into the Rishis. c.g. X. 71-3—

' यज्ञन याचाः पदवीयमायन् तामन्वविदन् ऋषिषु प्रविष्टाम् ।'

In the following passages, a miraculous power is attributed to the prayers of the Rishis—

III. 53.12-विश्वामित्रस्य रक्षाति बहा इदं भारतं जनस् ।

VII. 33.3-'एयं सु कं दाशराज्ञं सदासम् प्रावद् इन्द्रो बहाणा वा व-

VII. 33.5- वसिष्ठस्य म्नुषतः इन्द्रः अश्रोत् वर्षं ह्रस्तुभ्य अरुणोतुः स्रोकस्।

At the same time, we have passages in which the Rishis distinctly speak of their own consciousness of ignorance and inability to fathem the profound depths of the universe and knowledge, as against the ominiscience ascribed to them by later writers. e. g. Rigvoda 1. 164-5, 6 and 37.

How to reconcile all these various ideas present in the Rigveda? It is quite clear that some of the Ancient Rishis entertained a belief, though, no doubt, indistinct and hesitating, in their own inspiration. This belief was not then suffered to die out in the minds of later generations. On the contrary this belief grew up by degrees into a fixed persuasion that all the literary productions of these early sages had not only resulted from a supernatural impulse but were infallible, divine and even eternal.

I had above referred to the idea that the Samhitás of the Veda though regarded as revelation, were, however, regarded as inferior or lower in character, as compared with the security in the Upanishads. This view was furthered by the Minansakas and in Sáyana's commentary we see that the ritualistic purpose is prominently held before our view in the interpretation of the text.

Now coming to the views held by the moderns in this matter, I have first to refer to the view that the Rigveda is merely a collection of poems, which suggested themselves to the Rishis on the spur of the moment. The Primitive Aryans were children easily susceptible to the influence of their surroundings, highly imaginative, simple and innocent. Just as children conspicuously show a tendency to make god of everything that they see, or by virtue of their fresh and creative imagination not checked by commonsense or practical consideration, are highly optimistic and can turn the clouds into elephants and camels, in the same way the Aryans of the Rigveda, highly struck with admiration and wender at the sight of the various phenomena of nature, burst forth into praises of an

inspired character, showing a child-like familiarity with the gods created or rather discovered by them, full of hope and cheerfulness, the special characteristic of childhood, knowing no fear of wordly evils and misfortunes.

This viow has been now mostly set aside or substantially modified, as the hymns of the Rigveda have come to be studied more closely and critically. That the Aryans of the Rigveda were not absolutely primitive, but that they were in a sufficiently advanced stage of civilization is a fact most clearly proved by the contents of the hymns themselves. Besides the form of metres, their variety and artisticness, all these go to prove the same fact.

Another view was recently advocated by an Indian gentleman that Rigveda is not only a poem, but a history referring to the social life of the time and the mutual wars and other incidents. The incident of the Panis stealing the cows and Sarama tracing them for the Angirasus is interpreted as referring to the actual hostility between the Phoenicians and the Angirasus, of whom the present Brahmins are descendants. Thus, according to this view, the term if is equivalent to the Phoenicians, the term if to eaws, and that to some Phoenician woman enslaved by the Angirasus, the Aryas including both siftens and units.

Thus the following facts have been doduced from the hymns.—

A great war broke out, in the romoto old days between the Indian Aryans and the Phœnicians, in which the latter were defeated and compelled to leave

a poem only, but a history. The Phonicians were the first of the civilised nations of the world. The civilization of Assyria (derived from Asura), of Babylonia, Egypt, Greece and other ancient countries owed its origin to the union of the civilization of the Aryans with that of the Phonicians. These Phonicians originally lived in Afghanistan or in some parts of India, whence driven out, they migrated westwards to Arabia, to Egypt, Greece, Rome and so on. In ancient time the Red Soa and the Mediterranean were connected together by a strait through which the Phonician and Aryan trading ships entered the Mediterranean. As that passage gradually silted up, the

connection between India and Europo broke off. The primitive civilization of the world was born long be

Coming to a more particular examination of the

foro the timo known to us.

this and many other wars. Thus the kigyeda is not

contonts of the Rigveda, we can divido the hymnes generally into three classes,—Religious hymns, Philosophical hymns, and Secular hymns. As remarke already, the religious hymns form a very large majority. What the prevailing religious thought and bolie is, we shall dwell on in another lecture. Suffice to say here that all those hymns which are difinitely addressed to divinities, containing a eulogy of thom an requests for granting of richos, progeny, and cattle and so on are included in the class religious. The philosophic hymns, very few in number, are those which re-

fer to such questions as who I am, whence I come, what is the prime cause of the universe and so on. These also will be dealt with elsewhere. Here I may deal at greater length with what I have called the Secular hymns. It is impossible to discriminate them sharply from the religious hymns, but here we mean by secular, those hymns, which are not specially directed to divinities.

Here we may best begin with those hymns which mark a transition, as it were, from the religious to the secular aspect of thought, those, for instance which refer to the wedding rite, or funeral rites, ceremonics which are partly religious and partly secular. In this eonnection the 85th Sûkta of the 10th Maudala is most desorving of study. The marriage of Soma and Sûryá is tho theme of this hymn, a pattern of married union in gonoral. "As Sun and Moon ever support each other and alternato in their office, on the constant fulfilment of which depend not only the prosperity of all inanimate nature, but also the possibility of intercourse between mon and the ordering of civil rolations, oven so man and wife must work together in harmony, and with united powers untiringly fulfil the duties lald upon thom in their vocation for the advancement of the family."* I recommend the hymn to you for study, as it throws most important light on the rite of marriage. The bridegroom with his right hand takes the right hand of the bride with this formula:--

Rigveda by Kaegi p. 75.

Gods, Aryaman, Bhaga, Savitar, Purandhi, have given thee to be my household's mistress."*

What an important part was played by the wife in the Aryan household, and how sacred and dignified the rite of marriage was regarded, can be bost judged from the admonitions and good wishes contained in the closing verses of the hymn, with which the newly married couple are greeted. I may quote here only one verse (X. 85. 46.) in translation.

"So rule and govern in thy home Over thy husband's parents both; His brother and his sister, too, Are subject likewise there to thee."

The next hymn to be noted in this connection is the funeral hymn—X. 18, which should be read wholly as it gives us a good idea of the most solemn rite prevalent amongst the Aryans.

Next we have to consider the so-called historical hymns. They are historical only in the sense that they refer to the victory and triumph of some princes of princely families, although fragmentary in character Although the really historical gain is not very rich and the statements are exceedingly deficient, still these fragments give us a glance into the active, war-

disturbed life of the Vedie times. The Kings seek to win the favour of god Indra and secure for themselve success against their enemy; but this they can do only by

^{*} Rlg. X. 85, 86

means of a prayer poured from their heart and fashioned after the model of the ancients, in henour of that God, for which they employ priests like Visvámitra and Vasishtha, who in their turn highly eulogise the liberality of the patron princes. In this connection, may be noticed the hymn; VII. 18. also VII 33. 1—7; VII. 83.

In this connection are to be neticed the so-called दानस्त्रातंs or praises of gifts. These are portions, not of the very highest poetical order, interpolated among or added to the original hymns, which while praising the generosity of the princes who bestewed presents on the Rishis, throw light on the names of tribes and kings and also on the families of singers and their genealogies. As an instance of such a दानस्त्रात o e verses 22-25 of VII. 18; also V. 30. 12-15.*

We may also notice a humorous hymn in which the peet banteringly likens the awakening of the fregs at the beginning of the rainy season, their merry creaking and their jellity to the sengs of priests intexicated with Soma. See VII. 103. Though Muir and Max Miller regard this hymn as a satire, still Haug and Bühler de not so regard it. They think that fregs and priests are mentioned together only because both have reference to rain. This is one of the three rain-bringing hymns, the others being VII. 101; and VII. 102.

There are also many instances of a didacticguenic kind in which proverbial thoughts and sontentious maxims are brought together in the form of

^{*} Instances may be multiplied. VI. 47.22, VIII. 1. 32 ff; VIII. 4. 20 ff.; VIII. 5. 87ff; X. 62. 8; I. 126. 1; VIII. 46.38 (women were given as slaves).

a verse; the ripe practicul experience is summed up briefly. Thus X. 117 is a collection of sayings, so also the Song of Wisdom X. 71.

About woman several things favourable and unfavourable are said in sententious а Thus VIII. 33. 17-' Woman's mind is hard to direct aright' etc. X. 95. 15-There can be no friendship with women, their hearts are those of hyenas'. On the other hand, we have a more favourable verdict in V 61. 6. 7-'And many a woman is often better than the man etc.' Also in X. 27. 12 the idea is that maidens are often wooed for the sake of rich possessions. VI 58. 5-even an ugly man becomes beautiful only if he has cows or riches, IV 74. 9 and many more.

Formulas of incantation and exorcism are also to be found in the Rigveda, though their proper department is really the Atharva veda. The healing of a sick person is accomplished in X. 60.12; Indra heals a woman afflicted by skin disease VIII.80; in X. 161. 2. and 5. one who is near to death is recalled to life. A had omen is averted in X. 164. 5; in X. 145 a girl seeks to drive off a successful rival and to bind the man to her. A maiden awaiting her lover seeks to put the whole household to sleep in VII. 55. 5—8.

Before concluding, I have to refer to the so-called poetical riddles or actives in which things are described not by their direct names but by round about and enigmatical expressions, by symbolical and mystical references, numbers playing an important part. Hymn VIII 29 is a good instance, simplest of its kind. Thus

in verses 4, 5, 7, 8, of this hymn, the gods Indra, Rudra, Vishnu and Aswins are spoken of, without their names being mentioned, but they can be guessed from the very short descriptions typical of them. Much more intricate and difficult are the symbolic descriptions of Hoaven and Earth, Sun and Moon, the atmosphere, the cloud, rain, the Sun's rays, the year, seasons, months etc. for which I recommend the hymn I. 164 which is a mixtum compositum of such riddles or trying questions, reminding us of what are in Marathi called satures.

LECTURE VIII.

RELIGION AND MYTHOLOGY OF RIGVEDA.

No fixed religion, but a procession of ideas—not primitive but civilized—the practical and utilitarian character—a hieratic religion—a religion of the upper classes—enjeyment of the present life—simplicity and sincerity—transparency of conceptions—arrested personification—comparisen with Greek Mythology—Henetheism—the threefold division—A difference in the cenceptions of Gods in the Rigyeda and in the Purapas—Agni—His three forms—His birth—the messenger—important attributes—the myth of Agni concealing himself—Indra—opaque and Indo-European—fendness of Soma—God of physical power—the national here of the Aryans—His expleit over Vritra—the storm theory—the dawn theory—the spring theory.

A very large number of the hymns of the Rigveda is religious in character as opposed to secular; and hence you would be anxious to know what religion these hymns contain. But let me tell you at the very threshold of the subject that it is a very hard task, nay, almost an impossible task to answer exactly the point in question. Because in the first place, most of these hymns are mere prayers generally connected with some sacrifice or other, and in the second place, there is no attempt at system, the collection being nothing but individual prayers addressed on very various occasions, by several Rishis who were perhaps separated

from each other by long intervals. Thus, we have in the Rigveda a procession of thoughts, not a fixed, stereo-typed result. Wo see here how the ideas were formed and how they progrossed; we have not got one systematic whole, in which overything is complete and finished. Thus what I attempt to do in this lecture, is merely to indicate to you what ideas provailed in the ago of the Rigveda, as indicated by the hymns which we are studying. Certain tendencies and characteristic thoughts can be marked out as peculiar to the times, as the result of our study, and those I wish to point out succinetly to-day.

According to one view which was very strongly advocated during the early stages of the Vedic study, the Vedic religion is very primitive, the Vedic people being almost semi-barbarians. They were mere children dazed and surprised by the different natural phenomena, and stupefied with wonder and admiration. As a German nursery rhyme asks—"tell me how white milk can come from the red cow" so the Vedic Rishi is struck with wonder that in the raw cows, black of hue or ruddy, is stored the ripe milk glossy white in colour; and this miracle is praised again and again as an evidence of divine power.*

But a careful study of the hymns would show that this viow is not tonable. That the Vedic people had a civilization of their own, that the hymns mark a certain advanced stage in artistic and metrical correctness; that the hymns are meant to serve a definite purpose e. g. of sacrifice, these are facts which every

[•] See Rigvoda 1, 62, 9; I, 180, 3; II, 40.2; and so on,

student of Rigveda will easily see for himself. That the sense of art was present to their mind clearly follows from such passages as these—I. 109.1; I. 62. 13; II. 19.8; VII. 7. 6; I. 171. 2; VII. 64. 4—in all of which the hymn or song is described as "well hown," "well fashioned as a war chariet from the hands of a skilled artisan." cf; also X. 119. 5 'अई तप्र वन्ध्रं पर्यचामि ह्वा मतिष्.

A striking feature of the Vedic religion is its practical and utilitarian nature. The hymns though highly poetic and inspired in character are all at the same time incidental to the sacrifice. They are recited or sung by the priests or bards on occasions of sacrifice whether as mystic spells to accompany and sanctify the offerings or as rhapsodies to olevate and choor up those The Rishis offer prayers and oblations of Soma or Ghoe, expecting in return rowards from the Gods, such as long life, prospority, cattle, warlike sons and so on. 'Give and take'is the simple law which is applicable to the dealings between men and Gods even. Reciprocity, frank, unconditional reciprocity becomes an accepted motive'. * cf.: the following instances from the 7th Mandala. 1. 5; 1. 23; 1. 24; 8. 6; 15. 4; 15. 9; 16. 9, 10; 82. 7; etc.

Another trait of the Vodic roligion which naturally follows from the above, is that it is essentially a religion of priests, a hieratic religion. The priests occupy a very important position, in the ritual, they serve as mediators between princes and Gods. Not only sacrifices but such important matters as the issues

Bloomfield-Religion of the Veda, p. 184.

of a combat between rival princes or clans solely or at least mainly depend on the prayers of the priests if they take the heart of the Gods. The priests propitiate the Gods with prayers and offerings and the Gods thus pursuaded, actually take part, as it were, in the combat and make their favoured party victorious, rooting out and crushing the hostile army. In this connection I may recommend hymn 18 of M. 7. Also see hymn 83 of M. VII. where the Vasishthas invoke the assistance of Indra and Varuna in favour of their patron Sudûs. The enemics have circumscribed me, hear our call and come to us with succour' (VII. 83. 3). Then in verse 4 of the same hymn it is said 'you heard the prayers of those in the cries of war; effectual was the service of the Tritsus' priest.'

In this connection we are met with a curious idea and it is this, that both the parties in a combat call upon the God for assistance, but the God goes to one party whom he wants to favour; and the other party meets with a crushing dofeat. "The men of both tho hosts invoked you in the fight, Indra and Varuna, that they might win the wealth, what time ye helped Sudas with all the Tritsu folk, when the ten kings had pressed him down in thoir attack." (Verso 6). samo idea is soon with regard to sacrificos, where also the priest always prays to the God thus-"Come to our prayors, oh Indra, thou who knowest; let thy steeds be yoked and guided hither; men of all kinds, indeed, invoko thee; still give thy ear to our prayers only, ele all-impeller." (VII. 28. 1). Thus the question arises; Were the Gods not able to be present at all sacrifices. simultaneously?—I think the following verse answe the question—'With Soma, they brought Indra from distance, over Vaisanta, from the strong libation Indra preferred Vasishthas to the Soma pressed be Pasadyumna, Váyata.' (VII. 33.2).

What is meant by all this is that a righteous, sincere prayer and a rich offering pursuaded the Gods tattend and bring success with them. The spiritual conception that he who has faith and God on his sid has also success or victory with him, seems to be present hore, and we need not bother ourselves with such questions as whether the Vedic Gods had personal forms or not and if they had them, how they could be present at all the sacrifices simultaneously—questions which occupied later theologians and even the author of Nirukta.

Thus, we see that the patrons or princes for whom the priests conducted the sacrifices found themselves between two exacting agencies. On the one hand, there were the Gods to whom they were to make rich offerings, on the other hand, there were the priests to whom they were to give fees and gifts. The crackers or praises of the liberal gifts conferred by certain rich patrons on priests distinctly point to this fact.

Another trait which strikes us is that the Vedic religion is a religion of the upper classes who are well-to-do. The religion of the Rigveda presupposes an established household of considerable extent; a wealthy and liberal householder, elaborate and expensive materials, and many priests, not at all shame-faced

about their fces."* It is to be distinguished from the pepular religion, the religion of the peer, with its humblo rites and its childish reliance upon sorcery and the medicine man, which is the religion of the Atharva-Veda and the Grihyasûtras.

The great ebject which the wershippers er house. holders would secure, is not immortality or heavens, but a leng life for full hundred yoars, prosperity, warlike offspring, in short, all pleasures of this earth. Conquest of enemies, freedom from diseases, plenty of foed and drink seem to be the happiest ideal which the Vedic Rishis placed before themselves. "Agni, bestow upon our chiefs and nobles that famous power, that wealth which feedoth many;" says Vasishtha. (VII. 5, 9.). "With precious things, oh Indra, thus content us; may we attain to thy exalted favour. Send our chiofs plenteous food with hero children. Preserve us evermore, ye Gods with blossings" (VII. 24.6). "A hundred autumns may we see that bright eye, beneficent to Gods, arise; a hundred autumns may we live." (VII. 67, 16). Thus we see that the Vedic Rishis enjoyed the life before them heartily, without shewing any tracos of disgust with the same. This life is uncertain, and perishablo, this life is a dream and the worldly existence is unsubstantial. Death is nature, life is enly an accident,-these and such ether melanchely ideas are conspicuous by thoir absence. A spirit of healthy joy in the life we live, seems to pervade the Rigveda. It is only in very rare instances that immortality or dwelling with Geds in heavon is referred

Bloomfield-The religion of the Veds, p. 77.

to. Thus in VII. 57. 6, we have "वदात नी अमृतस्य प्रजावे." Give us of Amrita for the sake of the offspring.' But even here we are not certain of what the word Amrita means. Roth explains the line to mean 'Add us to the number of the people of etornity, i. e. to the blessed." But Sáyana takes the word to mean nothing more than 'water;' while Grassmann takes it to mean 'long life' only. So also in VII. 76. 4, we have "They were the God's companions at the banquet, the ancient sages true to law eternal. The fathers found the light that lay in darkness, and with effectual words bogot the Thus here the ancestors of the Rishis are spoken of, as being associated with the Gods as companions and friends: cf., also I, 154. 5. The last verse of VII. 59 also contains a prayer so may I bo released from doath, not reft of immortality'. But the character of the verse is highly suspicious and the verse also occurs in Vajasaneyi Samhitâ 6. 30. Thus in the Rigveda, there are no indications, whatsoever of the later doctrine of Nivritti or Renunciation. The Vedic Religion is all optimistic.

Rigveda are all praises or prayers relating to sacrifices, still they are not liturgical nor sacrificial, in the sense in which Mantras of the Yajurveda are. Simplicity and sincority are the dominating characteristics. Heart speaks to heart. The cold formalism and artificial elaborateness are missing.

The hymns of the Rigveda are all praises and prayers addressed to gods which are personifications of the powers of nature, a fact which has greatly con-

tributed to give a poetic colouring to them. The early dawn, the bright rising sun, continue to fill the Vedic Rishi with roverence and a sonse of wonder, even after hundreds of yoars, since these natural forces wore turned into gods. The singular interest and importance of the Vedic poetry and the vedic religion lies in this fact that these priest-poets, in their heart of hearts, are not mere technicians, but tense observers of the great facts and acts of nature, and worshippers of the powers whom they fancy at work in nature; and that in spite of the plenty of time which was more than enough to have stiffened all nature-worship into mere admiration, fear and adulation of porsonal gods, they had not generally become forgetful of the forces in nature from which sprang the gods, whether It be due to the vast impressiveness of India's nature, or to the highly poetic and sincore temperament of the Vedic Rishis, or to both. "Its florcely glowing sun, its torriblo yet life-giving monsoons, the snew-mountain giants of the north and its bewilderingly profuso vegetation could hardly fail to keep obtruding themselves as a revelation of the powers of the already existing gods." Though the Vedic Rishis had made a great deal of advance in their spiritual conceptions and can not be regarded as more beginners and primitive barbarians, still, all through this advancement, we can not lose sight of the first touch of nature. their conception of Savitri, Indra and Varuna and of other gods, though the personification has advanced, no doubt, to an extent, sometimes quite sufficient to

^{*} Bloomfield's Religion of the Vedas. p. 82.

make distinct personal gods of them, still we can se through these gods and can have an insight into the original from which they sprang. It is this trans parency of the Vedic pantheon, which is a most sur prising phenomenon. What may be called arreste personification is the very genius of the religion o the Rigveda.* Thus to take one instance, the go Savitri is described thus-through the dusky firma ment advancing, laying to rest the immortal and the mortal, borne in his golden chariot, Savitri cometh who looks on every creature. \$\dagger\$ So also the various myths connected with Indra, in the form in which they are found in the hymns of the Rigveda are quite transparent and their origin in natural phenomona can be clearly seen. Thus, as the Rishis of the Rigveda work their way slowly from the single and separate gods in the Rigveda to the later conception of the absolute one being or tho idoa of unity as finally settled in the Upanishads, they, all this while, with all their too human sordidness and all their natural fancifulness, seem to see the groat realities of the world with their eyes wide open, whether it be the single and separate manifestations of nature as in the Rigveda, or nature as a whole as in later books. Thus, the hymns of the Rigveda most clearly teach the fact that mythology, properly speaking, "is the first and fundamental adjustment of the individual human life to the outer active, interfering, dynamic world, which surrounds

Bloomfield, p. 85.

[‡] Rigveda I. 35. 2.

and influences man from the moment when he opens his eyes upon the wondors of its unexplained phenomona."

This arresting of porsonification in the Rigveda may be best realised by the student, by calling up another mythology, that of the Greeks. This is also based upon naturo, but naturo is soon forgotten, or if not ontirely forgotton, much obscured by after-born movements. The porsonification there is too finished. Thus, Zeus whose eye sees all and knows all, who is the beginning, the middle, on whom all is founded, is at the same time, the flippant, breezy Jove to whom the poets ascribo foibles and vices barely excusable in a modern born-vivant, and man about town. cide without end, parricido and murder of children, are the stock events of their mythology. Thus we have a complete humanisation in Greek mythology. As epposed to this, many geds of the Veda are scarcely more than half persons, their other half, being an active ferce of nature.

What has been said so far about the gods of the Rigveda is, of course, generally true. For, there are a few cases such as the personification of the doors of the sacrificial chamber, of the sacrificial post, of the chariet and so on. But these are only exceptions and do not belong to the Rigveda proper.

One more trait of the Vedic Religion I have to notice before I take leave of this part of the subject and proceed to the consideration of the gods in parti-

^{*}Bloomfield. p. 82.

cular. It is called Henotheism or Kathenotheism by several scholars. It consists in the tendency to raise the particular god to whom you are addressing prayers for the time being, to the most exalted and unsurpassed position, to whom all other gods are subordinate for the moment. This is done for most of the gods in turn. "The god in question, alone, is present to the mind of the singer; with him for the time being is associated everything that can be said of a divino being; he is the highest, the only god, before whom all others disappear, there being in this, however, no offence or depreciation of any other god."*Thus often times, it is not possible to distinguish one god from another owing to the similarity of attributes, though there can be marked out some attributes and functions which are distinctly characteristic of this or that god.

The gods are divided into three classes according to the regions or worlds they occupy. Yaska says-The Etymologists opine that there are only three deities Agni on the earth, Váyu or Indra in the Antariksha or mid-air and Súrya in heaven. One and the same deity is called by several names, owing to the wondrous or miraculous powers which it possosses or because of the different functions it has to perform, corresponding to which it receives the different names or (it may be held) that there are as many different deities as there are names, because there are as many different prayers.' Yaska further discusses the question regarding the form of these gods, (अथ आकारचिन्तमं देवतानाम्) in the course of which he states three different views viz.

^{*} Rigveda by Kaegi, p. 33.

the lator Puranas. It is, no doubt, a vory interesting subject to trace the character of every god from the times of the Rigveda down to the latest mythological works and to mark the differences which correspond to the different stages in the history of the Indian mind. Not only have the characters of the gods changed considerably even so far as to make them recognized with difficulty, but their mutual relations also have been altered immousely and he who was a very prominent and dominating god in the Veda has been reduced to a minor doity of little or no significance in the Puranas, and vice versa. Thus, Agni and Indra stand out most prominontly in the Rigveda, and thoir importance is not shared by any other god; but in the Puranas, if. they have not paled down into uttor insignificance, at least they have been reduced to a comparative subordination, by the side of the triad, that has put every other god in the background though, no doubt, Indra continuos to hold his position as a suzerain amongst the thirty three gods. The same is more strikingly true of Varuna, who in the Rigvoda is the god of justice, as it were, the lord in the moral domain, who watches the conduct of men and punishes them, but who, in the

all known to the Rigveda. On the other hand, Ushas and Parjanya, Bhaga and Aryaman, have ceased to exist as deities, not to mention the fact that Savitri, Pushan, Mitra, Surya who are so many different godheads with distinguishing characteristics have later on come to be mere synonyms, all signifying but one god.

ころののはないから、これではなるのであるとのなりのが、ころう

The god that stands out most prominently in the whole of the Vedic pantheon, is Agni, only second to Indra in point of the number of hymns addressed. Agni is a most striking instance of what I have above reforred to as arrested personification. It is both an element and a phenomenon and at the same time a person and a god. Though the word 'Agni' is Indo-European, in as much as Latin has 'ignis', Lithuanian has 'ugnis', old Slavie Ogni, still, God Agni, with all the diverse shapes it possesses, is, in every essential a product of the poet-priests of the Rigveda.

Agni is spoken of, under three forms, the Fire on earth, the Lightning in the atmosphere, and the Sun in the hoaven. Agni is generated from the satisfy or the sacred fire-sticks which are often described as the mothers; cf. VII. I. I. and VII. 3.9. It is also described as

aspects that are mainly dealt with. Agui dispels darkness, frightens away the demons of the night, and heralds light. 'या अपाचीने तमासे मदंतीः । प्राचीः चकार नृतम शचीभिः ॥ VII. 6. 4. Agni is ever young, because he is enkindled fresh every morning. He begins the sacrificial day. He is the oldest priest, is fed with gliee and rises flames. He issues from the trees into he consumes, thus he is the eater of his mothers. is bright-jawed (शाचिवन), with a head of light (तपुर्वाद्धा), with a face of glace प्तप्तीक, the lord of the people (विद्यते VII 15. 7), the lord of the house (यहपातिः), VII 19. 2. He is the immortal domestic priest, concentrat. ing in his own person all the sacrificial offices, (cf. VII-16. 5.). Not only is he the arch-priest, he is also the arch-sage (कवि: VII. 15. 2), कावकत and so on. Then the leap from an arch-priest and an arch-sage, to a Godhead is not difficult. He is the great God who is the messenger between gods and men. Ho hastens with his steeds and is ofton asked by the worshippers to bring the gods to the sacrifices or to convey the offer-

Bloomfield, Religion of the Veda. p. 159.

ings to them, 'प्रियं चेतिष्टं अर्शतं स्वध्यरं। विश्वस्य द्तमसृतस्॥ (VII. 16. 1).

Not only does Agni perform an important; function from the sacrificial point of view, he also drives the attgs in the jungles and brings great booty to the Aryans; cf. VII.6.3

Agni is connected with the अगिरस्छ, who are often described as the seven priests who brought down Agni from the heavens or first enkindled him for man. In this connection must be also noticed मातरिश्वम a semi-divine being who like the Greek Prometheus was the first to introduce Agni to men on the earth. This myth may be nothing more than the fire of lightning generated from the clouds, and striking trees and plants, whose germ Agni is often described to be, given out when they eaten fire.

Thus, we see that Agni is cosmic, ritualistic and divino, through all those stages, however, retaining its elemental or natural character, not allowing it to be obscured by rigid personification. There is one myth connected with Agni, which has been later developed into a neat story, by the Puranas. The function of carrying the oblations to gods was solely Agni's, so that it so happened that it became impossible for the gods, to subsist without him. Agni, however, got tired of his work of serving gods and mon and concealed himself into the waters. But the god Yama discovered and betrayed him and Varuna, as the spokesman of gods at last induced Agni to resume his task of expediting the sacrifices to the gods. For this I may refer the student to hymns 51 and 52 of the 10th

Mandala. This has boon turned into a very neat story in the Mahábhárata.*

The next important god is Indra, to whom the largest number of hymns in the Rigveda Samhitá is addressed, almost one-fourth of the total number of hymns. It is not possible to say exactly what phenomenon of nature is represented by this god, because so many personal attributes are ascribed to him that we can not easily pierce through the god's personality. Thus he is an opaque god, as compared with the transparent Agni. Indra's name, however, occurs in the Avesta, as Andra where he is degraded to a demon. But his chief vedic epithet Vritrahan is the same name as that of the abstract genius of Victory Verethraghna' in the Avesta, and the Armenian dragon-slayer Vahagn.'t

We may briefly sum up the attributes of the Vedic Indra as follows, from which it will be evident that the Vedic poet-priests exceeded themselves in lauding Indra, and that there was no high prowess whose credit could not be given to Indra.

Indra is born of the Heaven and the Earth (VII. 20. 5), and he drank Soma as soon as he was born (VII. 98. 3.); Indra is ancient, youthful, strong, agile, martial, undecaying, all-conquering, lord of unbounded wisdom and of irresistible power. He has a beautiful chin, he wears a beautiful helmet (शाका:), has golden arms (हरण्यबाह: VII. 34. 4), a golden chariot, with green steeds (हरियाका). His horses

^{6 (}See Vanaparva Adh. 224; Salya, Adh. 48, verses 16 to 22.)

¹ Bloomfield, Religion of the Veda. p. 176.

are yoked by the power of prayers; his weapon is the thunderbolt; no one can equal him in his fondness for drinking Soma. Exhibitanted by Soma, he slays the enemies and demons, (cf. VII. 22. 1, 2 and VII 29. 1). He, at a single draught drank tho contents of thirty pails that were filled with Soma juice (VIII. 77. 4).*

In the company of Vishnu, he encounters the hostilo demons variously called by the names of रूम, आहे. हाजा, नस्मि, इंचर, who shut up waters, and slayes them and liberates the waters (cf. VII. 99, 4 and 5.). He hreaks the cities of the Asuras (इरंदर:). Heaven and earth quake at the crash of his thundor. Indra is a terrible warrior, a gracious friend, a God whose shafts deal destruction to his enemies, while they bring deliverance and prosperity to his worshippers; VII. 27.3; 37. 3; 31-6. He is the most fatherly of fathers, has love and sympathy for mortals (VII. 23. 5). He controls the destinies of men, he is the enemy of the irreligious, a destroyer of the Dasyus and a protector of the Aryas.

Three principal traits stand out most prominently from amongst the highest divine functions and attributes ascribed to Indra. First, he is the god of physical power and dominion over the external world and he is not generally associated with the spiritual elevation and moral grandeur which is specially discernible in Varuna. In spite of his big personality, his essence and quality are that of lower, rather than higher religious conceptions. The coarse grain and the fleshli-

Off. Nirukta. V. 11 and the various interpretations of the fact given there. Read in this connection the hymn X. 119 which graphically describes the bragging of Indra under the influence of Some.

ness of his character arrest very unfavourable attention. Indra embodies so completely the human qualities of brag and blustor, glutteny, drunkeness and lust, as to make him the peg upon which to hang scepticism.'*

The second trait closely associated with this, is that Indra appears all through as the national here of the invading Aryans, in their struggles against the dark-complexioned Dasyus whem they had to evercome and drive before them. VII. 18 and 32 are good illustrations of this idea. Indra's godhood is invoked not only in connection with the extermination of the Dasyus, but even in the case of mutual wars amongst the different clans. He is called the Lord of Strength, with whom heroic deeds are associated.

The third point to be neticed is his exploit ever Vritra. The second verse of I. 32, runs thus:—'He slew the dragon who lay upon the mountain. God Tvashtar forged for him his heavenly club. Like rearing cattle, down came the waters, flowing swiftly to the sea'. The same fact is recorded in verses 6 and 7 of the same hymn. Now what is meant by this slaughter of Vritra by Indra? Who is Vritra? Who is Indra? what are these waters which were compassed by Vritra and which were afterwards liberated by Indra?

New several theories have been preposed to account for this. Even in Nirukta, the oldest available book on Vedic exegesis, more than one explanation are put forth. See, Nirukta II. 16 according to which, the credit of suggesting the sterm-theory must be

o Bloomfield, Religion of the Veda. p. 174.

this storm-theory, as is the malignant, evil spirit i. e. the cloud which has held fast the waters, towards the end of the summer and the advent of the rainy season and Indra is none but the god of rain, who piorces through the cloud and causes the waters to flow forth and shower themselves down on the carth. interpretation, the पर्वत or मिरि into which the waters were confined has to be understood to be a cloud. There are other places also in the Rigveda, where the word पर्वत is generally understood to be a cloud, e. q. I. 19. 7-- 'य इंह्रयन्ति पर्वतान् तिरः समुद्रमर्णवम्' where the अर्णव समुद्र is nothing but the अन्तरिक्ष, i. e. the middle world between प्रथियी on the one hand and यौ: on the other; and पर्वतान are the clouds. Sayana also takes here पर्वतान = मेघान. On this Max Müller notes that "in old Norse Klakkr means both cloud and rock; nay, the English word cloud itself has been identified with the Anglo-Saxon clud, rock." This storm-theory is followed by most of the Western scholars including Max Miller who is responsible for carrying this theory too far. But there are several objections to it.

Generally wherever this exploit over is mentioned, several other things are associated with it. Let us take the typical verse—II. 19. 3—where it is stated that Indra, the dragon-slayer, set in motion the flood of waters of the sea, generated the sun and found the cows. Now all these three phenomena can not be accounted for by the above theory. So the dawn theory is put forth. Indra is the sun exterminating nocturnal darkness and pouring floods of light for the world

of living beings. The rays of the sun may be the cows. This, however, only explains a part; and there appears to be a confusion between the notion of the restoration of the sun after the darkness of the thunderstorm, and the recovery of the sun from the darkness of the night at dawn* says Prof. Macdonell, which is nothing but admitting our inability to explain the myth satisfactorily.

Besidos thore may be raised several other objections against the storm and dawn-theory. Thus the fact that there is in the Voda another god पर्नन्य, the real storm and rain god, throws suspicion over Indra as the god of storm and rain. Bosidos in several placos it is distinctly stated that Indra caused the rivers to flow to the sea from the mountains which were cleft by him. Now, sufficient reasons have not been pointed out why पर्वत should mean 'a cloud' and rivers, 'the flow of rain.'

Thus a third theory is proposed by Prof. Hillebrandt. According to this theory, the waters are those of rivors and mountain-streams; their confiner is the frozen winter, when the rivers are at their lowest level,—conceived as a winter-monster by the name of wor the confiner, who holds captive the rivers on the heights of glacier-mountains; and thus Indra is no other than the spring or summer sun, who frees them from the clutches of the winter-dragon. This may be called, for convenience' sake, the vernal theory.

^{*} Macdonoli, 'Vedic Mythology' p. 61.

[†] Hillebrandt. 'Vldische Mythologie.' Vol. III.'p. 157.

[§] Bloomfiold — Religion — p. 179.

But this phonomenon would be worth the name, only in extremely northern countries, so as to be represented by the fierce and obstinate contest between Indra and Vritra, as is described in the Rigvoda.

But against all these theories there revolts one passago, II. 12. II--'यः शंबरं पर्वतेषु क्षियन्तं चत्वारिदयां शरशन्य-. विन्दत । क्षाजायमानं यो अहि जघान दातं शयानं स जनास इन्द्र: ॥ ' Here it is said that Indra found out the domon lying in the mountains, and the time of the commoncement of the contest is ovidently given in the words 'चलार्द-इया हारदि' which has boon so far translated by Vedic scholars as 'in the fortieth yoar'. That ज्ञार may mean 'a year' since the year began with the site season in Vedic times as is proved from several indications, we need not question. That the construction according to which चत्वारिक्यां is adj. lec. sing. of the ordinal qualifying शरि which is a word of the feminino gendor, is grammatically unobjectionable, goes without doubt. But no one has explained what is meant by the fortioth year or fortioth autumn. Doos it moan that the phenomenon represented by the Vritra myth, took place once in forty years? The suggostions that the passage may refer to a famine or drought that occurred after forty years or that it may represent a forty years' war between the Aryans protected by Indra and Sambara. the chief of the aboriginal races dwelling on the mountains, have to be dismissed as being too far-fetchod. and imaginary.

Hence a new interpretation is put on the myth by Mr. B. G. Tilak, based on his theory of the reminiscences of the Arctic Home of the Aryans, in the Rigveda.

According to this interpretation, the passage refers to the annual struggle between light and darkness, because in the polar or circum-polar regions, there is the long night of six months and the long day of six months, of course having a comparatively long twilight at both the ends. The waters are the cosmic waters which word supposed to surround the earth just like ether, in the world of light above and the world of darkness bolow; which eaused the sun, the moon and the stars to move with them. If these waters therefore ceased to flow, the consequences were very serious; for the sun, the moon, the stars, would then all cease to rise and the world would be plunged in darkness. we can fully understand the magnitude of the mischiof worked by Vritra by stopping the flow of The mountains into which these woro put up may be some metapherical mountains supposed to exist on the border of the nether world and this earth, just as, for instance, the sun is supposed to rise from the Meru-mountain. Thus the conflict with Vritra commenced in Sarad, the beginning of the long night, and ended at the end of the night or the year (cf. X. 62. 2. where the Angirasas, the assistants of Indra in his conquest of the cows, are said to have defeated Vala, at the end of the year परिवत्सरे). I may sum up the interpretation in the words of the author himself thus:-- & If India is described as the leader or releaser of waters (अपां नेता or अपां अष्टा), the waters de

[&]quot;Tilak--Arotic Home. p. 269.

[§] Tilak Arctic Home. p. 295.

not mean the waters in the clouds but the waters or the watery vapours which fill the universe and form the material out of which the latter was created. In other words, the conquest over waters was something far more marvellous and cosmic in character than the mere breaking up of the clouds in the rainy season; and under these circumstances, it was naturally considered to be the greatest of Indra's exploits, when, invigorated by a hundred nightly Soma-sacrifices, he slew with ice the watery demon of darkness, shattered his hundred autumnal forts, released the waters of the seven rivers upstream to go along their ærial way, and brought out the sun and the dawn, or the cows from their place of confinement inside the rocky caves where they had stood still since the date of the war.'

LECTURE IX.

RELIGION AND MYTHOLOGY OF RIGVEDA.

(Continued).

Varuna associated with the spiritual domain-The proserver of Rita er meral order—the three aspects of Rita-Mitra and Varuna, Ahura and Mithra-Greek Ouranes -Varuua, a god of waters-The Asvins-their mythical and legendary character-marriage of Surya-Legends explained by the dawn and spring theories-the Arctic theory-Asvins and Diosouri-Their comparative insignificance in later mythology—the five solar gods—Savitri, the onlivening aspect of the sun-Sarva, the luminary-Mitra, the Boneficent-Pashan, the god of paths-Vishau-his three stridesvarious interpretations of the same—the name Sipivishta-Ushas, the most graceful croation of Vodic poetry-The long and many dawns-VII, 76. 3 .- The philosophy of Rigveda-The progress from many gods to one being-I. 164.-Ideas about doath and the world hereafter-X. 121.-X. 90.-the oreation hymn-Absence of pessimism.

Next we proceed to consider Varuna who is purely a Vedic god, i. c. a god occupying a very prominent place in the Rigveda but reduced to absolute insignificance in later mythology. The sphere of Varuna is quite opposed to that of Indra. The latter is associated with the domain of physical valour and command of external nature, but the former is principally concerned with the spiritual domain. Thus in the hymn VII. 83

addressed to Indra and Varuna conjointly, we have in verse 9 the functions of Indra and Varuna mentioned side by side, so as to bring out the contrast clearly—

'त्रज्ञाण्यन्यः समिथेश जिधतं वतान्यन्या अभिरक्षतं सदा।' Meral elevation and sanctity are the principal attribntes; of Varuna. Omniscience and undeceivableness are frequently spoken of Varuna. Varuna stands out as the god of justice, watching the conduct of all people and setting his spies everywhere for the purpose. He controls the destinies of mankind, and beholds all the secret things, that have been and will be done. He seizes and punishes transgressors with his bonds or necess; ho is a barrior against the irreligious and the wicked; sinning mertals can hardly expect to escape him (VII. 65. 3.). He watches or witnesses the truth and falsohood of people. 'सत्यानृते अवपद्यन् जनानाम्' (VII. 49. 3). His laws and ordinancos are in no case to be violated, and we see the worshipper often approaching Varuna in a suppliant attitude, pleading innocence and putting forth excuses for the sins if any and outreating him to show morey, full of a centrite spirit as he is. With all the awe and reverence which Varuna commands and inspires, there is at the same time, the element of homeliness and mercy; and the rolations between Varuna and his worshipper are often described as being very intimate. The worshipper is often like a little child committing offences through ignorance or temptation too strong for its weak and puorile nature and again obstinately asking for indulgence at the hands of the parent, i. c. Varuna.

The hymn VII. 86 is a typical hymn in this connection as it depicts Varuna as a guardian of moral order, angry at the misdeeds of men.

Varuna is visible to the mental eye of his wershippers (VII. 88. 2.). He is mighty and fixed in purpose, arrayed in a golden mail, surrounded by his messengers. His house has a thousand doors (VII. 88.5), he is foresighted and thousand-eyed (VII. 34. 10); he has the sun for his eye (VII. 66. 10); he is the king of all that exists (VII. 87. 6), a universal monarch, a self-dopendent ruler. Power, martial strength and sovereign authority are also spoken of as belonging to Varuna. He is called AST (mighty), HIT (VII 28. 4.), possessed of a mystic or miraculous power; Varuna is a god of illimitable resources and knowledge.

Here may be considered the meaning of the word ऋत in the Rigveda. Varuna is always spoken of as the preserver of ऋत, or as the spring of ऋत, (II. 28. 5. जा ऋतस्य)—This word ऋत in the Rigveda itself seems to denote three ideas, all allied with each other or one idea under three aspects owing to the difference of domains.

ist of all ऋत represents 'the cosmic order.'* ऋत rules the world and nature. The regular recurrence of the natural phenomena, the rising and setting of the sun, the coming of dawns and so on are all regulated by ऋत. The gods themselves are described as born of the ऋत, as observing and loving ऋत (e.g, ऋतजात ऋतज्ञ, ऋतज्ञ etc.). Also ऋतायम् VII. 87. 1.

⁴ See Bloomfield 'Religion' p. 126, 129,

From this, An comos to donote the correctness and regularity of the cult of god-worship or sacrifice. There is some principle, which guides and regulates the different events of the sacrifice, the coming of gods, the offering of oblations and so on and that is An. Thus the sacrifices are described as conducted by An as opposed to the magic rites and acts of witchcraft which may be, therefore, called An.

Last comos the third phase in the domain of the moral conduct of man. The moral law which every righteens man must observe,—it is the chief function of Varuna to see that it is so observed—is called war which may be thus paraphrased by सत्य and अवृत would then mean असल्य.

Though the world of Varuna is chiofly the moral world, still no moan exploits in the world of nature are ascribed to him. Varuna fashioned and upholds heaven and earth (VII. 86. 1; VII. 87. 5; VII. 87. 6.). Ho made the sun to shine and followed out channels for rivers. He knew the flight of birds in the sky, the path of ships on the ocean, and the course of the fartravelling wind.

Varuna is very frequently associated with Mitra and there are several hymns in Rigveda where Mitra and Varuna are addressed together. (cf. VII. 64 & 65). Mitra is of course the sun in his beneficent aspect the god of day or light, and what can Varuna be but the god of darknesss or night? Thus while commenting on VII. 87. I Sáyana remarks अस्तं गच्छन् सूर्य एव चक्ण इत्युच्यते। स ह स्वगमनेन राजीजनयति।

It is this very association of Mitra and Varuna, which has led Prof. Oldenborg to conjecture that Varuna should be the moon in contrast with Mitra who is the sun.

But according to most of the scholars, Varuna is connected with the chief good and wise god of the Zoroastrian faith viz. Ahura Mazd or Ormazd 'wise lord'. One reason for this connection if not identification is that Ahura corresponds with Asura which is a title frequontly applied to Varuna, though it must be remembered hero, that many other gods in the Rigveda are called 'Asura' (lit. strong). The second and convincing reason is the dual partnership of Ahura and Mithra in the Avosta which exactly corresponds to that of Mitra and Varuna in the Veda. Besides the attributes and functions of Ahura Mazd are vory similar to those of Varuna. Thus in the Zoroastrian system, Ahura Mazd orders the world and assigns to all good creatures and entities their respective places and activities. Ahura creates the divine order (i.e. Asha which corresponds to the Vedic Rita, and note that Ahura is called Ashahe Kháo which exactly corresponds to Khá Ritasya, in connection with Varuna in the Voda.). He made a way for the sun and the stars. As a guardian of divino order Ahura is not to be doceived and so on. This is enough to establish the great similarity between Ahura Mazd and Varuna.

Varuna, however, belongs not only to the Indo-Iranian period but to the Indo-European period, in as much as Varuna corresponds to the Greek Ouranos, on whose testimony Varuna should represent probably the oncompassing sky. Thus in Rigveda VIII. 41. 3. Varuna is described as ombracing the all. यहण may be derived from the root इ to cover and thus may mean the sky that covers or pervades all.

One more point I would touch, before taking leave of Varuna, and it is his later conception as a god of No doubt, Varuna is connocted with water evon in the Rigvoda. In VII. 87. 1, Varuna has not only cut out a pathway for the sun, but has led the watery floods of rivors onwards. In VII, 64, 2, भिन्न and वरुण aro called सिन्धुपती—'lords of streams or rivers.' In VII. 49. 3 Varuna is described as the sovereign of waters going amidst them. This connection with water (which really is only one particular aspect or manifestation of the En of which won is the lord), muy have probably led to the lator conception in the Puranas and even Sayana calls him 'जलाभिमानिनी देवता' while commonting on VIII, 58, 2, though generally he "Whon, on the regards Varuna as the god of night. one hand, the conception of Varuna as the all-embracing heaven, had been established, and en the other hand, the observation of the rivers flowing towards the ends of the earth, and to the sea had led to the conjecturo that there existed an ocean enclosing the earth in its bosom,* then the way was theroughly prepared for connecting Varnua with the ocean, in Inter mythelogy".t

^{*} Or it may be the ocean of wrist waters which made the sun and the moon to move, to rise and to set—(cf. आत).

[‡] Muir 'Original Sanskrit Texts' V.

Next we come to the pair of gods, the Asvins (horsenen). Hymns 67 to 73 of the 7th Mandala are all addressed to those gods. The character of these two deities is, however, very little defined, though they are no doubt, an object of a very enthusiastic worship. They are the sons of Vivaswat and Saranyu. They are often called sons of heaven' (दिवायात). They are physicians, asked to neglect the calls of other devotees and pass from house to house partaking of Soma. They come from a distance in a golden chariet, drawn by birds or bird-like horses. They are ancient, heautiful, bright, swifter than thought, possessed of wisdom and intelligence.

Of all the Vodic divinities the Asvins have the most pronounced mythical and logendary character. A maiden by the name of Súryá (i. o. daughter of the sun) is captivated by the youthful beauty of the Asvins, chooses thom for her husbands and ascends. their chariot. The most prominent characteristic of the Asvins is, however, that they are the most reliable helpers in need. All sorts of men and women have appealed to them for aid and have not been disappoint-The Asvins had made themselves so familiar with men that the gods had refused to admit them to a share in the sacrifice. This fact has led some people to conjecture that these Asvins must have been two heroes of wondrous exploits and of unparalleled beneficent. activity, so much so that they were afterwards deified and became the recipionts of most hearty praise.

It would be interesting to know what Yaska thinks of them. In the beginning of Ch. 12 he says.

'Some say that they are heaven and earth; others, day and night, others again, sun and moon.' (All these are explanations according to the Nalrukta school or the naturalists). The Aitihásikas (Traditionalists) say that they are two kings of virtuous deeds. Yáska also remarks that their time is the hour betwoen midnight and early dawn.

As said above, it is not easy to exactly define their character from the epithets applied to them. But let us see if we derive some help in this from a consideration of the several legends connected with them. They have been all briefly summarised in the fellowing extract from Prof. Macdonell's Vedic Mythology (§ 21) which I quote here for convenience.* "The sage Chyavána, grown old and deserted, they released from his decrepit bedy; they prolonged his life, restered him to youth, rendered him desirable to his wife, and made him the husband of maidens (I. 116. 10 etc.). They also renowed the youth of the agod Kali and bofriended him when he had takon a wife (I. 112, 15.)......But the story mest often referred to, is that of the rescue of Bhujyu, son of Tugra, who was abandoned in the midst of the ocean (समुद्रे), or in the water clouds (उद्मोर्च) and who, tessed about in darkness, invoked the aid of the youthful heroes. In the ocean which is without support (अनारभागे) they took him home in a hundredoared ship (शतारित्रम्-I. 116. 5). They rescued him with animated water-tight ships The sage Rebha,

^{*}For Asvins, I have to recommend to the student hymns 112,116, 117, 118 from the 1st Mandala.

stabbed, bound, hiddon by the malignant, overwhelmed in waters for ton nights and nine days, abandoned as doad, was by the Asvins, revived and drawn out, as Soma juice is raised with a ladle. (I. 116. 24; I. 112. 5). They delivered Vandana from his calamity and restored. him to the light of the sun..... They succoured the sage Atri Saptavadhri, who was plunged in a burning pit by the wiles of a domon, and dolivered him from darkness. (I. 116. 8; VI. 50. 10). They rescued from the jaws of a wolf, a quail (वर्तिका) who invoked their aid. (I. 112. 8). To Rijrásva, who had been blinded by his ernol father for killing one hundred and one sheep and giving thom to a she-wolf to dovour, they restored his eyo-sight, at the prayer of the she-wolf (I. 116. 16; I. 117. 17.); and curod Paravrij of blindness and lameness. (I. II2. 8.) Whon Vispala's log had been cut off in the battle like the wing of a bird, the Asvins gave her an iron one instead (I. 116. 15).......The cow of Sayu which had left off bearing, they caused to give milk (I. 116.22); and to Pedu thoy gave astrong, stiff, dragonslaying steed impolled by Indra, which won him unbounded spoils (I. 116. 6)."

Now all these myths connected with the Asvins have been explained by the dawn and the spring theories. Thus the recovery of the sun early in the morning, from the darkness of the night, and the restoring of brightness to the sun, in the spring, whose powers are mostly decayed in winter are the phenomena supposed to be referred to by these logends of restoring youth to an old man or curing the blindness of another. But these theories can not fully explain all the details

1/4

connected with these legends. Thus, for instance, the places from which all the helpless persons are rescued are generally described as full of darkness, as being bottomless and watery (I. 182. 6); and the period of distress is generally spoken of as being to days or to days and io nights and so on. Besides the incident of ऋजाश्व (I. 116. 16) killing 100 sheep and therefore being rendered blind remains altogether without explanation. So also the hymn 78 of M. V, referring to Atri Saptavadhri and especially its last three verses can not be satisfactorily explained on the basis of the two theories proposed above. Hence, another theory briefly called the Arctic theory is proposed, according to which all these legends refer to the long night and the long The sun sunk in the nether world of water and darkness and not merely a winter sun is the burder of all these legends, and the achievements of the Asvins refer to the rescue of the sun from the dark pi of the nether world or from the bottomless ocean o darkness.'*

The Asvins and Súryá have been identified or a least connected with the Greck Dioscuri, 'the sons of Zeus' Castor and Pollux, and their sister Helena (which more resembles in sound, Saranyu the mother of the Asvins). The word Asvin means 'one having a horse'; but this connection with horses comes out more strongly with the Dioscuri, who are celebrated tames of horses, riders of horses, and charioteers. The

^{*} Tilak, Arctic Home. p. 319.

also wore revered as helpors in noed and were called Anaktos 'protecting lords.'*

Thus, wo see that the Vodie Asvins combined the cosmical as well as historical and human characters, in a most conspicuous way. In later mythology, they occupy an insignificant position merely being physicians possossed of great physical beauty also. The legend of Chyavana referred to above, has been transformed into a neat story in the Mahabharata.

Noxt we have to consider the five solar gods viz., सिन्द, सर्थ, मिन, पुनन, and विष्णु. Though many of the attributes of these gods are very similar so as to make it difficult to distinguish one from another, still there are some distinctive functions peculiar to each of them and there is no doubt that in the Rigvoda these are not mere synonyms, but distinct ontities.

सनित (lit. the impeller, the enlivener) represents in distinction from others, the enlivening or quickening aspect of the sun. In this connection I recommend, the hymn IV. 54, of which every verse contains some form of the root ह in its various meanings, thus reminding the roader of the essential connection between the god समित and the meaning of the root present in it. Savitri is gold-complexioned, he ascends a golden car, beholds all creatures. This समित is sometimes expressly distinguished from सूर्य; but sometimes they are spoken of indiscriminately. Sáyana says in one place that the

^{*} Bloomfield, Relig. p. 113.114.

[‡] About the birth of the Asvins and their relation to Vasishiba see the extract from पृष्ट्या quoted by Sayana in his commentary on VII. 72. 2.

sun is called समित, bofore rising, and सर्थ, from sunrise to sunset. Yáska remarks—"Tho time of Savitri's appearance is whon darknoss has been removed and the rays of light have become diffused over the sky."

सर्व more refers to the luminary itself. He is the son of बी: and अदिति; his wife is उपस् (VII. 75. 5). In another place the dawns are said to produce him (VII. 78.3). He is drawn in a car by seven horses (VII. 63. 2); his path is prepared by the आवित्यंs (VII. 60. 4); Sûrya is. the preserver and soul of all things stationary and moving (VII. 60. 2); he is the viviner of mon (VII. 63.2). He is far-seeing, he boholds the good and bad deeds of all mortal creatures, ho is the ove of मित्र and बरण. In many places, however, a dependent and subordinate position is assigned to सूर्य, and his divino personality is. thrown into the background. The grand luminary becomes little more than a part of nature, created and controlled by those spiritual powers which exist above and beyond all material phenomena. The sun is thus one of the most transparent of gods. Hymn, I. 115 may givo a good idea of the godhcad of Súrya.

দিয় was spoken of above as an associato of ৰহল. He prominently represents the beneficent side of the Sun's power. দিয় sets people to activity, he holds fast the earth and heaven, he watches the people ceaselessly. Hymn III. 59 is specially addressed to দিয় alone, wherein ভালিখন and মান্ত্রন are his distinctive epithets. It is to be noted that this is the only hymn addressed to Mitra alone, in the whole of Rigveda. Elsewhere he is generally invoked along with Varuna. Thus it may be said that Mitra, though one of the old-

est gods, owing to his identification with the Iranian Mithra, has lost his indopendent individuality in the Rigveda.

qua is distinctly a shophord god. "His chiof claim" to usefulness is that he knows the roadways; protocts from their dangors such as wolves and robbers; guards cattle so that thoy be not dashed to pieces in the ravine; brings them home unburt, when thoy have gone astray, and, in general, restores lost things. Púshan drives the cows to pasture,...he carries a goad and his car is drawn by goats,...he lives on gruel," Hymns 53-56 of Mandala VI, may be read in this connection. This guar also can not be anything but a sun-god; since he is also described as lord of all things that stand or move and he is also the lover of guar. He is called argue 'glowing'; so also his ability as a path-finder and restorer of lost things points to an over-seeing heavenly body.

entire hymns and the soparate vorsos in which Vishnu is celebrated are much fower than those dedicated to the praises of Indra, Agni, Varuna, Asvins etc. Bosides, in most of the passages referring to him, he is generally lauded along with a host of other divinities. From this it may be cencluded that Vishnu was regarded in the Rigyeda as being on a footing of equality with other gods, or even subordinate to many of them, though he forms one of the two great gods of modern Hinduism, sometimes being clevated to the highest place. The essential feature of his character is that

o Bloomfield, Religion. p. 170.

he takes three strides covering the three worlds. Sákapúni regards these three strides as three manifestations of one and the same god, as Agni on earth, as Indra or Váyu in the atmosphere and as the sun in heaven. Aurnavábha, on the other hand, interprets them as the rising, culminating and setting of the sun. Max Müller also interprets this myth as referring to the three stages in the daily course of the sun. In the Brâhmanas and later works, however, this feature is developed into the story of Vishnu appearing in the form of a dwarf and recovering the earth from the demons headed by Bali, by taking his three strides.

According to Mr. Tilak's theory, howover, those three strides can not refer to the daily course of the sun, but to the annual course when the year was divided, as at the circumpolar regions, into three parts, of which two parts or eight months, tho sun was above the horizon and hence the two strides of Vishnu are spoken of as boing visible; while the third part or four months, the sun went below the liorizon into the nether world of darkness or of waters, providing continuous darknoss, and thus the third stride is invisible. In I. 155. 6, Vishnu is described as sotting into motion his ninety steeds with four names, which can only refer to the 360 days of the year with the four seasons. So also in VII. 99, verses 4 and 5, Vishnu is associated with Indra, in the exploit over Vritra, and Vishnu is described along with Indra as generating the sun, the dawn, and Agni, and breaking the ninety-nine cities of Sambara—which points to the conclusion that the three strides of Vishnu should

also refer to the annual course of the sun, with the

long day and long night.

With this interpretation, the meaning of the word शिपिविष्ट may be well explained. The verse VII. 100. 6 runs thus—'What was there to be blamed in thee when thou doclaredst "I am Sipivishta"? Do not conceal from us this form, since then didst assume another shape in the battle.' Yaska (Nir. V. 7-9), proposes two interpretations, one bad, following Aupamanyava and the other, good. शिपिविष्ट may mean 'शेप इव निर्वेष्टितः' 'enveloped like the private parts or with rays obscured' (अप्रतिपन्तरिक्तः). It may be a laudatory appellation also, meaning 'eno whose rays (शिपपः) are displayed.' (आविष्टाः)

शिपिनिष्ट refers to the tomporary obscuring of the rays of the sun when he entered into the nether world (रजारापाके क्षियन्त VII. 100. 5.). 'The poet, therefore, asks Vishiu not to be ashamed of this epithet, because says he, the form indicated by the bad name is only temporarily assumed as a dark armour for the purpose of fighting with the Asuras, and as it was no longer needed, Vishiu is invoked to reveal his true form to the worshipper.' * Thus the story of Bali and Vâmana is the story of Vishiu going down to the nether world dark or diseased, to plant his third stop on the head of the Asuras, or in a dark armour to help Indra in his struggle for waters and light, a struggle which lasted for a long time and resulted in the flowing of waters,

^{*} Tiluk-Arctic Home-p. 332.

^{- §} शिपिविष्ठ indicated some bodily affiliation or skin-disease, though what it was exactly is not known.

the recovery of the dawn, and the coming out of the sun in a bright armour, after a long and continuous darkness.

Sâyaṇa generally derivos विष्णु as ज्यापनशील, but Prof. Bloomfield has proposed a new otymology—वि+स्तु 'through the back' on the ground of a passago in the Sâma-veda (2. 1024) 'यता विष्णुर्विचक्रमे पृथिज्या अधि सानवि' 'Vishṇa strode through over the back of the earth.'

Some other acts of a high character are also attributed to Vishuu. He is said to have established heaven and earth, to contain all the world in his strides, to have made the atmosphere wide, stretched out the worlds. His greatness is described in one place as having no limit within the ken of present or future beings. 'In the highest stepping place of Vishuu, there is the fount of honey' (I. 154. 5).

Nothing can surpass the beauty of the hymns addressed to the goddess Ushas; and as Macdonell remarks, this deity is the most graceful creation of Vedic poetry, there being no more charming figure in the descriptive religious lyrics of any other literature.* The 7th Mandala contains seven hymns (75 to 81) out of the twenty hymns addressed to Ushas in the whole of the Rigveda. The freshness and sweetness about these poems is simply indescribable. While reading such verses as "Lo, the rich dawn casts, as it were, her garment from her, and moves on, queen of the world: this beautiful and wonderful goddess brings heaven to life again and stretches to the ends of earth and sky."

^{*} Macdonell's Vedio Mythology, p. 46.

(III. 61. 4), we feel as if we are going to be hold willing captives of a primitive Shelley or Keats.

The Dawn is the daughter of the sky, and sister of the night. The sun is her lover. The glorious mistross of the world is borne on a shining chariot, drawn by ruddy horsos, like a richly drossed daneing girl, sho goos on smlling and confiding in the irresistible power of her attractions, unvoiling her besom to the gaze of the beholder. She dispels darkness, disclosing the treasures she had conecaled, illuminates the world, awakens the fivo races of men, sho is young. being born again and again, yet old and immortal, sho is the life and breath of all. Even in this most ecstatic pioco of poetry concerning the Dawn, the Vedie poet-priost can not lay aside his trait of practicalness and the sacrific-cult. The Dawn is the herald of the sacrifice, with hor appearance commences the sacrificial day, as it were, and she is often entreated to bring to the worshipper wealth, children, slaves otc., to afford protection and to prolong life. The Dawn is thus another instance of a transparent god, whose natural character is not in the least obscured by personification.

Can it be the diurnal dawn, which could excite such ecstacy and rapture in the mind of the Vedic poet-priest? Of course, every one is aware of the fresh and sweet influence of the early dawn, which may deserve the poetic imagery, all that is said about her in the Veda. But there are certain phrases and expressions which are used of her and which can not be satisfactorily interpreted as referring to the daily dawn. The

long, continuous dawns, (VII. 76. 3; II. 28. 9; VII. 9, 1; VII. 63. 3.) so much so, that oven the whole of the Rigvoda could be rocited before suuriso, the circular movement referred to, (I. 123. 8. and 9; III. 61. 3; VII 80. 1.) the thirty parts of which they were made up (I. 123. 8; VI. 59. 6), all these go to show that the dawns referred to must be longer dawns possible at the circumpolar regions.*

Before taking leave of this subject, we may consider the interpretation of the following verses in the 7th

Maudala, bearing upon the subject. ‡

"तानीवहानि बहुलान्यासन् या प्राचीनसुविता सर्यस्य। यतः परि
जार इयाचांती उपा वहसे न उनयंतीय" VII 76. 3. The
verse means—'Those days were many which were
aforetime at the rise of the sun and about which, oh dawn,
thou wast seen moving on, as towards a lover, and not
like one (woman) who forsakes,' which clearly establishes two facts that (1) many days passed between
the appearance of the first morning beams and sunrise; and that (2) those days were faithfully attended
by the Dawn which is possible only in the case of the
circumpolar dawn.

Sáyana explains the verse in a farfetched manner, not understanding how several days could pass before sunrise and hence proposes to take the word अहन to mean उप:प्रकाशपुरतकाल and तानि = splendours and बहुलानि अहानि accusative of time. Other western scholars also take अहानि as splendours, lustres. Griffith translates 'great is the number of mornings,' but does not explain

o Tilak's Arotic Home-p. 108, 109.

[†] Tilak-'Arotle home'-p, 88 ff.

how it is possible. So also III. 61. 3 and VII. 80. t may dosorve special consideration, in this connection.

So far I have spoken of the mythology of the Rigveda. Before concluding, I should like to make in this place, a few romarks on the philosophy of the Rigveda.

India is ofton spoken of as the cradle of philosophy. Nowhere are made so bold and daring attempts to solve the riddle of the universe as in India, where there lived kings like Janaka and Ajátasatru, Bráhmanas liko Yájňavalkya and Nachiketas, schollasts like Sankara and Kumárila. the student of Rigveda will naturally be curious to know what philosophy is taught by the Rigveda. He has, however, to be warned that no cut and dry system is taught hero, for which he has to go to the Sútras. Nor do philosophic speculations form the main burden of the Rigveda as they do in the case of the Upanishads. However, the seeds of the Upanishad thought are seen scattered about here and there in the Samhitá of the Rigveda. Though the general religion of the Rigveda refers to a plurality of naturo gods, still the tendency to monism is distinctly seen in some of the hymns. Just as the Rishis thought that the several natural phenomena had some divine forces behind them which were personified into so many gods, in the same way they advanced one step further and came to think that all these were tho aspects of one and the same all-porvading divine force which manifosted itself into the different phenomena. Thus, there was a transition from many gods to one god. Thus in I. 164.

sages call the one being in many ways; they call it Agni, Yama, Matarisvan." Here the soveral Vedic gods are stated to be but one boing. This whole hymn (1.164) is nothing but a collection of fifty-two verses of poetry, all of them except one, being riddles whose answers are not given. "The subjects of those riddles are cosmic, that is, pertaining to the nature phenomena of the universo; mythological, that is, referring to the accepted logonds about the gods; psychological that is, portaining to the human organs and sensations or finally crudo and tentative philosophy or theosophy. Heavon and Earth, Sun and Moon, air, clouds and rain; the course of the sun, the year, the seasons, months, days and nights; human voice, self-consciousness, life and death; the origin of the first creature, and the originator of the universe-such are the abrupt and bold themes" *

How the thought progressed from many gods to one being or from the simple give-take religion, to such abstruse speculations can be explained in some such way as follows. It was at the sacrifice that the tendency of philosophising must have first grown and prespered. The various phases of the sacrifice, the various implements and little acts must have been subjects of speculations mystic and thosephic in character. The mere technic of the sacrificial ritual, in the course of time, must have coased to satisfy the minds both of the patron and the priest, so that more philoso-

Bloomfield, Religion-p. 218.

phic food was required, thus quostions and answers regarding the origin of man and similar topics must have been discussed between them, giving rise to what are called Brahmodyas. So also the old mythological gods in strong flosh tints must have begun to disconcert them and faith must have been gradually lost. So that abstract and symbolic embodiments of the divine idea then took the place of the gods of nature. The ideas of the nature above described are scattered about here and there even in the midst of the eldest portions, so that it may be asserted with truth, that there is no period whatever when such questions as 'whence I come?' 'who I am?' 'what is the origin of this visible world with all its plurality?' ceased to occupy the Vedic Rishis.

In spite of the worldly character of the rewards, asked for by the Vedie Rishis, such as, long life, cattle, warlke sons, gold and so on, sometimes there seem to be haunting their minds, ideas about death and the world thoreafter. The idea that the dead forefathers after death are dwelling in a world, in the company of gods, where we ourselves shall have to go after death, soems to be expressed or implied in several places. Thus we have in I. 91, 1 'under your guidance, oh Indra, our wiso fathors recoived their share of treasure among the gods'-so also I. 125. 5. The thirst for life haunts the mind of the Rishi and he leads himself to boliove that the life after death in the world of gods and fathers, is eternal, at least as compared with the life in this earth. Thus in V. 55. 4, V. 63. 2, that life is called अस्तत्व or immortality.

all things were asked and answered in a crude and tentative manner by the Vodic Rishis. Thus in hymn X. 121, हिरण्यगर्भ is described as existing in the beginning of the creation, the sole Lord of beings, supporting heavon and earth. In X. 90, the hynn popularly known as quagra, the idea that the whole world is one being, the विराद्युह्न who having pervaded the world from all sides, still remained over and above it, is dealt with. In the hymn X. 82, waters are spoken of as boing the first substance or prime cause. Road versos 5-7. In hymn X. 125, बाक् is represented as the companion and upholder of the gods and as the foundation of all religious activity and its attendant Hymn X, 129 is a typical hymn in this connection. It is called the creation-hymn. Prof. Doussen says of this hymn-" In its noble simplicity, in the loftiness of its philosophic vision, it is possibly tho most admirable bit of philosophy of oldon timos...... No translation can over do justice to the boauty of the original." "The avowed purpose of all philosophy is to account for the presence of the world and its contents as somothing which is not self-evident, and noods to be explained beyond the point of mere individual experience, or analysis through ompirical knowledge. The creation hymn performs this act not without some unsteadiness and with potulanco duo to scepticism. In putting forth a fundamental principlo without porsonality it does not fall far behind the best thought of later times inside or outside of India."

One thing, however, must be noted and it is that pessimism and the metempsychosis, the two main threads which are woven in everything Indian, and which are the distinguishing traits thereof, are wanting in the early philosophy of the Vedas.

LECTURE X.

SOCIAL LIFE TO BE GATHERED FROM THE RIGVEDA.

Allusions to the names of rivers in the 7th Mandala—The country inhabited by the early Aryan coloulsts—villages and clies—forts—principal means of sustenance—different occupations and trades—gambling—family—marriage, the most second and important function—burning of widows—widow—remarriage—state—formation of tribes—images of gods—the easte-system.

It has been new indisputably proved by comparativo philology that the Indians, Iranians, Greeks, Slavs, Germans and Italians had common ancestors, dwelling in a common country, whether it be central Asia or Nerway, speaking a common language, in far distant ages. So also we know from a comparison of the Avesta and Vedic Sanskrit, that after the separation of the eastern branch from the western branch, the former i. e. Iranians and Indians lived together for a long timo, calling thomsolves Aryans, to distinguish thom from other tribes. After their separation from the Iranians, the eastern Aryans or Indians passed into India through the Wostorn passos of the Hindukush. The part of India which those Indian Aryans occupied, during the composition of the Rigveda is sufficiently indicated by topical references in the Rigvoda, especially the names of rivers. Accordingly the Aryans must have first settled themselves along the banks of the Sindhu in the Punjab, where most of the hymns of the Rigveda Samhita must have been composed, before they passed to the regions of the Ganges where later Brahmanism dominated and which saw the composition of the Brahmanas and Upanishads. In the 7th Mandala the following passages may be noticed as mentioning the rivers. Thus we have, 18. 19; 18. 8; 18. 9; 18. 24; 95 and 96 in honour of the Saraswatí.

The Sindhu, the modern Indus, sometimes designated Samudra, is the much-praised Sarasvatí (lit-rich in water) in the Rigvoda, by whose greatness, the singers were inspired into most glorious strains. The other rivers mentioned are Vitastû (lit. stretched out) now Jhelum, Asikní (black) now Chinab, Parushní, Irávatí now Rawi, Vipás (fetterless) now Bias, Sutudrí (changed later on to Satadru=hundred course) now Sutlaj, and the Yamuná. The Ganges which in later times became the backbone of India is not mentioned in the Rigvoda except X. 75. 5. So also, the Kubhá (Kábul) and Suvástu (the Swat) are referred to. Thus East Kabulistan and the Punjab may be regarded as the country where the early Aryan colonists lived.

Villages and cities are referred to, e.g. I.:114. 1, I.
44. 10. Iron cities or fortifications are mentioned in
VII. 3.7; VII. 15, 14; VII. 95. 1. Although these are
alluded to as figurative expressions of the means of
protection afforded by the gods, they, no doubt, suggest
the idea of forts, consisting apparently of a series of
concentric walls, as actually existing in the country at
the time.

RIGVEDA.

190

Cattle-keeping and agriculture are the principal means of sustenance. We frequently most with prayers for herds of cattle, cows and horses, shoop and goats, especially the milch-cows which is 'tho sum of all good which Indra has croated for our onjoyment.' As for food, frequent mention is made of यन (I. 23. 15, I. 117. 21 otc.). Rico is not referred to in the Rigveda but is named in the Atharva-veda. (cf. VI. 140. 2 ब्रीहिमत्तं ययमत्तमधो मापमधो तिलम्). Parched corn or धानाड are several times montioned (III. 35. 3 and 7, III. 52.5); cakes and moal mixed with curds or butter (करमा) are offord to the gods, (III. 52.7; VI. 57.2). Plants are frequently alluded to and are even invoked, (VII. 34. 23; VII. 35. 5, ospecially X. 97. 15). The cutting up of flosh, apparently for sacrificial purposes is mentioned in I. 161. 10. In V. 29. 7, VIII. 12. 8, VIII. 66 10, mention is made of the gods cooking or oating large numbers of buffaloes. From this it may be inferred that they also formed a portion of humn food. The drinking of Soma is referred to. The Soma juico was not only dear to Indra and other gods, but it was drunk by the worshippers themselves and its effects on them are occasionally described. Thus see VI. 47. 3: VIII. 48. 3. Wino (Surft) was also in use. Thus sco VII. 86. 6, VIII. 2.12. (In rogard to the light in which wine-drinking was regarded in later times, the reader may consult Manu XI. 54, 90, 93-97, 148f, 249.)

Different occupations and trades are mentioned. In this connection, one should read especially Rig. IX. 112. 1-4. The construction of chariets is often referred to, and the skill shown in the composition of

hymns is described as a fabrication, and compared to the art of the carriage-builder. Thus cf. II. 19. 8, II. 35. 2 etc. Weaving was universally practised, as appears from the metaphorical use of the verb & to weave' for the composition of hymns etc.; cf. VII. 33,9. and 12. The art of ship-building was known. cf. II. 39. 4; I. 25. 7; VII. 88. 8 f. Rope-making is referred to in VII. 84. 2; working in leather VII. 63. 1; VII. 89. 2.; VII. 103. 2. Agriculture is recommended to the gambler in X. 34. 13. Water courses, both artificial and natural are alluded to in III. 45. 3; VII. 49-2, from which we may reasonably infer that irrigation of lands under cultivation may have been practised.

Gambling was extensively practised; cf. VII. 86. 6. The whole of the hymn X. 34. should be road in this connection. Thievos and robbers are referred to in VII. 55. 3; VII. 86. 5.

The foundation of the state was formed by the family, at the head of which stood the father as lord of the heuse. The marriage was regarded as the most sacred and important function. 'The Vedic singers* knew no mere tender relation :than that between the husband and his willing, loving wife, who is praised as 'his heme, the darling abede and bliss in his house." † The high position of the wife is above all shown by the fact that she participates in the sacrifice with her husband; with harmonieus mind at the early dawn, beth, in fitting words, send up, their prayers to the

^{*} Kaegi, Rigveda, p. 15.

[‡] Rig. III, 53, 4 and 6,

eternals.* The so-called wedding hyun X. 85 may be read in this connection. In the new home, the young wife is subject to her husband, but at the same time mistress of the farm-labourors and slaves, and of parents and brothers-in-law.

All this is comprehensible only on the supposition that monogamy was the rule. And this is pointed to directly by the text. cf. I. 124. 7; IV. 3. 2, X. 71. 4; I 105. 2. However, there are some traces of the existence of poligamy, amongst Kshatriyas though it was, no doubt, the exception. cf. I. 62. 11; I. 71. 1; I. 105.8 (= X. 33. 2); VII. 26. 3; VII. 18. 2; X. 43. 1.

The woman scens to have been froe to make her choice of a husband, as appears from X. 27. 11 and 12.

Marriage was looked upon as an arrangement founded by the gods, the aim of which was the mutual support of man and wife and the propagation of their race; therefore, it is the often-repeated wish of the Vedic singer to beget a son of his own flesh, whose place could nover be filled by adoption. See VII. 4. 7 and 8 which alludo to the inferiority of the adopted son to the natural-born one.

As for the burning of widows the practice does not seem to be evidenced directly by the Rigvoda; yet, from other indications we have to accept the probability that the custom was also observed now and then in the Vedic period. Atharva Veda 18, 3, 1 proves the death of the wife with her departed husband as an old custom year un. But that the custom was not compulsory nor very general follows from such passages as X. 18. 7 and

^{*} Rig. I. 122, 2; X. 86, 10.

X. 40. 2. The former passage is regarded as a distinct sanction for widow-burning by reading 歌: in place of 歌道. That the usage only received decided sanction in late times is evident from the fact that "the Indian Law-literature, from the oldest times upto the late period, treats fully of the widow's right of inheritance and that the isolated references to the burning of widows in some of the lawbooks enderse it only as a matter of choice."*

As for the quostion of widow romarriage, its general non-prevalence is naturally expected from the extremely important and sacred character of marriage. However, there is a passage which distinctly bears testimony to the fact that a widow was allowed to marry her husband's brother. In X. 40. 2 we have,

कुद्द स्विद्धीया कुद्द बस्तीरश्विना कुद्दाभिपित्वं करतः कुद्दोषतः । की यां हायुत्रा विधवेत्र देवरम् सर्यं न योषा कृष्णते सपस्थ ओं॥

In clucidation of the comparison in 1.3, Prof. Roth in Nir. III. 15 refers to Manu IX. 69, 70, where it is onjoined that in certain circumstances a widew shall be married to her deceased husband's brother. In verse 60 of the same adhyaya of Manu, it is ruled that the union shall only subsist until one son has been precreated.

Allusions to conjugal infidelity and sexual immorality are rarely met with, cf. X. 34, 4; X. 40, 6; II. 29, 1.

Women are sometimes spoken of as ungovernable and fickle. cf. VIII. 33. 17

Untruth is condemned in IV. 5. 5 and the gods are said to punish lying (I. 152. 1; VII. 49. 3; VII. 84.4.).

^{*}Kaogi, Rigveda, p. 118 notes.

On the foundation of the family rosts the state. For protection against threatened attacks and for the purpose of maranding incursions into the torritory of other peoples, conlitions were formed between tribes: but in times of peace the tribe itself formed the highost political unit. The government was menarchical as is to be naturally expected from its origin in the family. The king steed at the head. Several kings or leadors are mentioned in the hynnis of the Rigveda. Thus ten kings are alluded to as having fought against Sudas (cf. VII. 33.3. VII. 83. 6 ft). In VII. 18. 2, Indra is represented as living in lights, as a king among his wives which appears to indicate the existence of royal polygamy. It appears that it was regarded as eminently beneficial for a king to outertain a family-priost and wo find that the liberality of different princes to the Rishis or priosts by whom they were attended, is celebrated in numerous passages. The hymn X, 173 in which blessings are invoked on a king, may be read in this connection.

As for the religion and wership of the Vedic people, I have said a good deal in a separate lecture. An interesting question may be touched upon, here, and it is this 'did the Vedle Indians make images of their gods'? Max Muller (Chips from a German Workshop I. 38) says "The religion of the Veda knews of ne idels. The worship of idels in India is a secondary formation, a later degradation of the more primitive wership of ideal gods". On the other hand, the opposite view is put forth by Dr. Bellenson, according to whom, the use of such appellations as 'किंग नर:' 'प्रकास:' in connection

with gods, preves not only that human forms were assigned to gods in imagination, but the gods were also actually represented in a sensible manner. He adduces in his support, II. 33-9, I. 25-13, V. 52-15, in which last passage the Maruts soom to be distinguished from their gods i. c. from their images. The question, however, can not be decided either way, for the present.

De the Vedas centain the caste-system? Nething dominates the life of a Hindu more than roligious institutions; and no institution is mere tyrannical in its influence than the caste-system. Its gretesque inconsistencies and hitter tyranny have goue far to make the Hindu what he is. Bleomfield cendenns it downight and remarks, "The corresive proporties of this single institution, more than anything else whatseever have cheeked the development of India into a nation. They have made possible the spectacle of a country of nearly 300 millions of inhabitants, governed by the skill of 60,000 military and 60,000 civilian foreigners."

This is not the place to rofuto or justify these remarks. We are concerned with the question whether there is anything like the present caste-system evidenced by the hymns of the Rig-Veda.

It must be first stated that nothing like the present divisions and sub-divisions which have made the easte systom a caste-chaes, has place anywhere in ancient Sanskrit Literature. There is a Hindustani proverb 'eight brahmans, nino kitchens.' It is only the fourfeld division into Brahmana, Kshatriya, Vaisya and Súdra that is very frequently referred to. For the

^{*} Religion, Bloomfield, p. 5.

sovoral passagos in Bráhmanas, Puránas and othor works referring to casto and its origination, I may refer you to Muir's O. S. Texts Vol. I.

In the hymns of Rig-Veda, however, there is only one passage referring to this four-fold division and that is X. 90-12. This hymn, generally known as the Purusha-Súkta is, however, regarded by many scholars as hoing very late in character and belonging to the last outskirts of the Samhitá-period, on account of several indications of its modern character, such as the use of terms like Brahmana and Vaisya which rarely or never again occur in the Rig-Veda, the panthoistic ideas, which do not find a place in the older portions of the Rig-Veda, the smoothness and regularity of metre and others. Thus it is argued that even the conception of the four castes is foreign to the Rig-Veda proper; and even this allusion is more an allogorical representation than a literal statement of facts.

Others, however, (Dr. Haug, for instance,) hold that the hymn may not be necessarily regarded as modern in character, because such cosmological and speculative conceptions are met with in about every part of the Rig-Veda Samhitá and that the allegory is most significant and instructive.

Thus Dr. Hang remarks*—"Now according to this passage, which is the most ancient and authoritative we have on the origin of Brahmanism and caste in general, the Brahman has not come from the mouth of this primary being, the Purusha, but the mouth of the latter became the Brahmanical caste, that is to say,

^{*} Mult, Original Sanskrit Texts, Voi. I. p. 14.

was transformed into it. The passage has, no doubt, an allogorical sense. Mouth is the seat of speech. The allogory thus points out that the Brahmans are toachors and instructors of mankind. The arms are the seat of strength. If the two arms of the Purusha are said to have been made a Kshatriya (warrier), that mouns, then, that the Kshatriyas have to earry arms to dofond the empire. That the thighs of the Purusha wore transformed into the Vaisya means that, as the lower parts of the body are the principal ropository of food taken, the Vaisya caste is destined to provide food for the others. The creation of the Sudra from the foot of the Purusha indicates that he is destined to be a servant to the others, just as the foot serves the other parts of the body as a firm support." It is this verso 12 of the Purusha Súkta which is generally put forth as an evidence for the determination of easte by birth. By the side of this, however, may be cited the passage from the Bhagavadgitá-" चातुर्वण्ये मया सर्ध राण-कर्मविभागका;" which affirms that the fourfold division of caste doponds upon qualities and actions (as opposed to birth). Even this passago is, however, interpreted by the orthodox people in their favour, by laying stress on the word ' स्टम'.

LECTURE XI.

GRAMATICAL PECULIARITIES OF THE VEDA.

Vedic inflexional forms, comparatively more varied and regular.—Peculiarities of Sandhi—Peculiarities of Declension—Peculiarities of conjugation—Infinitives and Gerunds—The aubjunctive—Peculiarities of syntax.

A goneral comparison of the Sanskrit of the Rigveda with the Classical Sanskrit will show that the former is more rich and regular in inflexional forms than the latter which has become more rigid and less multi-Thus, for instance, in the case of declension of nouns, where we had originally two or three forms for a particular case-ending, we have now only one; and in the case of the conjugation of verbs, whole tenses or moods have become obsolete. Thus, there is nothing in the Classical Sanskrit corresponding to the Subjunctive in the Veda, and the Vedic infinitive has about eight forms, while the classical infinitive has only one In the same way a greater varioty can be marked in the Vedic Sandhi as compared with the Classical Sanskrit In order to see the truth of all this, it is necessary to be acquainted with the grammatical forms which the Vedic Sanskrit has in contradistinction from the Classical Sanskrit, which we today proceed to note with illustrations from the 7th Mandala, as far as possible.

To begin with, in the matter of Sandhis in Classical Sanskrit, hiatus is generally ferbidden; but in the Vedic Sanskrit, it is very abundantly admitted. Thus in innumerable instances wand war are to be read as wand wand loss eften a leng vowel is to be reselved into two vowels, in order to make good the metro. As illustrations, the student may refer to Rigveda VII. 14-14, 66-114, 4-14, 4-84, 6-34, 14-27, 21-48, 22-44, and so on.

The disappoarance of an initial of after a final of or sit which is the invariable rule in Classical Sanskrit, is, in the Veda, only an eccasional eccurrence; and in this respect, there is no accordance between the written and spoken form of the Vedic text. The of is many times clided where the metro requires it, while it is retained, where the metre requires its omission. Here are some instances, VII. 1-7ⁿ, 1-8ⁿ, 1-9ⁿ, 1-11ⁿ, 1-19^h, 66-5ⁿ, 61-3^h, 18-7ⁿ, 33-11^h, 57-5ⁿ, 71-5ⁿ.

The final है, ज, ए ef a dual ferm are maintained uncombined with the following vowel, but the Rigveda shows many exceptions to this, especially before इव e.g. VII. 87-2°, 72-3°, 104-6°. In ecombination with इव following, without regard to the form of the ending (e.g. अ: आ: etc. or अम. इम. उम etc.) is so frequent that the simplest explanation is the presence of the parallel form a regularly used in Pálí and in the verses of Buddhist Sanskrit.

The change of π to π by the preceding of π , π , takes place in the Veda, eccasionally even when the latter bolong to a different word, essentially unconnect-

Especially the prenominal forms was and we are thus affected vory eften.

Original linal & is retained after a masal. Thus final आन, ईन्द्र कन and भून become औ, ई, के and म, the म after these musalised vowels being treated as if it were after pure vowels. Thus we have दस्पेरोक्सः (VII, 5-6°), so also 6-3' 3 3', 10-5', 11-1'.

In the Veda, the final vowel of a word-generally at, much less elten z or z-is in a large number of cases prelonged, usually when it is favoured by the metro, but somotimes evon where the metro epposes the change.* Such words are (1) particles like अथ, अथ otc. (2) case-forms like पना तेना etc. (3) verb-forms like पिबा, स्था, छाणुता, विका, युक्या, यदा, क्रधी, फुणुहाँ etc., and (4) gerunds in v.

Next we preceed to the Declension of norms. Let us begin with the musculine and neuter neuns ending in M. In their case, the singular of the Instrumental (both m. n.), shows a peculiar form, either ending in qui or ar. The following are instances from the 7th Maiidala;--18. 17 पेत्वेना ; 55. 7 तेना सहस्येना; 71. 4 पना; 93. 7 पना ; 32. 7 त्वा इपित (त्वा instr of त्य) ; 13. 2 माहित्वा ; 20. 4; 23. 3; 58. 1; 61. 4; 97. 8; 100. 3.

The Dual of the Nominative and Accusative (m. only), usually ends in आ; while और is only exceptional. For occurs generally, (1) at the end of a पाद, (2) before consenants, (3) before an initial vowel with which it is fused and is never used before vewels with hlatus. A good illustration where both forms occur side by side is I. 184, 1 'ता बाम अब तावपर हुवेम '.

^{*} See Whitney, grammar, 248 article.

Instances of forms ending in Mr arc VII. 1. 17°, 2. 7°d, 18. 22°, 70. 1, 50. 1, 67. 5. Howover, note 50. 2, 84. 2 where Mr occurs before consonants.

Next is to be noticed the Plural of the nominative and vocative (m.) There are two endings आस: and आ:. The forms in आस: are about one half as numerous as those in M: in Rigveda. In the Atharvaveda, there are comparatively very few forms in आस:; thus the ending आस: is older and goes gradually out of use in the Vedic period; we have also many instances, where both forms stand often side by side; o.g. Rigveda, IV. 25. 8, VII. 97. 6. A pada deficient by one syllable is often emended by substituting आस: for आ:; o.g. VII. 35. 14^d. Other instances of आस: in the 7th Mandala are 1. 9, 1.15, 1. 17, 4. 3, 15. 9, 16. 3, and many more.

For the Plural of the Nominative, Accusative, and Vocative (Neuter) there are two endings, आ and आनि. The older (आ) has far outnumbered the younger in Rigveda, though there are many instances where both stand side by side. In the Atharvaveda the preportion is much roduced, though the older form has held its own against the younger form, bettor than any other similar Vedio form. Instances in the 7th Mandala are 1. 18^a, 3. 4^b, 3. 10^a, 4. 1, 4. 2, 5. 7, 18.1 and so on. genesis of the younger form can be best explained by supposing that there is a transfer from the a declension to the अन् declension which is also shown by the coexistence of such forms as कविमा, कविमाणि etc., cf. VII. 19. 4, VII. 67. 9. Sometimes a पाद deficient by one syllable can be emended by reading आनि for आ e. g. VII, 4. 2.

For the Plural of the Instrumental (m. & n.) there are two endings que and d: both almost equally frequent in the Rig-Veda, the older however dying out gradually in the Vedic period. Both semetimes occur side by side. The only trace of the ending que in later Sanskrit is que: (from *44). Instances in the 7th Mandala are—2-8, 2-11, 7-2, 7-6.

Next, we come to nouns in आ. In the case of these (feminine), for the Singular of the Instrumental, there are two endings, आ and अया. The older ending is about as frequent as the younger. The older ending is generally applied to stems in ता व्यवसार (व्य या), (with हआ व्य naturally the younger ending would sound very badly). Instances in the 7th Mandala are, 1-11, 1-14, 18-7, 23-1, 32-14, etc. One instance of the poculiar Sing. Dative fem. is the form अधीरत in VII, 1-19 ".

For the Plural of the Nominative (f), आः is the very general ending, but in very few cases आसः (per. haps extended from the masculine) is also met with. Thus we have VII. 28-4 'द्विमित्रासः श्वित्रयः', VII. 18-3 'वस्त्रधानासः…… गिरः'.

Next we come to stoms in \mathbf{x} (f.). For the Instrumental Singular, the final is only lengthened in the Veda. Instances in the 7th Mandala are, 1-1, 1-21, 20-2, 25-1, 32-15, 32-21. For the Locative Singular, the final \mathbf{x} is changed to $\mathbf{x}\mathbf{i}$, (1) generally before consonants, (2) before an initial vewel with which it is fused, (3) never used before vewels with hiatus; e.g. VII. 2-5, 18-19, 19-3, 27-1. Even masculine nears in \mathbf{x} have sometimes a Lec. Sing. form ending in $\mathbf{x}\mathbf{i}$; e.g. $\mathbf{x}\mathbf{x}\mathbf{i}$ or sometimes extended to $\mathbf{x}\mathbf{x}\mathbf{x}\mathbf{i}$? The Genitive and Ablative Singu-

lar of masculino nouns in इ is sometimes made by only adding the termination without having Guna; c. g. अर्थः from अरि. The Nominative Plural of feminine nouns in इ is sometimes like भूतीः etc.

As for nouns in (च mas, and neu.) we meet with such forms as Abl. Sing. बरबः VII. 15-4, Dat. Sing. करबे VII. 25.4, Loc. sing. सानिष्, Instr. Sing. करबे VII. 21-6, 4-5. Nonns in ई font have Nom. Plu. like देवी:—2-8, 10-3, 5-3, 26-4, Instru. Sing. जमी. Nouns in इ neut. have for their nom. plu. such forms as:—इस्मी VII. 56-8; हाची VII. 56-12; अपनी VII 23-3. In the case of fem. nouns in च, we have such forms as the Accu. Sing. सन्बम् VII. 8-5.

Nouns ending in π mas, and fom, have their Nom. Dual ending in π which occurs (1) at the end of a pilda, (2) before consonants, (3) before an initial vowel with which it is fused, (4) nover before vowels with hiatus. e. y. $\pi \pi \pi \tau - 7-3$. $\pi \pi$ and $\pi \pi$ are often found used for π and $\pi \pi$ and π and

In the case of nouns in अन्, we have a peculiar Loc. Sing, form without any termination. e.g. झ्योमन् (= झ्योमनि), परिज्यनि (= परिज्यनि) otc.

Noxt, I may proceed to conjugation. Hero I must contont myself only with noting a few peculiarlties which are very frequently met with. For a fuller and exhaustive treatment of the Verb-inflection in the Rig-veda the student is referred to Avery's Verb-inflection in Sanskrit (Journal of the American Oriental Society Vol. X.).

The first person plural termination (Parasmaipada) of the Present tenso is we invariably in Classical San-

skrit. But in the Rigved, मिस is found mero frequently by the side of मग. मिस is found 117 timos in the Rig-Veda, and 3 timos only in the Aitareya Brâhmaṇa, but never in classical Sanskrit. On the other hand, मग्र appears only 21 times in the Rigveda, 4 times in the Aitareya Brâhmaṇa and is the only ending in Classical Sanskrit. Thus it appears that the lenger ending was far in advance in the time of Rigveda, that it was evertaken by the shorter ending in the Brâhmaṇa period, and driven entirely off the field in the Classical period. (Cf. अधामिश VII. 21-1, मिनीमिस I. 25-1).

The 3rd pers. Sing, onding (Atmanepada) of the present tonse is somotimes q instead of ते; c. y. श्रवे VII. 8-4, VII. 26-4.

The Imperative and pers. sing. deservos netico. The classical rule requires fur after consonants excepting masals, mand mand in the 9th conjugation which substitutes आन ; हि after vowels (excepting आ and आ of the 5th and 8th conjugations, after a single consenant) masals, mand mand mand mand mand mand the ending is drepped. This rule is not observed in the Voda, but the ending the is mere frequently found. Examples from the 7th Mandala are,—राजापि (1-20), अपि (16-6, 25-5), अपि (22-4, 32-1). The root mandals shows the three successive stages आधि, अभि , अभि ,

The lenger endings we and are instead of wand a in the and pers. pl. are also met with in the Veda.

We also meet with in the Rigveda some peculiar forms of the 2nd pers. sing, having an imperative value, made by adding the onding fa to the root. Examples from the 7th Mandala arc--क्षेपि (18-2), मक्षि (41-2), यक्षि and नेषि (16-5).

Certain perfect participles whose stom is monosyllabic owing to the absence of the reduplication are met with; c. y. वाश्वान, मीद्वान, साह्वान,

The infinitive prosonts a great variety of forms. A number of verbal nouns in various of their cases are used in such a way as to be assimilated to the infinitive. Thus, in addition to the Classical infinitive in ax, which is, really spoaking, nothing more than the Accusative Singular form of the root-noun formed by T, we have the dativo form from the same, used as an infinitive; e. g. आश्रितये (VII. 33-1), अन्वेतये (VII. 33-8).

Infinitivos are also found with the ending तने (e. g. इन्तवे, एतथे), with the onding असे i. c. the dativo singular of the root-noun ending in अग्र (e. g. चक्षसे, जीवसे), with the ending तथे i. e. the Dative Sing. of the root-noun ending in ति (e. g. पीतये, ऊतये), with the ending ध्ये (e. g. स्तवध्ये VII. 37-1, इवध्ये VII. 43-1, वृजध्ये, हाचध्ये), with the ending ar: i. e. the Geni. Sing. of the root-noun ending in हु (e. g. एतो:, कर्तो:,) and with some more endings.

In addition to gerunds onding in an, we have those ending in लाय and ली (which is very common) ; e. g.

हत्वाय, कृत्वी, परिवी, धृत्वी.)

The subjunctive mood, whose remnant is seen in Classical Sanskrit only in the Imperfect and Aorist forms without augment, after the particle HT prohibitive, is a very frequent formation in the Rigveda, denominated us लेख by Sanskrit grammarians. Such forms as भवाति (VII. 8-6), पताति (VII. 25-1), तारिषद, जांपिपत, माव्येत, ग्रज्ञास्ते are illustrations of the subjunctive.

Noxt I may notice some peculiarities of sentence-structure. The first and the foremost feature is the position of prepositions or upasargas in a soutence. In later Sanskrit, the upasarga, as a rule, must immediately procede the verb of which it forms a part, and no word is allowed to intervene between them. But in the Rigveda the upasarga is separated from the verb by one or more words. As instances may be given the following verses from the 7th Mandala—1-4, 1-6, 1-7, 1-8, 3-9, 4-1, 8-4, 8-6, 21-7, 24-4, 24-6, 60-3, 60-4, 86-1, 86-5 and many more.

Another poculiarity is that the preposition, oneo used with the verb, is alone repeated without the verb which is implied, and the preposition alone stands for the whole verb. Instances from Mandala 7, are 1-6, 86-5. Semetimes the upasargas alone are used and the verb has to be implied, to complete the sentence, as in VII. 6-1 and 3. Semotimes we meet with paranthetical sentences having no syntactical connection with what precedes or what follows, as in VII. 1-15. Semetimes a relative sentence is used, without a corresponding correlative sentence or without a word to connect it with the correlative sentence, c. g. VII. 1-8 and 12.

LECTURE XII.

VEDIC METRE.

lieasons for the preference for motre—The meaning of the word Chhandas—The most prominent of Vedic metros stated—A synopsis of the metros of the 7th Mandala—Two schools of critics—those who maintain the text and admit metrical irregularity—those who advocate textual restoration—Textual restorations generally agreed upon—The number of syllables in foot, not the only rule—also rules of rhythm—Historical development—Four periods based upon metrical criteria.

If one casts a glanco at the Sanskrit literature in general, he will find that a very large majority of it is motrical. The epics, l'uranas, law-beeks, Kavyas are all metrical compositions. And to this the eldest Sanskrit book, I mean, the Samhitá of the Rigveda, is ne exception. And this preference for metre of the old Vedic Rishis is but natural. Fer, in the first place, the language of nature clothes itself in metre. Deep, strong passions express themselves in metre; for a metre is nething but a particular arrangement of high and low Secondly, as the Vodic hymns were composed for sacrificial purposes, with a viow to propitiate the gods, nothing could please thom better than prayers sing. Mere recitations of prose formula or lectures do net possess that attraction which naturally belongs to songs sunger hymns chanted. Thirdly, the metrical limitations served a most practical purpose, that of preserving and remombering easily what was composed, especially when writing was not in vogue. It i the experience of every one that a verse can be moreasily and more permanently committed in memory than a mere prose statement. Hence, the necessity o putting rules of grammar and whole lexicons in a me trical form. Students of Sanskrit need not be remind ed of the Karikas of grammar and Amarakosa. And the credit of preserving without corruption the Vedi texts may be largely due to the fact that they are in a fixed metrical form. Hence, the statement in Sikshá explaining the relation of Chhandas to Veda-'कृत्यः पादी त चेदस्य'—the metre is the feet of the Veda Just as a man is supported and enabled to move freely at his will, by his feet, in the same way, the Veda are supported and enabled to hold their own every where and at all times by metres.

The word छन्द्रम् is derived from चाद आहादन, from which the name चन्द्र is also derived; and who will deny that a composition clothed in a metrical form affords comparatively greater pleasure? Yáska derives the word from छन् to cover and छन्द्रम् is so called, because it is the covering of the Vedic texts. By metaphor the texts of the Veda themselves came to be called छन्द्र because their external form was metrical. Thus छन्द्र became a synonym of चद्र, and as the grammar and metre of the Veda is more irregular or rather much less regular, from the point of view of Classical Sans krit, छन्द्रम् came to mean irregular or whimsical, and

चन्भिरात्मानमाच्छाव्यन्देशः मृत्योविन्यतः तच्छान्द्रां छन्द्रस्वमू', quote from a Brahmana hy Durga on Nir. VII, 12.

the word has come down to be so used even in our vernacular.

छन्दस as I have already said in Lecture 3, is included in the six Vedángas and the oldest work at present available is the treatise of Pingala, which deals with not only the Vedic metres but with the classical metres also.

Broadly speaking, the Vedic metres are much less regular than the classical metres, in fact, there being no hard and fast rules regarding the quantity and order of the several letters, the total number of syllables being the only criterion of distinguishing one metre from another.

From the metrical point of view, the Rigveda Sarhhitá is made up of hymns or this, each of which consists of a certain number of verses or trys, and each verse consists of two or more feet, and each foot consists of a certain number of syllables.

The most prominent of the Vedic metres are-

गायत्री	8,	8,	8. *		
उरणिक्	8,	8,	12.		
पुरवाष्णक	12,	8,	8.		
ककु स	8,	1.2,	8.		
अनुष्टूष्	8,	8,	8,	8.	
बृहती	8,	8,	151	8.	
सतीबृहती	Ι2,	8,	12,	8.	
पङ्क्ति	8,	8,	8,	8,	8.

^{*} The names of the metree are followed by the numbers of the syllables in each of the several feet of which they are made up.

प्रस्तारपद्धकि	32,	12,	8,	8.	
बिरा च्	10,	10, 0	r 11,	II,	ìΙ,
बिष्टस	11,	ıı,	11,	11.	
ज्याती	12,	12,	12,	12.	

There are, of course, many sub-varioties of these metres, formed by diversifying the order of the several feet. The metres of the different verses in the hymns of the Rig-Veda arc all exhaustivoly given in the Sarvánukramani of Kátyáyana, extracts from which are, as a rule quoted by Sáyana at the commencement of his commentary on each hymn. Thus restricting ourselves to the 7th Mandala, we find that the Area metre prevails mostly throughout the book with a very few exceptions of other metres. Thus, hymns 15, 31 (1-9), 55 (1), 59 (9, 10, 11), 66 (1-9 & 17-19), 89 (1-4), 94 (1-11), 96 (4-6), 102 are nual.

Hymns 1 (1-18), 22 (1-8), 31 (10-12), 68(1-7), are बिराज् अपेकादशका; while 32 (3) is द्विपदा बिराज् (12, 8), and 34 (1-21), 56 (1-11), are द्विपदा बिराज् (10,10).

Hymn 14 (1) is बहती; while 55 (2-4) is उपरिष्टाइ बहती (8, 8, 8, 12). Hymns 16, 32 (excepting verse 3), 59 (1-6), 66 (10-15), 74 (1-6), 81 (1-6), 96 (1-2), have बृहती and सतोबृहती in alternate verses. Such pairs of बृहती and सतोबृहती seem to be denominated as भागाथ in the Sarvánukramani.

Hymns 41(1), 44 (1), 46 (1-3), 50 (1-3), 82, 83, 89 (5), 104 (1-6, 18, 21, 23) are जगती.

Hymns 55 (5-8), 59 (12), 94 (12), 103 (1), 104 (25) धार असुदूष. One hymn only i. c. 17 is दिएदा शिष्ट्य.

One verse i.e. 50 (4), is आतिजगती, also called शक्यरी (consisting of five feet having 10, 10, 11, 11, 11, sylla-

bles respectively). One verse 66(16), is पुरविष्णक (12, 8, 8). One verse 96 (3) is प्रसारपङ्क्ति (12, 12, 8, 8). And one verse 104 (7) is either जगती or निष्ठप्र.

All other verses not mentioned in the above are Agy which may be thus said to be the prevailing metre of the 7th Mandala.

It was said above that the only rule is regarding the number of syllables in a foot of the metre without any rogard to the quantity or order of the several syllables. But even this number of syllables seems to fail us now and then. Thus, for instance, where a foot ought to have 12 syllables in conformity with other feet of the same verse, it has 11, or where it ought to have 11, it has 10 and 50 on. Thus for instance, in VII. 1. 3, the first line has only 10 syllabios where as it ought to have 11 syllubles to be a foot of the Axis metre (consisting of three foet, each of 11 syllabies). Similar is the case of the 2nd line in the same verse. Now the question arises,—is it an irregularity of motre of which the Vedic poets were not vory caroful and did not observe strict regularity ? or is there some mistake in writing the text, the recitation being quite conformable to the requirements of thometre?

According to the answer given to these questions, there are two schools of Vodic crities. Some, having regard to the great antiquity and authority of the Samhith text, feel alarmed at any proposal to tamper with it, and are inclined in all cases of doubt to maintain the text and to admit a metrical irregularity. Others again recognizing the general skilfulness of the Vedic bards, propose in the same cases textual restoration. No one

of these views must be carried to an extreme or followed to the exclusion of the other. We can neither regard the text as final nor the metrical standards as holding good without exception. The principle underlying the admission of either this or that view in the present caso, is clearly quantitative. The multiplicity of instances constitutes the proof. All commentators adopt without hesitation that hypothesis which accounts for the largest number of facts in the simplest way. If one textual correction will rectify ten verses, we make the textual correction; if the admission of one metrical variation or irregularity will accord with the text of ten verses, we admit the metrical variation. Thus to decido which of these courses is to be followed in a particular case, requires a detailed examination of the text.

Thus the following textual restorations have been generally agreed upon.

(1) Where the text, in accordance with the classical rules of sandhi combines the final vowel of one word with the initial vowel of the next, final अ, अт must occasionally, and final 家, 家, ऊ, generally be read as separate syllables. Thus to take instances from the 7th Mandala, 1. 3^a पहच्च:, 1. 3^b सङ्ग्रिआ, 3. 1^d प्राथम, 8. 1^d आ आगि;, 4. 6^a, 4. 7^a, 5. 2^a, and so on.

(2) Where the text omits initial अafter final अ: or ए, the initial अ must usually he restored as a separate syllable. Thus, in the 7th Mandala, I. 4" आयो अग्निस्यो, I. 19" अग्ने अविरते, 2. 10" वनस्पते अब and so on.

(3) In numerous words and endings, the value of a separate syllable is either necessarily or optionally to

be given to य, य, of the text. Thus, in the 7th Manda-la-1.11e दुरिशास दुर्ग, 18. 12e सिखाय सस्यम्—Notice that in these two instances, the syllabic and consonantal values are found side by side: so also—15. 15°, 5. 5°, 6.1°, 5.9°, 19. 2° (हुअद्), 32.26°, 104.4°,104.20°, 104. 20d, 104. 25d and so on.

- (4) In a few words, long vowels or dipthongs are optionally to be read as equivalent to two syllables. Thus, in the 7th Mandala, 65. 1°, 86.4°, 97. 3°, we restore ज्येष to ज्यायेष ; 93. 1d घेष to घरिष ; 34. 14°, 36. 5°, 88. 1° प्रेष to प्रिष ; 40. 6d बात to बजत.
- (5) A fow words are regularly misrepresented; thus, for पायक, we must always read प्याक, for स्वानः almost always स्वानः, for स्ळय always मुळय. Thus in the 7th Mandala, we have, 49. 2 and 3, 56. 12, and 57. 5, in which पायकाः occuring at the end of the foot has to be read प्याकाः to suit the closing rhythm. So in 89. 1 and all verses, मुळय has to be read स्ळय for the same purpose.

There are other restorations also, though less certain in character. Thus,

- (6) the word द्वार has to be read as a word of three syllables, though in a very large number of cases it is a word of two syllables. Thus VII. 19.29 'तुआंद त्यदिंदर' etc., VII. 19. 6", 20. 2", 21. 5", 21-6", 22. 12, and so on.
- (7) The restoration of MAR for MR in the genitive plural of all declensions is required, generally at the end of an eight-syllabled foot. Thus—VII. 16. 2d, 16. 7d, 32, 11', 32. 25d, 66. 3b, 74. 6b and so on. Verse I. 167. 10 illustrates in one, most of those restorations.

So far we have spoken of the external form of the metre or merely the number of syllables in a foot. Indian commentators generally stop hero and hold that the internal form or the rhythm is even more irregular and free than the external, so as to he of no importance at all, comparatively speaking. Thus they say that there are no rules of rhythm at all in the Rigveda, the number of syllables in a foot being the only rule. Modern critics, however, have, from a detailed examination of the text from the metrical point of view, come to the conclusion that there is. no considerable part of the verse in which certain rhythms are not steadily favoured, and others avoided; that everywhere there exist metrical preferences. Thus, for instance, we find that at the end of a foot of 11 or 12 syllables, the last 4 syllables are very generally ---while at the end of a foot of 8 syllables they are gonerally- -- . A detailed study of this inner construction or rhythm of the foot has shown that there is a rogular gradual historical development seen through the different parts of the Rigvoda, and has enabled Vedic critics to lay down certain metrical criteria which distinguish one period of Rigveda from another. Thus, Prof. Arnold in his Vedic Metre, has arrived at four periods,. (1) the bardic period or the period of originality and rivalry between the bardic families, to which belong hymns of Mandala VII, VI, and many more, and where a greater variety of inner and external construction is observed; (2) The normal period, in which perfection cather than originality of form is the aim, to which belong hymns of Maudala III. IV. and IX, where two

tubh and Gayatri, where there is little variety but an attempt at uniformity and regularity; (3) the cretic-period where almost exclusively Trishtubh and Jagati motres are employed and the cretic-hythm is favoured, to which belong many of the hymns of the 1st Mandala and a few of the 1oth, a period of transition; and (4) the popular period the hymns of which resemble in form and character, the Atharva voda, to which belong a large number of the hymns of the 1oth Mandala, and of which, the contamination of a fagur hymn by sand stanzas is the characteristic.

Thus, the irrogularity in rhythm and the quantity of the different syllables making a foot which an ordinary roader passes by, unnoticed, is only apparent and is the result of the inventive spirit sometime loading to the construction of new and harmonious For, it is difficult to think that a professional bard should without motive have left his verse with an irrogular rhythm, when any European scholar without serious practice of the art of versification, can put it into order for him with hurdly a perceptible altoration in the meaning. Prof. Arnold thus very highly thinks of the skill and art of the Vedic bards "... As works of mochanical" art the motres of the Rigveda stand high above those of modern Europe in variety of motive and in flexibility of form. They seem, indeed, to bear the same relation to them as the rich harmonies of classical music to the simple melodies of the peasant. proportion as modorn students come to appreciate the

LUCTURE XIII.

THE AGE OF RIGVEDA.

Linguistic or literary theories—Max Müller's view that the date of Rigveda falls about 1200 B. C.—Objections to the same—views of Whitney and others—Astronomical theories—Hang's view—Dikshit's view—Tilak's view—Jacobi's theory:

No one new doubts that the Rigveda is the most ancient document of the Aryans, and that although it represents a stage of no mean civilisation, whether in' respect of the development of language, or religion, or philosophy, still to us the Rigveda represents the most ancient chapter in the history of the human intellect, what preceded that period whether in India or in any other part of the Aryan world, being lest to us beyond the hope of recovery. Notwithstanding the universal agreement in this respect, there is still a diversity of viows regarding the probable age of the Rigveda. Soveral theories have been advanced with more or less cogent arguments, but nothing conclusive may be said to have been established. On the question of the age of the Rigveda, the final word has yet to be said. propose to-day to acquaint you briefly with some of the views hold on the subject.

The materials for the re-construction of Indian chronology are supplied principally from (1) the Literatures of the Brahmanas, the Jainas and the Buddhists, (2) inscriptions on stone or copper plate, coins and seals and (3) the accounts of foreign writers, chiefly Greek,

Latin and Chineso. The question regarding the age of Rigveda can not derive any bonefit from the last two sources, on account of its extreme antiquity. Thus the only source that remains is the literary evidence, on which are based the so-called literary or linguistic theories.

The most popular of such theories is the one first promulgated by the great Vedic Scholar Max Müller, who approximately assigned the Rigveda to 1200 B. C. This date has been accepted very generally and even the very recently published book, 'Ancient India', by Prof. Rapson accepts it. The arguments adduced by Max Müller in favour of his view may be briefly stated as follows:—

To begin with, Max Miller divides the Vedic Literature into four periods, as noticed above in my Lecture 2,—the Chhandas period, the Mantra period, the Brihmana period, and the Sútra period, on the ground of the nature of language and thought, and the successive stages marked therein, every following period presupposing the existence of the preceding one. To the last or Sútra period, belong two classes of works named Anukramanis and Parisishtas. Of the authors of Anukramanis there standout two, more prominently than the rest, viz. Saunaka, who wrote Anukramanis to the Rigveda and Kátyáyana who wrote two Sarvinukramanis, one to the Rigveda, and the other to the white Yajurveda. Now if we compare these works, we tind that Saunaka writes in mixed Ślokas and takes great liberties with the metre; while Kátyáyana writes in prose and introduces the artificial contrivances

of the later Sutrus, a difference which is quite in keeping with the general course of Sanskrit literature in Iudia. Again, Sannaka's index follows the original division of the Rigyeda into Mandalas, Anuvákas and Súktus; while Kátyáyana has adopted the more practical and more modern division into Ashtakas, adhyáyas and Vargas. Both agree in following the united Sákhá of the Sákalas and Báshkalas and in excluding the khilas or supplementary hymns, but the latter has admitted the cloven Válakhilya hymns, thus bringing the total number of hymns to 1028 from 1017.

From all those indications, we are naturally led to expect that both Saunaka and Katyayana belonged to the same Sakha and that Saunaka was anterior to Katya-

yann.

From what Shadgurusishya remarks* in his commentary on the Sarvánukramani of Kátyáyana, while explaining the genealogy of the latter we can gather that there are four generations of teachers and pupils referred to, first, Saunaka, second, Aśvaláyana, third, Kátyáyuna, and fourth, Patañjali. This Kátyáyana also identified with Vararuchi is spoken of by Somadovabhatia in his Kathásaritságara, as having become a minister of king Nanda at Pátaliputra. If we can beliove in this tradition, here we got a cluo to ascertain the date of Kátyáyana.

In the Ancient Sanskrit Chronology the two dates have been fixed beyond all doubt—the date of Buddlu's death which is 483 B. C. and of the coronation of Asoka, which is 264 B. C. which are regarded as the

^{*} See Ancient Sanskrit Literature. p. 283.

sheet-anchors of Indian chronology. Chandragupta, the founder of the Maurya empire, who was succeeded by Bindusára, whose successor was the great Asoka, comes between 321 and 297 B. C. It was this Chandragupta who put down the Nandas with whom Kátyáyana is connected as minister. Thus कारवायन falls about 325 B. C.

सकाति the writer of the Vyákarana-Mahábháshya nas been now generally assigned to the second century B. C. which also, allowing sufficient period to elapse between himself and Kátyáyana, the writer of the Vartikas, points to the 4th century B. C. as the age of the latter.

Asvaláyana then would fall about 350 B. C. and क्रांनक about 400 B. C. But as शोनक's work cannot belong to the earliest productions of the Sútra-period, and as some more works after Kátyáyana must have been written during the Sútra period, the Sútra period may be supposed to have extended, broadly speaking, from 600 to 200 B. C.

The same conclusion is confirmed by a consideration of the style and language of the works known by the name of the Parisishtas which mark the last outskirts of the Sútra period. What distinguishes these Parisishtas from the Sútras is that they treat everything in a popular and superficial manner as if the time was gone when students would spend ten or twenty years of their lives in fathoming the mysteries and mastering the intricacies of the Bráhmana Literature. The tendency to make everything easy even to the extent of superficiality, leads one to think that the party

which had to follow such tactics had to fight against a strong onemy who was gaining more and more ground in the course of time. Even the adoption of the Sútrastyle proves the fact that in the opinion of the authors of the Sútras, no one would listen to wisdom unless it is clothed in a garb of clear argument and communicated in intelligible language. Thus the Sútra-period must be contemporaneous with the gradual decline of Brahmanism and the steady rise of Buddhism, a stage of thought which is distinctly reflected in the Purisishtas. From this point of view also, it follows that the Sútra-period should extend from 600 to 200 B. C.

As the Sutras necessarily prosuppose the existence of the Brálmanas whose complicated system of theology and coremonial was sought to be simplified by the Sútras, the Bráhmana-period extends backward from 600 B. C. to 800 B. C., taking about 200 years to be the minimum period sufficient for the progress of thought and literary activity, such as, the establishment of the three-fold coremonial, the composition and collection of the Bráhmanas and the ramification of the Bráhmana Charanas.

The Bráhmana-period however, exhibits a stratum of thought perfectly unintelligible without the admission of a proceding age, during which all that is misunderstood, perverted and absurd in the Bráhmanas, had its natural growth. But even between these two ages, there must have been an age when the spirit was at work in the literature of India, no longer creative, free and original, but living only on the heritage of a former age collecting, classifying and imitating.

This may be called the Mantra-period and may be surposed to have extended over two hundred years, i. of from 1000 to 800 B. C.

The three periods of Vedic literaturo spoken of so far, i. e. the Sútra, Bráhmana and Mantra periods, all point to some carlier age which gave birth to the hymns of the early Rishis—a time when the songs which were collected with such careful zeal in the Mantra-period, commented upon with such elaborate pedantry during the Bráhmana-period, and examined and analysed with such minute exactness during the Sútra period, lived and were understood without any effort,—a time characterised by spontaneity, originality and truth. This Chhandas-period may be supposed to extend over 200 years i. e. from 1200 to 1000 B. C. Thus the date of Rigveda would fall about 1200 B. C.

The unsatisfactory character of this view may be easily seen. In the first place, arguments based on the nature of language and thought are not, generally speaking, conclusive in themselves, unless they are

supported by any other independent proof.

Secondly, the theory is based upon some assumptions which have yet to be proved conclusively—e. g. the identity of the Vedic Katyayana and the grammarian Katyayana, and the historical importance to be attached to the statements of agrafica and that we which are the main planks in the whole argument.

Thirdly, there is not sufficient reason shown why 200 years in particular should be assigned to each of the periods in the Vedic Literature. We may as well assign 500 or 1000 years to each of them. And there

are other scholars who have done the same. Of course, Max Müllor has concluded his remarks with the following qualification;—" The chronological limits assigned to the Sutra and Brahmana periods will seem to most Sanskrit scholars too narrow rather than too wide, and if we assign but 200 years to the Mantra period from 800 to 1000 B. C., and an equal number to the Chhandas poriod, from 1000 to 1200 B. C., we can do so only under the supposition that during the early periods of history, the growth of the human mind was more luxuriant than in later times, and that the layers of thought wore framed less slowly in the primary than in the tertiary ages of the world." It may be seen that the estimate made by Max Miller is ridiculously low even from the point of view of the progress of language and thought. The difference of character between the Vedic Sauskrit and the Classical Sanskrit is so groat that it must have required a very long period indeed for the language to progress from one step of dovelopment to another, as may appear probable from a comparison of the history of other languages and it must be remembered that the Classical Sanskrit which we have at present has been substantially unaltered in nature and ossence since the 2nd century B.C., I mean since the Mahabhashya of Patanjali. Even Max Miller himself afterwards called this estimate too low and named the period from 1500-1200 B. C. as the period of composition of the Vedic hymns.

Similar estimates have been made by other scholars. Thus, Whitney calls the period from 2000-1500 B. C. the period of the oldest hymns—an estimate—says

Kaegi—which if we take everything into account is certainly not too high and which has the greatest claims to probability. Benfey also says:— It can hardly be doubted that the most eastern branch had their abode on the Indus as early as 2000 years before the Christian era. Weber has placed the migration into the Indus land in the 16th contury B. C.

Thus it may be seen that the linguistic or literary theories fail to fix with certainty the date of the Rigveda. As Kaegi remarks, the determination of the Vedic period...deduced...from the difference in language and in the religious and social views between the hymns and the fixed dates of Buddhism, can approximate the true period only by centuries.

But there are the astronomical theories which have anivanced the question of the Vedic age considerably and which at least possess far greater certainty than the theories merely based upon a consideration

and comparison of language and thought.

Thus Haug on the ground of a passage in the Vedanga—Jyotisha, referring to the position of the solstitial points determines the age of the Veda. The position given in this passage* carries us back to the year 1186 B. C. which must be the time of the Vedanga-Jyotisha—Dr. Haug comes to two conclusions from this reference—(1) that the Indians had made already such a considerable progress in astronomical science early in the 12th century B. C.

Rig-Veda Jyot, Verse

as to enable them to take such observations; and (2) that by that time the whole ritual in its main features as laid down in the Brahmanas was complete. Thus he assigns the composition of the bulk of the Brahmanas to the years 1400-1200 B. C. Taking 500-600 years for the Samhitá, the bulk of the Samhitá falls between 2000 to 1400 B. C. The oldest hymns and sacrificial formulas being a few hundred years more ancient still, the very commencement of Vedic Literature may be fixed between 2400-2000 B. C.

Shankara Bálkrishna Díkshit, in his 'Bháratiya Jyotihshastra' has hit upon one passage in the Satapatha Bráhmana which determines the age of the work-'एकं हे नीणि चत्वारीति वा अन्यानि नक्षचाण्यश्रेता एव भूषिष्ठा यत्कृति-कास्त्रदूमानमैवेतदुपति 'तरमात्कृत्तिकास्याद्धीत ॥ एता ह वै प्राच्ये दिशो न च्यक्ते सर्वाणि ह वा अन्यानि नक्षजाणि प्राच्ये दिशक्षवते।.....'

Satapatha Bráhmana 2-1-2.

The phenomenon that the enters were seen to rise exactly at the eastern point from which they never swerved (whereas at present they rise a little to the northern side of the eastern point), points, to a period ahout 3000 years B. C. which must be, therefore, the time of the composition of the Satapatha Bráhmana. The Taittiriya Samhita which must have preceded the Satapatha, and which also mentions Krittiká and other Nakshatras, must be about 200 years before this period while the Rig-Veda Samhita which is decisively older than the Taittiriya Samhita must be still older.

Mr. Tilak in his Orion has proved even a greater antiquity for the hymns of the Rigveda. He has endeavoured to show therein that the traditions

recorded in the Rigveda unmistakably point to a period not later than 4000 B. C., when the vernal equinox was in Orion, or, in other words, when the Dog-star (or the Dog as we have it in the Rigveda) commenced the equinoctial year.'* On the ground of the several astronomical references scattered about in the ancient Sauskrit Literature, he has arrived at four different periods. The oldest period is the Aditi or pre-Orion period, with the vernal equinox at or near Punarvasu, roughly extending from 6000 B. C. to 4000 B. C. It was a period when the finished hymns do not seem to have been known, and half prose and half poetical Nivids or sacrificial formulæ "giving the principal names, epithets and feats of the deity invoked" were probably in use. The next is the Orion period, roughly extending from 4000 B. C. to 2500 B. C., from the time when the vernal equinox was in the asteri m of Ardrá to the time when it receded to the asterism of the Krittikas. The wholo of the so-called दवाकाप hymn X.86 which is very obscure, can be at least more satisfactorily explained than has hitherto been done both by Indian commentators and modern European scholars, on the supposition that it refers to the fact of the equinoxes coinciding with the Orion. This second period is the most important period in the history of tho Aryan civilization. A good many Suktas in the Rigveda were sung at this time. This is the proper, most active, Vedic period. The third is the Krittika period, commencing with the vernal equinox in the asterism of the Krittikas and extending upto the period recorded

^{*} Tilak, Orion, Proface iii.

in the Vedanga Jyotisha, a.c., from 2500 B. C. to 1400 B. C. It was the period of the Taittiriya Samhitá and several of the Brahmanas. The hymns of the Rigveda had already become antique and unintelligible by this time had speculations, often too free, about the real meaning of these hymns and legends, were indulged in. The fourth and the last period extends from 1400 B. C. to 500 B. C. or to the birth and rise of Buddhism. It was the period of the Sútras and philosophical systems.

Prof. Jacobi also has put forth a theory according to which the period of the Rigveda goes back to at least 4000 B. C.; a theory also based on astronomical calculations connected with a change in the beginning of the sensons which has taken place since the time of the Rigveda.
